FOLS PROPERTY INSTALLATION – ADD PROPERTY & CATCHUP

Add Property in G3

Refer to this process if required : [G3 Installation: Process to add a new property using FOLS | CARE Knowledge Base \(sas.com\)](#)

1. Add a new Property under client `ACCOR HOTELS`.

Client:

ACCOR HOTELS

Note- Property code to be used while adding property is “Client Property Code” excluding H

2. Once the **Add Property** Job is completed successfully, change the stage of the Property as **Data Capture Mode** in Installation screen.
3. Set the values of below configuration Parameter @Property level–

Parameter	Value
pacman.core.property.externalSystem	NGI

Catchup Property Using Utility –

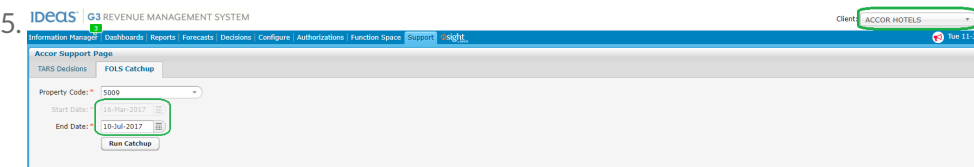

1. Login to G3 and select ACCOR HOTELS as client.
2. Go to Support -> **Accor Support Page**. This will have 2 tabs –

TARS Decisions and **FOLS Catchup**.

3. Select **FOLS Catchup** tab, the screen will look like below –

4. The Property code List will contain all the Properties for ACCOR HOTELS, select the property code which you want to catch up (say 5009).

This will fetch the date range for which the extracts are already present for

processing, please refer below screenshot –

In this case it is from 16-Mar-2017 to 10-Jul-2017.

6. Select **only 30 days** in the date range so that at a time only 30 extracts are processed per extracts.

7. This will trigger the **FOLS Catch Job** which will look like below screen shot –

8. Once the above job is completed verify the loop information, it should show the 30 of 30 complete.

9. Go to the Information manager screen for that particular property and validate the system date should be (End Date +1) of the Catch up screen.

10. Perform the step 4 to 9 till all the extracts are caught up till end date.

Important Notes:

1. **Do not** start catchup for same property unless the already running FOLSCatchupJob is completed for that property.
2. For any property selected for catchup, **run only 30** extracts at a time.
3. At max run FOLSCatchupJob **only for 4 properties**. Select next set of properties once previous 4 properties are done.

How to handle FOLS catchup failures:

Below scenario of FOLS catchup is to be handled by CARE team.

For the rest of FOLS catchup failure escalate to Raman team at the earliest.

This is because we have strict timeline to move with the catchup and give system access to the client.

Email address-(IDeaS G3 Raman) and contact via lync to Rounak Taunk (09168882323) and Mohammad Hasan Khan (09168882323).

Below type of FOLS catchup failure is expected to be handled by CARE team-

You can check FOLS catchup job status under Job section of Monitoring Dashboard-

Go to details of the failed job and in the Execution Parameters tab check for dateStart and dateEnd and make note of it

Then check status of all job for the property. Status of latest NGI Deferred Delivery Job should be completed and you will see FOLS catchup job failure for the property.

Go to details of the latest completed NGI Deferred Delivery Job and in the Execution Parameters tab check for fiscalDate. Make note of it.

Further check whether the extract with same date as that off fiscalDate has been moved to the archive location. This can be done by going to below link and inside respective month folder-

<http://us2pngiap01.ideasprod.int/NGI/Data/NGI.Springboot/fols/archive/>

Note-Fiscal date plus 1 day is your system date. Now check system date of the property. If system date is plus 1 of the Fiscal date and extract has been moved into archive then we can safely abandon the FOLS catchup job.

You now need to re trigger the FOLScatchup of the property and monitor it further.

Update the excel sheet kept at location : T:\Working\Temp.All\RPhatak\FOLS\UK-Properties\New UK Schedule.xlsx .

Note : Below is the EPM schedule that shows looks up the entire project in greater detail and is strictly informational.

EPM schedule file-

http://ideas.na.sas.com/CS/Enterpriseteam/Accor/_layouts/15/WopiFrame2.aspx?sourcedoc=/CS/Enterpriseteam/Accor/Shared%20Documents/ACC%20-%20FOLS%20Installation%20Timeline.xlsx&action=default
