ACCOR FOLS Daily Audit Process

Objective:

To ensure timely and accurate auditing of ACCOR FOLS data on a daily basis, verifying file receipt and processing status across all properties.

Audit Schedule

- **Frequency:** Daily
- **Time:** 10:45 AM (Morning Shift)
- **Reporting:** Audit status must be reported promptly in the designated Teams channel in Excel or another clear, presentable format.

Step-by-Step Process

Step 1: Access Production Environment

- Log in to **Prod-6**.
- Navigate to the **Installation Screen**.

Step 2: Retrieve Property List

- Enter the **Client Code**.
- Click the **Search** button to generate the property list.

The screenshot shows the IDeas G3 RMS Property search interface. The 'Client Code' field is highlighted in yellow and contains the value 'ACC'. The 'Search' button is also highlighted in yellow. Below the search fields, there is a table with columns: Actions, SFDC Account #, Client Name, Client Code, Property ID, Property Code, Property Name, System Mode, and External System. The table currently shows 'No data found.'

Step 3: Export Data

- Click the 'X' symbol on the right side below the search button to begin export.
- In the export options, select '**Include System Date**' and export the data dump.

The screenshot shows the IDeas G3 RMS Property list. The 'Export Property Data' dialog is open, showing various options to include in the export. The 'Include System Date' option is checked and highlighted in yellow. The background shows a table with columns: Actions, SFDC Account #, Client Name, Client Code, Property ID, Property Code, Property Name, System Mode, and External System. The table contains several rows of data for ACCOR HOTELS and ACCORHG.

Step 4: Filter Audit Data

- Open the exported Excel file.

- Apply filters on the columns 'External System' and 'System Date'.
- Select all system dates **except the current audit date** to focus on pending or unprocessed records.

Step 5: Verify File Receipt

- Use the following directory structure link to check if files have been received in the **incoming folder**:

`/Data/SpringBoot/fols/incoming/YYYY_MM/ACCORHG/`

- Replace `YYYY_MM` with the current year and month.
- Enter each **property code** to verify file presence.

Step 6: Automate Folder Access

- Gather all property codes.
- Request ChatGPT to **generate a batch (.bat) file** that opens all property incoming folder locations simultaneously in the default browser.
- *(Refer to the attached batch file snippet for reference.)*

Step 7: Execute Batch File

- Run the generated batch file.
- This action will open all the relevant property incoming folder URLs in your browser for quick verification.

Step 8: Analyze File Status

- Confirm if files have been received.
- Investigate why files are not processed if they are present but unprocessed.
- Identify any legitimate failures.
- If unexplained failures are found, **escalate immediately to Shift Leads** for resolution.

Step 9: Report Findings

- Consolidate all audit data into an Excel or presentable format.
- Share the final audit report on the designated Teams channel promptly.

Notes

- Timeliness and accuracy are critical to maintaining data integrity.
- Always verify filters carefully to avoid missing unprocessed files.

- Escalation protocol should be followed strictly for unresolved issues.

Please ensure adherence to this process every morning at 10:45 AM to maintain operational efficiency and transparency.

In case of any queries please reach out to me.

Thanks

Sagar Bansod
