Bulk ESA Full Decision upload procedure

Precheck

Login to Prod 2 Environment.
Select all the property codes and combine them in comma separated formats
For example:
(2474,2476,2477,2479,2483,2485,2487,2489,2493,2495,2496,2501,2504,2506,2507,2509,2510,2511,2512,2513,2514,2519,2520,2522,2528)
The full upload is to be set for the above mentioned properties will be assigned in task to you.
Check whether the CDP2 optimization is completed for the properties.

Procedure:

Go to PDP screen and Select the chain ESA for which we need to set the full upload as mentioned in the image below. Typically by 7.30 am – most properties have completed their CDP’s

Ranjit on Accor Client Handling Process Guide

Mostly as of 2017 – you may be required to send full decisions to all the channels (Rezview and RVNG or more commonly called as pegs or Pegasus and following parameters would need to be updated.

=====

pacman.integration.EsDailyBarDecisionSync set to **FullRateSync**

pacman.integration.rvng.DailyBAR.uploadtype **to Full**

pacman.integration.Rezview.roomtypeoverbooking.uploadtype **to Full**

pacman.integration.Rezview.hoteloverbooking.uploadtype **to Full**

pacman.integration.Rezview.MinMaxLosByRateCode.uploadtype **to Full**

=====

OR

You may be presented with a sample Case for example: Case #02375162 Task #T06660840 Client or CRM in the mentioned case stated the Full decisions need to be upload to specific channels (Ref this should be the **RezView IUPD** decisions only).

In the above case we need to upload the Full decisions only to RezView as mentioned by CRM) the configuration parameters that enables the full to particular property can be viewed as well as updated from Outbound Data tab as mentioned in the screenshot below.

In this case we need to upload the Full decisions to Channel RezView the parameters that we need to set **to full**.

pacman.integration.Rezview.roomtypeoverbooking.uploadtype

pacman.integration.Rezview.hoteloverbooking.uploadtype

pacman.integration.Rezview.MinMaxLosByRateCode.uploadtype

Parameter Update step :

Search for the above parameter in the Search box under configuration

Click on Multi Property Edit as highlighted below.

In the multiproperty Edit Window update the Value tab from Differential to full and mention the property codes in the tab as shown in the image below proceed with clicking the Save button highlighted

Continue with all the parameters that needs to be updated as mentioned above to full, that completes the procedure to set full upload to particular channel for multiple properties of same chain.

Monitor Full decision upload after BDE

The process to monitor the Full decision to the above mentioned properties is as follows.

Go the Jobs tab, Filter the Property for which we have set the full.

As highlighted in the above screen shot shows that the BDE job with the HTNG decision delivery job has been completed successfully.

Additionally by clicking on search icon other details regarding the particular Decision delivery job can be monitored.

Once the above Job is completed revert the Parameters from Configuration tab back based on the selection that you made for the type of change to undertake (upload to all channels or upload to only rezview)

Note if changes are made for all channels for ESA

pacman.integration.EsDailyBarDecisionSync must be reverted to RateOverrideSync.

P.S:- It has been agreed with ERM that CARE will do 10 full upload tasks/cases in a day for ESA and in case we get more than 10 tasks/cases, then the subsequent tasks/cases should be completed the day next upto a maximum of 10 only.
