## Connectivity details

Project Heartbeat was undertaken as a key deliverable for IDeaS strategic goals and was released in April 2020. As a consequence of changes in Data model of Project Heartbeat referred to as PHB , Solution Profiles and Delivery Frameworks were decommissioned . Consequently fields that were relevant to fields that used to reside on such a solution profiles were moved to either within other objects within Salesforce or within Respective products. Example – Modules activated (that used to reside on Solution Profiles) are now available within cases for Installations. Similar field in a section loosely called as connectivity details had to be relocated as well. This document covers where users can find this information moving forward for each of the product.

### G3

Installers need to key in details in the Installation screen . This was released in Oct 2019.

Essentially users can note where and how to connect to IDeaS assets at client location, if any!

You can view this information by going to Installation > Search for your property > click on property code hyperlink and you’d land on edit property data screen. Connectivity details are present as shown below.

## G2

With SWB release on 28th May 2020 Connectivity details are now part of Config SWB .

1. Installers are expected to key these values during installation .
2. The character limit in Comments is **250** . Installers should be careful about how they use this character limit. Example don't write Username and Password – instead write UN & PWD etc.

1. Designate where the asset is – meaning is it MFDC/USDC/Sunstar/Synxis etc.

Connectivity Location Micros Frankfurt Data center

Transport Mechanism Type Data Center

Comments TLUK properties are installed in the MICROS Frankfurt Datacenter. Any issues encountered please contact your SCs/TL

NB : This data that used to reside on Solution profile has been imported as is within SWB and within G3 back in Oct 2019. Solution profiles will be decommissioned at some time in the future – but the report that was used to pull these details are available here. <https://ideas-sas.lightning.force.com/lightning/r/Report/0000M000009uoyNUAQ/view?queryScope=userFolders> . So users may find some information missing or not available – then we encourage users to correct it as they deem fit – because we have sourced it from what was treated as a source of truth.
