G2 to G3 Rate Shopping Transition- OTA Insights

Overview

This document gives us an overview of the configuration part involved during a Rate shopping transition (G2 to G3) for OTAInsights. This process is applicable 'only' if the vendor can provide two feeds for a limited period.

Purpose

This document gives us an overview of the configuration part involved during a Rate shopping transition (G2 to G3) for OTAInsights. This process is applicable 'only' if the vendor can provide two feeds for a limited period.

Procedure

CPM:-

Follow the standard RateShopping casework and ensure below tasks/comments are in place-

- 1. 'RS#1 – GFT Properties configuration': Update Task Subject Line by 'Configure G3 RateShopping- OTA Insights'

Update Case comments by-

G3 RMS Rate-shopping Transition

Property Code (DUMMY ACCOUNT):- G3 Client Code-last 4 digits of AccountID (example MINOR-0001)

Note:- Please do not modify G2 RateShopping configuration

Update Task comments by-

Team,

Please configure the property on G3 RSS OTA Insights via G3 Standard Process (JENKINS)

Property Code (DUMMY ACCOUNT):- G3 Client Code-last 4 digits of AccountID

2.'RS#2 – Email and Request form dispatched'- CPM to ensure that they inform OTA Insights that CARE has completed the G3 Rate shopping configuration and are expecting the G3 feeds with the Dummy AccountID and same Vendor Property Code as G2 RMS.

3. 'RS#3 – Population of Shopping file'- Update Comments-

As per the process and the form attached to this case, please populate the first G3 Feed with Property Code (G3 Client Code-last 4 digits of AccountID) and sanity check – Set DO UPLOAD=TRUE.

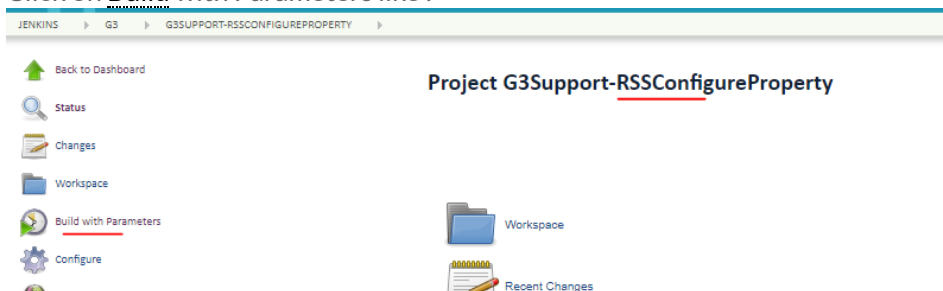

Upon completion of this task, please assign task RS4# back to the Case Owner.

And continue with the rest of the workflow tasks.

ICS:- Please read the case/task comments before executing the tasks.

G3 – RSS Configuration

- This is divided into 2 key tasks.
 - RS#1
 - RS#3
- **RS#1:** To complete Add RateShopping Configuration RS#1 tasks go to the Jenkins job for G3Support-RSSConfigureProperty [here](#)
- Click on Build with Parameters like :

- You would then be re-directed to input details on a screen like below. Please ensure you key in the correct information and they are as follows.

Project G3Support-RSSConfigureProperty

This build requires parameters:

Application 1

Please Select Appropriate Rate Shopping Instance.

DropZone 2

Please Select Appropriate G3 Dropzone.

PropertyCode

Please Enter Property Code/Property Account ID whichever is applicable.
E.g. HMSPA (For Hilton - Prod01)
E.g. 9999-9991 (For ESA - Prod02) 3

PropertyName

Please Enter Property Name. 4

extractFilePattern

Please Enter Rate Shopping Extract File Pattern.
E.g. Hilton-HMSPA*RSS.zip (For Hilton - Prod01)
E.g. 9999-9991*RSS.zip OR 99999991*RSS.zip whichever is applicable (For ESA - Prod02) 5

6

- Application: Select **RSS16**– This is the vendor where the property must be configured
 - Drop Zone: Select- **ESA**
 - Property Code: Enter- ‘**Chain Code- Last 4 digits of AccountID**’
 - PropertyName: This should match the name of the property as on its account page
 - Extract File pattern: Enter ‘**G3 Client Code– Last 4 digits of AccountID**’*RSS.zip
 - Review this information again and make sure this is inserted correctly. Once found to be correct – click on the **Build** and monitor the Job.
 - If the Jenkins job is successful we can say RS#1 is completed
 - If Jenkins Job is unsuccessful or Failed
- **RS#3:** The first step is to check if we have received the extract for this property. To verify this information you should go to the [index page](#) and then search for your property.
- Do you see a file?
- Yes
 - There are 2 steps to configuration
 - IDaaS G3 application configuration
 - If you see a file open the file and check the property code as shown here

- This will be denominated in the G3 application later as ID (backend parameter: pacman.bar.webRateAlias)
 - Also, collect the vendor name as outlined in the RSS (**Rate Shopping** file) as shown here

- This will later be denominated later as Source (backend parameter: pacman.bar.webRateSource) in the IDaaS G3 configuration for that property.
 - What is the Chain for which this configuration is being completed and where's it configured?

- Prod2
- Log in to the appropriate application
<https://g3rms.ideas.com/solutions/monitoring-dashboard#/>
- Prod3
 - Log in to the appropriate application
<https://g3rms03.ideas.com/solutions/monitoring-dashboard#/p10047>
- Once chain selection in the correct G3 application is completed and you're logged into the correct chain
 - Go to Support > Installation – Select the appropriate chain and property.
 - Click on CoreSettings and go to 'Licensed Modules and features'
 - Search for Rate Shopper Vendor
 - Click on the dropdown and select the Vendor- OTA Insights
 - Update the ID (Property Code or alias)
 - Hit save.

Important Note: if you do not fill in this information prior to running the catchup Jenkins job – the job will fail.

- **Jenkins job execution and monitoring for catch up**
- Go to Jenkins G3Support-RssExtracts-Catchup [here](#)
- Click on **Build**

with Parameters: Inputs would be as follows :

- Fill in all the details relevant to the Job as follows :
 - Instance_Name – *glb2205ext*
 - application – *RS#16*

- G3 Client code & G3 Property Code: *Fetch this information from Installation > Property > in the "SFDC Account #:" end account ID from SFDC and the result will return the chain and the property code. Copy and insert that in the Jenkins job input field.*
- PropertyCode: Enter- 'Chain Code- Last 4 digits of AccountID'
- ExtractPattern: Enter 'Chain Code- Last 4 digits of AccountID'*RSS.zip
- DropZone: Select ESA
- Collect the 1st date from where you want to start the catchup from. So if you typically see a lot of extracts on the rate shopping index page – and that they're not processed – they should be brought to the drop zone for catchup. So this date is critical – and you should collect its year/Month information from the extract name and select the correct dropdown in the Start_Year and Start_Month fields.
- Keep the G2G3_Migr parameter as No.
- Review all these selections carefully once again and then Build this job.
- Monitor the job. Typically this should be successful if all information is correctly keyed in.
- You can also monitor these jobs in the G3 application under Support>monitoring dashboard>jobs. This will take some time to process – depending on the number of RSS extracts in the dropzone.
- To verify whether this was completed correctly – go the G3 application and verify if rate shopping information is populated in different reports/screens.

■ No

- Has it been more than 3 days that the Rate Shopping file is not received?
 - Yes
 - Please return the task to the case owner and advise that rate shopping file for the property was not received and that the vendor needs to issue the files to IDEaS.
 - No
 - Please wait up to 3 days from last confirmed date of receipt of extract OR communication from vendor/hotel/PM
