G3 CP Configurations for New properties (Based on Pricing Configuration Inclusive of Tax_QuickRefDoc)

This process is part of the Pricing Configuration Inclusive of Tax/Supplements. Refer to the document link below:

[Pricing Configuration Inclusive of Tax_QuickRefDoc.docx](#)

Posted By:	Lisa Hong
Created:	31 Mar 2020
Last Update:	31 Mar 2020 (LH)

Overview:

Pricing Configuration allows you to define the range of unqualified rates that G3 RMS can choose for Best Available Rate (BAR) decisions, for specified seasons and room types. It is important that you accurately share your price strategy with G3 RMS, so the system can pick from the correct range of prices. G3 RMS must know the rates that are appropriate for sale for a given arrival date and day of week in each season.

Implementation Process:

Toggle Name:	pacman.feature.ContinuousPricing.TaxInclusiveConfiguration
--------------	--

In the above document, click on the ICS Configuration link under the Configuration sub-header. A case request will be opened after which the team member should use the steps mentioned in the process below:

CP Configurations for New properties:

There are following steps if we want to enable CP for properties:

- Enable continuous pricing feature: set “pacman.feature.isContinuousPricingEnabled” to true. Below is the snapshot for reference.

- Tax Configuration- Please review the casework and based on the comments, update the tax configuration settings.

If the case comments says, tax inclusive pricing, then activate the below parameter pacman.feature.ContinuousPricing.TaxInclusiveConfiguration to turn ON this functionality.

And if the task comments says Tax Exclusive, then don't touch this parameter

- BAR settings: set below parameter based on snapshot:

pacman.bar.EnableSingleBarDecision set to False

pacman.bar.barDecision set to RateOfTheDay

- For RT movement data cleanup, feature “pacman.feature.isPricingConfigurationEnabled” – needs to be set to true.

- Analytics: in New_Feature table set (new_feature.sas7bdat) “continuous_pricing” feature status ID to 1.

Go to path C:\SAS\Data\Properties\<Property ID> open file ‘new_feature.sas7bdat’ and edit mode and set 1 for feature_status_id.

- Roles – Provide Read/Write permissions to client admin role so that client can use the feature.

We need to give Read/Write permission for module Continuous Pricing Management under decision and Pricing Configuration under configure. Below are the snapshots

For Continuous Pricing Management screen: highlighted in yellow

For Pricing Configuration: highlighted in yellow
