Decision Upload Configuration and Verification for Various Selling Systems

Refer to the following process: [G3: Decision Upload mechanism for Various integrations | CARE Knowledge Base \(sas.com\)](#)

Decision Upload Configuration and Verification for Various Selling Systems

Purpose

The purpose of this document is to understand the parameter changes required while configuring the different types of decisions for the different selling systems.

Outbound

The Outbound tab is used to select the types of decisions and provide the connection information for each of the property’s selling systems that IDeaS will deliver decisions.

In the outbound selected, the decision types are visible which are certified for the selected outbound only, hence it is important to configure the decisions from the Outbound Tab.

Steps to configure an Outbound System

1. Click the **Outbound** tab.

2. If the Outbound system is not shown in a tab on the screen, click button to add an Outbound system.
3. Click on the name of the Outbound system and the directional arrow to choose and move the Outbound system to Selected Outbound list in the right panel. Click OK.
4. Click on the tab with the Outbound system you want to configure.
5. Update the configuration and click Save.

By default, all decisions are '*differential*' in nature and not full except LRV. Typically, in G3 – the first decision even though differential – **will generate a full file** – however if there was a 'differential' test upload that has occurred previously this 'decision' type selection will not suffice

A formal request from Protel to change the Decision upload Process:-

1. IDeaS have agreed to replace the automatic upload of decisions, following the completion of the BDE on the scheduled date, in favor of a manual push of decisions later on in the scheduled date.
2. Protel, the client & IDeaS will jointly agree the most convenient date and time, i.e. the date and time by which each party will have completed the necessary configuration and preparation; as stated above, a manual push of decisions will be executed at the appointed time on the scheduled date. The client needs to take ownership for arranging and confirming this date by liaising with both IDeaS and the Protel Client-facing and support teams
3. **No decision upload should be scheduled unless all parties have formally agreed the date & time of the decision upload.**
4. It is recommended that a Microsoft Teams / Zoom / Webex call be convened by Protel and IDeaS Support teams in order to monitor the progress of decisions. Please note: client involvement is not required at this juncture. **The start time of this call will be confirmed by the Protel Installation team and the IDeaS Installation team will be notified accordingly.**
5. IDeaS have agreed that the respective support teams will cross-check sample dates, in order to confirm 'completeness' of the upload and to ensure that values are in synch for the sample dates, before handing over the property back to the client.
6. The client will then be required to perform a complete verification of decisions as per the normal decision upload process.
7. It may be prudent to initiate a new 'processing' following receipt of a new set of statistics manually pushed by the Protel support team. This would not be mandatory but may be initiated in the event of the decision upload taking place several hours after the BDE. This requirement can be discussed on a case by case basis by the Protel and IDeaS support teams; meaning an additional spot-check of sample dates, in the Protel PMS would be required before handing control back to the client.

Opera Decision upload Configuration

- Daily BAR (Continuous Pricing) by Room Type

- LRV by Room Type

- Overbooking by hotel and room type

Go to Outbound from Installation screen and click on + then add the Outbound as **Opera**, please refer the below screenshot.

This is a binary selection.

The green on the slider indicates that **Hotel Overbooking** and **Room Type Overbooking** is active

The green on the slider indicates that **Deltas** is active

The green on the slider indicates that Upload format is **Daily BAR By Room Type**

Update the Rate Code for DailyBAR- DAILY (as per the case comments)

Click on **Save** button

Post the above configuration please verify the parameters are set as below

Go to Support-> Configuration

Select the Tab-> Property

Select the Client (in this case –**Pomeroy Lodging LP**)

Select the Property (in this case – **Alyeska Resort**)

Click on Outbound Data

Click on Opera

pacman.integration.opera.DailyBAR.uploadtype= **differential**

pacman.integration.opera.LastRoomValuebyRoomClass.uploadtype= **full**

pacman.integration.opera.RoomTypeOverbooking.uploadtype= **differential**

pacman.integration.opera.HotelOverbooking.uploadtype= **differential**

ORS Decision Upload Configuration

Reference case 02961011 –

Daily BAR by Room Type

– LRV by Room Type

– Overbooking by hotel and room type

Go to Outbound from Installation screen and click on + then add the Outbound as **ORS**, please refer the below screenshot.

This is a binary selection.

The green on the slider indicates that **Hotel Overbooking** and **Room Type Overbooking** is active

The green on the slider indicates that **Deltas** is active

The green on the slider indicates that Upload format is **Daily BAR By Room Type**

Update the Rate Code for DailyBAR- BAR (as per the case comments)

Click on **Save** button

Post the above configuration please verify the parameters are set as below

pacman.integration.ORS.LastRoomValuebyRoomClass.uploadtype= **full**

pacman.integration.ORS.RoomTypeOverbooking.uploadtype= **differential**

pacman.integration.ORS.HotelOverbooking.uploadtype= **differential**

HTNG – Decision Upload Configurations

For the HTNG (URL Based) decision upload configurations, if the outbound is not present then use the Outbound called “**ANYHTNG**” till the time the outbound is available to use in the G3 application.

The **URL** used by the selling system vendor to deliver the decisions. For vendors that have a general URL, the default URL value for the vendor will automatically appear and you do not need to touch this input.

Username – The secure username used to connect to the selling system vendor's URL. For vendors that have a general username and password, the value will automatically appear, and you do not need to touch this input.

Password– The secure password used to connect to the selling system vendor's URL. For vendors that have a general username and password, the value will automatically appear, and you do not need to touch this input.

Siteminder Decision Upload Configuration

Reference case 02999666 –

Daily BAR by Room Type

– LRV by Room Type

Siteminder ID: IDEAS42614

Go to Outbound from Installation screen and click on + then add the Outbound as **SiteMinder**, please refer the below screenshot.

Update the property code – IDEAS42614 (as per the case comments)

This is a binary selection.

The green on the slider indicates that **LRV at Room Type** is active

The green on the slider indicates that Upload format is **Daily BAR By Room Type**

Update the Rate Code for DailyBAR- BAR (as per the case comments)

Click on **Save** button

Post the above configuration please verify the parameters are set as below

Go to Support-> Configuration

Select the Tab-> Property

Select the Client (in this case –**Pomeroy Lodging LP**)

Select the Property (in this case – **Alyeska Resort**)

Click on Outbound Data

Click on Siteminder

SynXis Decision Upload Configuration

Reference case 02961012 –

Property code 64670

Daily BAR By Room Type

Rate Code for DailyBAR = BAR

Go to Outbound from Installation screen and click on + then add the Outbound as **Synxis**, please refer the below screenshot.

Update the property code – 64670 (as per the case comments)

This is a binary selection.

The green on the slider indicates that LRV at Room Type is active

The green on the slider indicates that Upload format is **Daily BAR By Room Type**

Update the Rate Code for DailyBAR- BAR (as per the case comments)

Click on **Save** button

Post the above configuration please verify the parameters are set as below

Go to Support-> Configuration

Select the Tab-> Property

Select the Client (in this case – **Four Seasons Hotels and Resorts**)

Select the Property (in this case – **Washington DC**)

Click on Outbound Data

Click on Synxis

pacman.integration.synxis.propertycode= **64670**

pacman.integration.synxis.DailyBAR.dailybarRateCode= **BAR**

pacman.integration.synxis.DailyBAR.uploadtype= **differential**

pacman.integration.synxis.LRVatRoomType.uploadtype= **full**

pacman.integration.synxis.DailyBAR.dailybarRoundingPrecision= **2**

For the Synxis outbound, please make sure the below parameters are set to TRUE, these need to be TRUE at the **Global** level. If you find these are not TRUE then please reach out to your Shift Lead/ Team Lead/ Manager

pacman.integration.synxis.useSoapChunks=true

pacman.integration.synxis.DailyBAR.AllMessagesSentAsDelta=true

An issue was highlighted for SynXis CR whereby they were removing our rates where sent as Overlay when messages were chunked. Based on this logic only the last chunk was retained.

Decision upload Verification SynXiS

Go to the Monitoring dashboard

Select the client and the property

In this case (Client – ***Four Seasons Hotels and Resorts***) and (Property ***Washington DC***)

Check the status of the “***HTNG Decision Delivery Job***”

The Status of the job should be “**Complete**”

Open the job by clicking on the Magnifier (Refer screen shot below)

Open the **DailybarchunkedDeliveryStep**.

The status of the job should be Complete.

Open the Response String which is marked above.

It would be as below:-

Open the Data dog Application where we can check the decisions for Synxis

URL:- <https://ideas.datadoghq.com/account/login>

Click on Login with SAML

Type in the Search bar “**993441:1666**” as highlighted above

Then it would show the decisions generated for “**DailyBar**” for the property.

To Verify the decision upload on the website, we have considered a date **10th July 2020** from the above dailybar decisions for Room Type “P2D” refer below (which is from the Room class – Grand check the Rooms Configuration)

The Rate on the Pricing Screen for the Room Type P2D is **USD 930**

Open the Brand website for the property –

In this case <https://reservations.fourseasons.com/>

We can confirm that the same rate is displayed on the website

I-Hotelier Decision Upload Configuration

Reference case 03021347 –

CRS ID: 205012

BAR: IDEASBAR

Decisions:

Continuous Pricing

LRV at Room Class

Go to Outbound from Installation screen and click on + then add the Outbound as iHotelier, please refer the below screenshot.

Update the property code – 205012 (as per the case comments)

This is a binary selection.

The green on the slider indicates that LRV at Room Class is active

The green on the slider indicates that Upload format is **Daily BAR By Room Type**

Update the Rate Code for DailyBAR- BAR in this case – IDEASBAR (as per the case comments)

Click on **Save** button

Post the above configuration please verify the parameters are set as below

Go to Support-> Configuration

Select the Tab-> Property

Select the Client (in this case – **Main Street Hospitality Group**)

Select the Property (in this case – **The Red Lion Inn**)

Click on Outbound Data

Click on iHotelier

pacman.integration.iHotelier.DailyBAR.dailybarRateCode=IDEASBAR

pacman.integration.iHotelier.propertycode=205012

pacman.integration.iHotelier.LRVatRoomClass.uploadType=full

pacman.integration.iHotelier.DailyBAR.uploadtype=differential

Decision upload Verification I-Hotelier

Go to the Monitoring dashboard

Select the client and the property

In this case (Client – *Main Street Hospitality Group*) and (Property *The Red Lion Inn*)

Check the status of the “*HTNG Decision Delivery Job*”

The Status of the job should be “**Complete**”

Open the job by clicking on the Magnifier (Refer screen shot below)

Open the **Dailybar delivery Step**.

The status of the job should be Complete.

Open the Response String which is marked above.

It would be as below:-

Open the Data dog Application where we can check the decision for I-Hotelier

URL:- <https://ideas.datadoghq.com/account/login>

Click on Login with SAML

Type in the Search bar “*992252:MAINSHG*” as highlighted above

Then it would show the decisions generated for “*DailyBar*” for the property.

To Verify the decision upload on the website, we have considered a date **10th July 2020** from the above dailybar decisions for Room Type 1-2bvs refer below (which is from the Room class – Suite check the Rooms Configuration)

The Rate on the Pricing Screen for the Room Type 1-2bvs is **USD 455**

Open the Brand website for the property –

In this case <https://www.redlioninn.com/>

We can confirm that the same rate is displayed on the website

Decision Upload Considerations

Where a property is uploading Daily BAR (BAR by Day and Continuous Pricing properties) and/ or Last Room Value – it is important to define whether Tax should be Included and if it should be included – what percentage should it be set to.

There is a difference in decision deployment between setting tax to **0** vs. it being disabled (parameter value = **null**). When requesting Decision Upload – please ensure the set-up states if Tax should be applied and at what percentage

This means that the **Tax percentage** from Configure > **Property Specific Configuration** will be added to the BAR Rates, Competitor Rates and LRV in the UI, reports and system database for decision upload during the analytics processes.

Where this tax has already been added to the BAR and LRV decisions by Analytics it is very important that the appropriate Tax percentage values are active and are set to **0** in the decision upload configuration. They **should not be left blank or not configured** and they should not contain the room revenue tax to avoid duplication of tax addition or the incorrect tag (***taxinclusive vs. exclusive***) being used in the decision uploads

Please refer to the CARE Knowledgebase link below for Agile rates configuration and Per Person Pricing

<http://sww.sas.com/sites/care/agile-rates-configuration-and-analytics/>

<http://sww.sas.com/sites/care/per-person-pricing-2/>

Escalation Process

Please follow the standard escalation process within the ICS team in the event any queries, issues encountered.
