## FINDING OUT KEY CONTACTS IN SFDC POST PROJECT HEARTBEAT

### FINDING OUT KEY CONTACTS IN SFDC POST PROJECT HEARTBEAT OVERVIEW

There are 2 key areas of how Service Delivery consumes contacts in SFDC and they're as follows

- 1) Finding out who CRM/CPM/ERM for an account is
- 2) Find out who the contacts for a hotel are for certain notification types (like service outage etc.)
- 3) Find out the embedded logic for contact selection in G2/G3 email frameworks used by support teams

### INTENDED AUDIENCE

Service Delivery

### PURPOSE

The document is split in 2 parts

- 1) Define what changes with contacts and contact selection
- 2) What does NOT change and is purely informational

### STEP-BY-STEP INSTRUCTIONS

We would attempt to answer each question/query in an FAQ format so that its easier to understand context and is more relevant to the end users.

Question 1) I have a case for a property where would I find who the CPM or CRM is?

Answer 1) After Project Heartbeat – All relevant IDaaS side contacts would be available on orders. Below is a screenshot from a sandbox environment.

Greater details about how to come to this is detailed below

### Elaboration

We will take the approach of giving you equivalence between what you may be used to looking at and what you should expect

Pre Project-Heartbeat contact identification process

Typically a member in service delivery follows the path below

For CRM

Case>Account>Solution profile – Here you select relevant Solution profile> CRM

Note : You have to select the right Solution profile to understand who the CRM is.

For multi-product properties like Scandic or Four Seasons – when they were transitioning from G2 to G3 – they would have 2 ‘Active’ Solution profiles and each For CPM

Case > Account > Delivery Framework > look for relevant DF > and look up CPM name

Here’s what you should do to look at the correct order

Go to the account of the property whose CRM/CPM you want to find out.

Here’s what you’d see on some accounts based on the history of the account

It could be a very simple scenario with only one order so the answer is straight forward.

| Account                                                           |                                  |                            |                                   |                                   |

Here's what it looks like on a property with Multiple orders

Do note that you must look at the relevance of the order – if you're looking for information on smartspace – you'd be looking for a smartspace type order and for RMS (G2) the one that are highlighted below and the one that's latest.

| Order Number | Order Product Fa... | Order Type | Status    | Total Order Amount                | Order Start Date | Project Manager | Relationship M... |
|--------------|---------------------|------------|-----------|-----------------------------------|------------------|-----------------|-------------------|
| 1 00000590   | RMS                 | New        | Activated | CNY 290,925.46 (INR 2,931,608.42) | 10/21/2019       | Sean Liao       | Rick Chan         |
| 2 00000591   | Smart Space         | New        | Activated | CNY 39,589.31 (INR 398,995.02)    | 10/21/2019       |                 |                   |
| 3 00000594   | Smart Space         | Amendment  | Activated | CNY 9,394.07 (INR 94,662.51)      | 10/22/2019       |                 |                   |
| 4 00000595   | RMS                 | Amendment  | Activated | CNY 9,279.90 (INR 93,532.04)      | 10/22/2019       |                 |                   |

Question 2) BDE Extraction/Processing/Decision upload for a property has failed and I need to notify hotel about the same. What is the logic of IDEaS internal contact selection?

Answer 2 )

Short answer

Your Monitoring tool will automatically pull all the contacts for you within your respective tool. For G2 in SWB and in G3 in the respective Prod instances monitoring dashboard.

Elaboration

There are 2 types of contact emails that you would want

- 1) Client emails like IT Contact/IT CC/Primary contact . These do NOT change.
- 2) You'd want to copy a CRM or CPM on that email as well.

Tool picks order owner (as opposed to CRM/CPM from order) where Max Order Product End Date is less than today's date for the relevant (G2/G3) non draft type order.

Look at the typical path that a CPM will undertake for updating orders:

Here we can see the Order Owner, initially the person who created the Order and the Project Manager field which will be the person, mainly the CPM, who will be managing the delivery of the Order.

Once the Project Manager field is updated with a CPM name, the Order Owner changes to the CPM name in the Project Manager field.

If the Relationship Manager field is updated later with the CRM's name, the CRM becomes the Order Owner but the Order Owner field value needs to be manually changed by the CPM.

So the Order owner is defined at all times.

The Tool must now only look for non-draft types orders for the respective product with max order type value is less than today's date – so if today's date is 5th Dec 2019 and that this is less than the Max Order Product end date from the image below – which is 11th June 2020 and hence order owner of this order will be picked up – whoever that order owner is.
