## Resolution path :

in All likelihood this chain and property is not added on NGI integration setting page for this integration.

In the case above – the chain was added onto the vendor integration mapping page as follows

| Integration Type | Vendor Id | Client Code | Property Code | Inbound Username | Inbound Password | Outbound Username | Outbound Password |
|------------------|-----------|-------------|---------------|------------------|------------------|-------------------|-------------------|
| HTNG             | Rover     | PACIFICA    | 0008          | PACIFICA_DaaS    | *****            | PACIFICA_DaaS     | *****             |
| HTNG             | Rover     | PACIFICA    | 0001          | RoomKey_PACIFICA | *****            | RoomKey_PACIFICA  | *****             |
| HTNG             | RoomKey   | PACIFICA    | 0002          | *****            | *****            | *****             | *****             |
| HTNG             | RoomKey   | PACIFICA    | 0004          | *****            | *****            | *****             | *****             |
| HTNG             | RoomKey   | PACIFICA    | 0006          | *****            | *****            | *****             | *****             |

Observe that OXI is NOT seen as an integration.  
So what you should do is simply Add the client and the property and resume the job and it should resolve the issue.  
Precautions whilst adding client  
Make sure you search for a vendor PRIOR and note that hte addition is CASE SENSITIVE . Right click existing values to copy.
