G3 Auditing property configurations

You can compare property configuration with respect to a known good configuration of another property from within the same chain or another chain.

This can be accomplished by using a query by the name **'getConfigParmaterValues'**. You must give the property ID as an input for the query to generate an accurate list of its configurations.

The steps are outlined below.

Identify the property ID

To run an audit of all parameters configured for a property in G3 with another property one must first pull the property ID of the following :

1. Of the property that you want to audit
2. **Also** of the property ID of a known good configuration

You can find out the property ID by going to Support>Installation>Property screen
