## 1 Introduction

### 1.1 Purpose

The purpose of this document is to explain the process of data flow in OHIP Integration.

### 1.2 Scope

The scope of this document is to explain the users the inbound and the outbound flow of data via the OHIP Emulator

### 1.3 Intended Audience

The target audience for this document is the team and the stakeholders involved in OHIP integration

E.g. – Project Manager, Project Lead, Team Members etc.

### 1.4 Abbreviation

| Abbreviation | Description                             |
|--------------|-----------------------------------------|
| OHIP         | Oracle Hospitality Integration Platform |
| NGI          | Next Generation Integration             |

## 2 Data Flow

### A – What is OHIP?

- OHIP is a cloud native integration solution provided by Oracle for Hospitality domain
- OHIP i.e., the Oracle Hospitality Integration Platform unifies, simplifies, and centralizes all interface functions and associated procedures into one cohesive platform.
- For more details refer – [pdf](#)
- For IDEaS, OHIP is used in Prod 5 or more specifically for Hyatt properties

### B – Emulator

- By using an emulator, one computer system (referred to as “the host”) can virtually mimic the operations of another (referred to as “the guest”).
- With the help of an emulator, a host system can run software programs designed for the guest system.

### C – Why is OHIP required on Prod 5 or for Hyatt?

- Initially, the PMS system and the G3 system communicated with each other through the Agent system
- For the same to work the Agent should be installed on the Oracle or the Client end.
- This type of integration would send the data as it is to the G3 database creating unnecessary load on the G3 system.
- The Agent used to share the transaction-level data to the system.

## Why the need of OHIP?

- The G3 system used to save the data, process the data & create the summary while processing the data.
- To reduce this load on the G3 database it was necessary to bring NGI into picture, but for the NGI to communicate with the Agent there was an Integration required. This integration came in the form of OHIP Emulator as shown below
- The NGI system shares the summary level data with the G3 system.

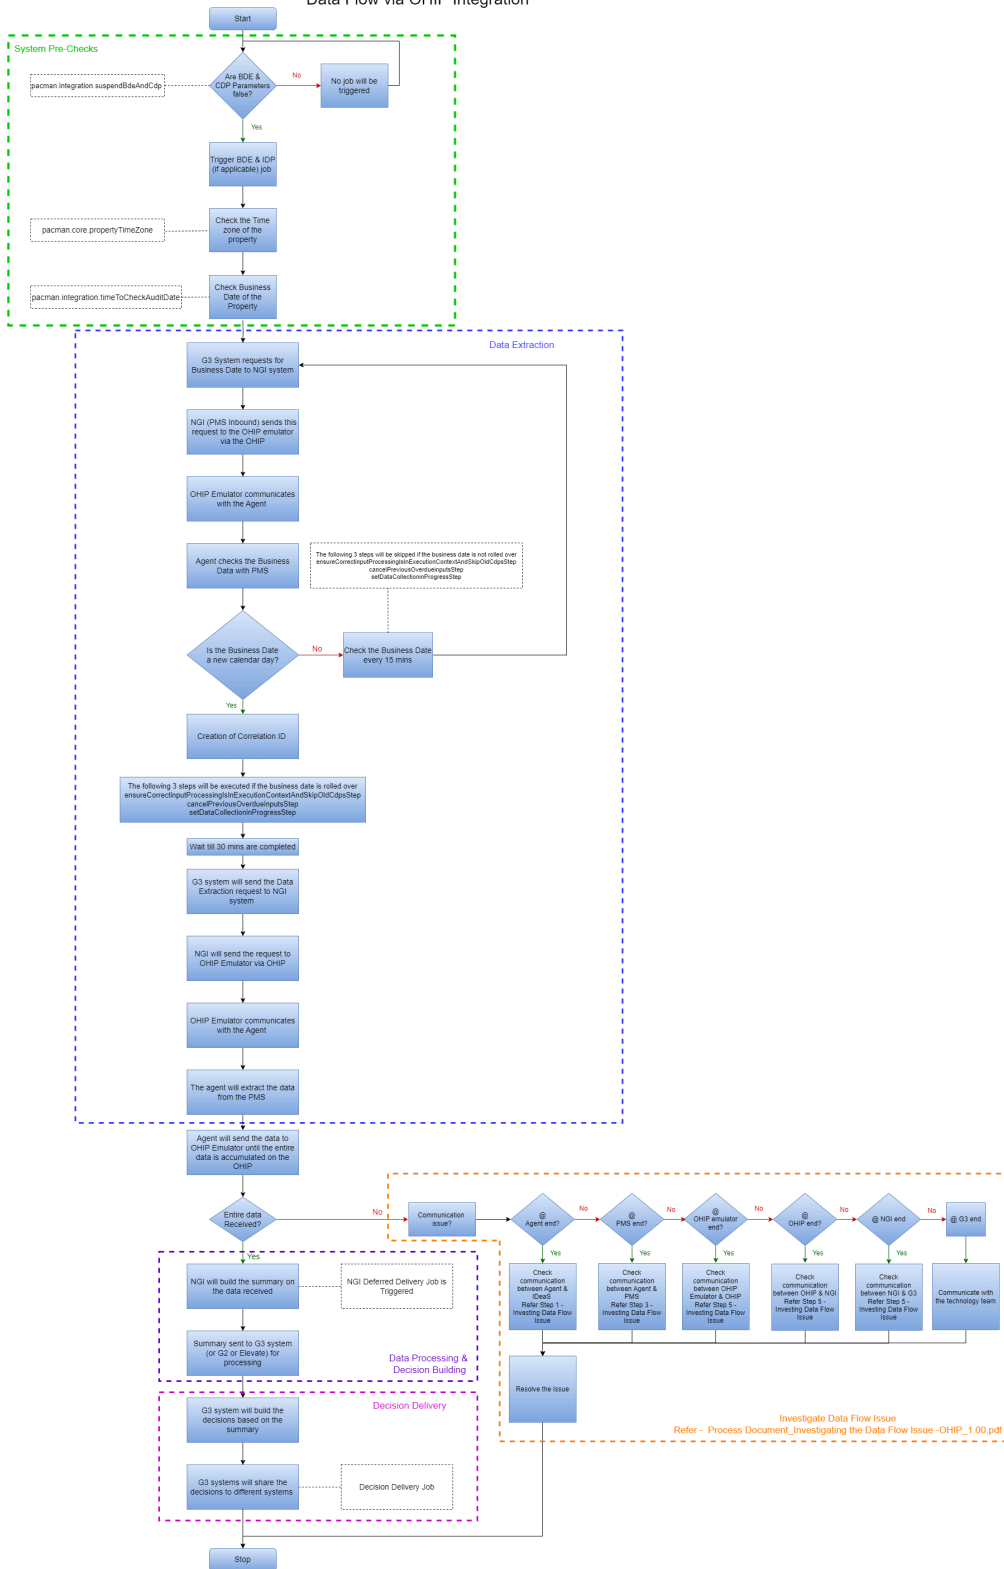

## OHIP Integration

## D – Communication or Data Flow between the system

- The data flow is as shown in the flowchart or click the following link [Flowchart](#)
