FOLS – Support Matrix for IDEaS G3 RMS Exports

Below is an overview of agreement with Accor and IDEaS and summarizes key aspects of support to Accor properties that use FOLS integration

Frequency of exports

EN	• Full Files: sent once during the export activation process and should be the first file received by IDEaS. Steps to be followed are: 1. Add or update the export configuration for sending to IDEaS 2. Generate the FULL export using the manual export process (this will automatically upload the file to IDEaS through the usual Web Service) • Daily Files: one file is expected per day. The files are generated at the closure of the business day when the night audit is run in FOLS PMS - o In the <u>event</u> of a file which was not received by IDEaS for one day, a manual export for one day using the current hotel date need to be regenerated using the manual export process (this will automatically upload the file to IDEaS through the usual Web Service). <u>This should be done within the same business day</u> to maintain pace point validity - o In the <u>event</u> of multiple files that were not received by IDEaS for two or more consecutive days, or one missing daily could not be regenerated

- [HLTN/Handling Error for SAS Dataset Encoding Job](#)

during the same business day, one unique manual export need to be generated to be generated from one day prior to the first missed date until the current hotel date, using the manual export process

§ Eg. If on June 6th the support team intervene on missing dates for the 3rd and 4th of June, the export date should go from June 2nd to June 6th

o **Please note:** If multiple files are presented on a single business day and work is required to clean-up these files or to clean-up data in the IDeaS solution this is a chargeable activity so it is imperative that this process is followed carefully to avoid any negative impacts on the IDeaS solutions.

Support Subjects and Responsibilities

EN Export initialization:
The export setting should be done by FOLS Data Admin Team, who is also in charge of sending the initial FULL export to IDeaS.

Incident on FULL export:

IDeaS is responsible for confirming that the FULL export was correctly received

If it was not received, the analysis of source of the error will be done by FOLS Support Team, which can escalate to Level 3 support within Accor to look at logs data.

If it appears that the PMS runs out of memory when generating the “FULL” export (known issue) the work-around are, by preference order:

1. Upgrade the FOLS server and retry
2. Contact local IT team and ask them to retry
3. Clone the PMS in a stage environment with additional memory and retry from the virtual machine

Daily export monitoring:

The FOLS Support Team will not monitor the delivery status of extracts; IDeaS is expected to monitor and escalate any instances where extracts are not received IDeaS by sending an automated e-mail to the FOLS Support Team (see escalation process below) and an alert will be posted within the IDeaS G3 RMS solution, noting that the system is not up to date due to a missing extract (or missing extracts).

Incident on DAILY exports:

If IDeaS has detected that the system is not up-to-date and that the daily export files were not imported:

- If the export was generated but did not send: unfortunately FOLS does not retain these extracts so it must be re-generated, without possibility to investigate the origin of the error
- If there was an error in generating the daily export, the errors will be reviewed by the FOLS Support Team, in addition of regenerating the missing daily file
- If the export was sent to IDeaS but not processed IDeaS teams will investigate the failure

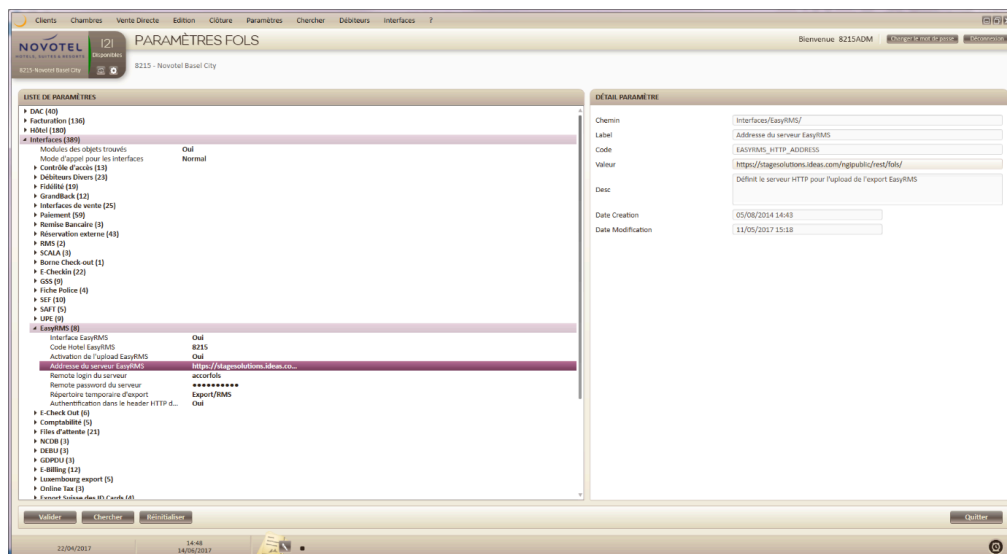

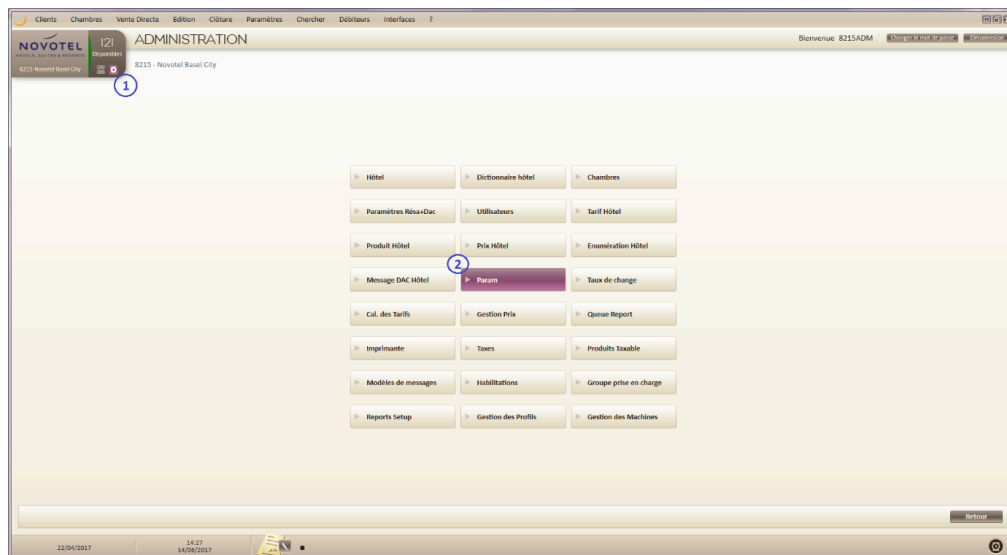

Support Escalation Considerations

EN	• Support tickets will be automatically created by the emails sent from IDeaS G3 RMS. These will be sent as From: Care@IDeaS.com To: SUPPORTN2IPMS.EXPORTS@accor.com • Currently the ticket system will not send back the incident number to IDeaS • FOLS and IDeaS G3 RMS Users can follow-up with the FOLS Support Team for updates being investigated by the FOLS Team • FOLS Support can respond to the emails by writing to Care@IDeaS.com, not forgetting to add icare@IDeaS.com in CC on these emails • FOLS Support Teams will send a single file covering missing days. This must be dated as the current day and not as if it were provided on a past business day - o E.g. if the files did not generate for Saturday 1-Jul-2017 and Sunday 2-Jul-2017 and on Monday morning, Accor Teams re-generate a “MANUAL” extract which starts on 30-Jun-2017, the Date and Time Stamp in the File Name and in the General.XML file should contain the current date and time (i.e. Monday 3-Jul-2017) • If the missing dates are not in succession a single export which runs from one day prior to the first date missing to the current hotel date must be sent - o E.g. if the 1-Jul, 3-Jul and 10-Jul are all missed, IDeaS expects to receive one file, with a date and time stamp of “today”, starting from 30-Jun-2017 • FOLS Support Team members will need access to IDeaS Information Manager Dashboard by Region to be able to view any failures across multiple properties. User rights are managed directly by Accor and can be requested to the RUN RM team or Colin Jones • Support for decision upload from IDeaS into TARS is out of the scope of this document and will be managed between IDeaS, TARS Line technical support team and the RUN RM functional support team
----	--

Export to IDeaS settings

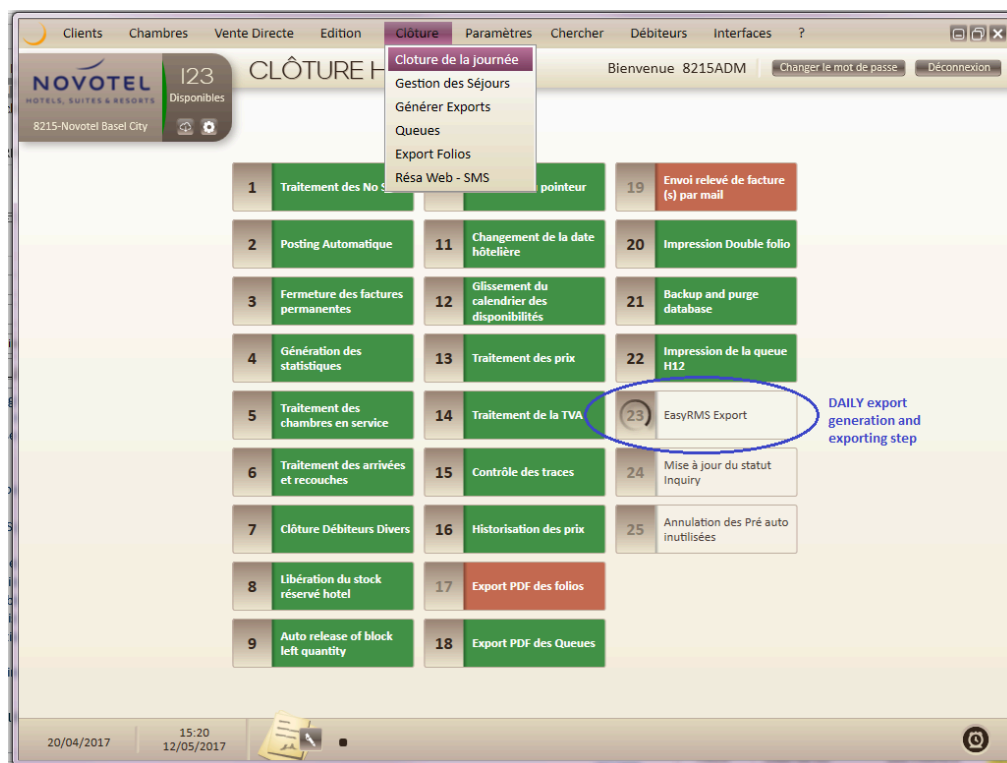

EN	The IDeaS export is configured using the “Management” > “Param” menu, going to entry Interfaces > EasyRMS or SmartPricing Setting should be as follow: • EasyRMS Interface: Yes • Hotel EasyRMS Code: Accor RID code for the hotel – this must exclude the H e.g. H0996 must be entered as 0996 • EasyRMS Upload mode activation: Yes • EasyRMS Server Address: https://ngi.ideas.com/ngipublic/rest/fols/ (do not forget the final slash)
----	---

- Remote server Login: **accorfol**
- Remote server password: To be communicated on request
- Export temporary folder: Leave default value (C:\temp\Exports for example)
- EasyRMS upload authentication in HTTP header: **Yes**

Export How-to DAILY

EN Daily export is generated and sent automatically during the night audit process: End of Day > Night audit

FULL

EN	History “FULL” export is generated and sent by using the manual export feature and selecting the “FULL” option: End of Day > Export Generation > Choose EasyRMS > Choose Full option
----	--

MANUAL

EN	“MANUAL” export is generated and sent by using the manual export feature, not selecting the “FULL” option and choosing the start and end dates: End of Day > Export Generation > Choose EasyRMS > Choose export dates
----	---

Activation Process Over view

EN	The diagram bellow shows the activation process as agreed between Accor and IDeaS. <u>Please note:</u> If the FULL file is not successful initially, or if additional history is provided later (e.g. 1 year is provided initially and later a FULL file is generated), this must be discussed with the IDeaS Project Manager to ensure that any data clean-up or process changes can be accounted for.
