Component Room – Process

Overview

Component rooms are virtual guest rooms that exist only when two or more physical guest rooms are combined. These physical rooms are typically next to each other and separated by doors. If the doors are closed, the physical rooms can be sold individually. If the doors are open, the physical rooms can be sold together as a single component room. A component room can only be sold if all of its “component parts” are sold. Transaction systems account for component rooms by allowing for room types known as “Virtual Suites” or “Component Room Types.” [Here’s](#) a full article that explains this in detail.

Component Rooms:ICS Process

Data Extraction with All Roomtypes

Scenario 1

1. Before we complete the “Add Property” step the ICS team should be informed about the Component Room Types available in the PMS, so ICS team would enable the Component Room functionality for the client to complete configurations.

2. ICS completes Add Property

3. ICS completes Agent Installation [or other PMS installation process] and creates the history extract/feed and populates the extract/feed in G3

4. CPM liaises with the client and Client completes Component Rooms configuration using the Component Rooms Screen and also AMS [Component Rooms Configuration to be completed before AMS]

5. Once both the above activities are completed (CR and AMS), ICS team to complete the Rollback & Catchup/BvS/Backfill process and hand over the property back to the client to complete CCFG.

Scenario 2

Scenario 3

Data Extraction using Include Room Type Functionality For Data Extraction
