G3 CP Tax and Supplement Internal

Tax-Inclusive and Non-Room Supplement-Inclusive Continuous Pricing

Feature Review

Operations and Pricing-Related Configurations for a Tax-Inclusive Property, with no Non-Room Supplements

When a property is set up for Tax-Inclusive Pricing:

- The BAR value that is calculated by analytics, stored in our data mart, and displayed on G3 Screens and Reports is Tax-Inclusive.
- The Last Room Value figure that is calculated by analytics, stored in our data mart, and displayed on G3 Screens and Reports is Tax-Inclusive.
- The Revenue Values calculated by analytics exclude Tax (so occupancy * price will be > revenue). This will affect Revenue, ADR, and RevPAR.
- Rounding is applied to tax-inclusive Final BAR
- Overrides entered by the user are assumed to include taxes
- Room Tax is added to Competitor Rate figures in the UI (for this reason, it is important that properties use the Rate Adjustment Configuration, which removes tax figures before these values are stored)

Operations and Pricing-Related Configurations for a Property with Non-Room Supplements

When a property is set up for Pricing with Non-Room Supplements:

- A new BAR value is available on the CP Pricing Management screen: Room Only BAR – this figure represents the portion of Final BAR that doesn’t include non-room supplement. If the property is set up to be Tax-Inclusive, then this value will include tax.
- The BAR value that is calculated by analytics, stored in our data mart, and displayed on G3 Screens and Reports is Tax-Inclusive, and supplement inclusive. *G3 Analytics do not consider non-room supplements in any way – all processing of this feature takes place outside of analytics.*
- The Last Room Value figure that is calculated by analytics, stored in our data mart, and displayed on G3 Screens and Reports is Tax-Inclusive.
- The Revenue Values calculated by analytics exclude Tax (so occupancy * Room Only BAR price will be > revenue)
- Rounding is applied to tax-inclusive and supplement-inclusive Final BAR

- Overrides entered by the user are assumed to include taxes (if applicable) and non-room supplements. Since Room Only BAR is calculated by subtracting the supplement from this override, the price override UI ensures that BAR overrides are > non room supplement values to ensure that BAR is a positive value. Users are also warned if the value that they enter is outside of the configured ceiling / floor range.

Configuration	Should be Entered...	Notes
Non-Room Supplements	Tax Inclusive	Final Price for Supplements needs to be inclusive of tax applied on the supplement.
Minimum Change Value	Tax Inclusive	Since we only support fixed non-room supplements, this value is not affected by non-room supplements
BAR Rounding Rules	Affects Tax- and Supplement-Included Values (Final BAR)	Final BAR values are rounded after application of both Tax and Non-Room Supplements
Ceiling Floor Values – <u>Group</u>	Tax Exclusive and Supplement Exclusive	Non-Room Supplements are not supported for <u>Group Pricing</u>
Ceiling Floor Values – <u>Transient</u>	Tax Exclusive and Supplement Exclusive	Tax and Non-Room Supplement amounts are added to Ceiling / Floor when determining the available range for Final BAR
Occupancy and Non-Base <u>Room Type</u> Offsets	Tax Exclusive and Supplement Exclusive	<u>Room Type</u> and Occupancy Offsets are applied first, then Room Tax is applied before Non-Room Supplements. Each Non-Room Supplement value is then added to the respective RT/Occupancy value. Finally, we round this figure, and calculate “Rooms Only” BAR by subtracting the Non-Room Supplement value.
Ceiling Floor Values – <u>Transient</u> {for Price Excluded RC's}	Tax Inclusive and Supplement Exclusive Tax Inclusive	Supplement value is then added to the respective RT/Occupancy value by the solution.
Occupancy and Non-Base <u>Room Type</u> Offsets {for Price Excluded RC's}		
Minimum <u>Room Class</u> Price Differential	Tax Exclusive	Since we only support fixed non-room supplements, this value is not affected by non-room supplements

Other Notes:

The ceiling / floor values on the BAR Override Popup currently come straight from the configuration – so these values are Tax- and Supplement-exclusive, even though the value that the user enters is “Final BAR” so their entry should include those values. UX is looking to add display of the supplement value to this popup. **Should we simply display this range as a “Final BAR” range in this popup – even though the user enters it exclusive of these values?**

Change to Supplement value invalidating BAR overrides: it is conceivable that a user could 1) override BAR for a day (or more), and then subsequently 2) go to their Supplement configuration and increase the supplement to the point where Room Only Bar is negative. The solution does not check for this, and we don’t remove overrides when a user changes the value of their supplements. **Should we remove overrides when users increase the value of supplements?**

As noted above, **price excluded** room classes and their RT’s are being treated as a “special case” – configurations for these will be assumed to include Tax (but not non-room supplement values).

As noted above, we add the configured room tax to the competitor rates prior to display on the UI and reports – so it is very important that the property use the Rate Adjustment Configuration to remove them, or they will be over-inflated.

A user can adjust the Tax configuration for a property on the Pricing Configuration screen. If the tax % is set to 0, then the tax configuration is set to “off”.

A user can set the Supplement configuration for a property on the Pricing Configuration screen. If the checkbox is selected, and then “saved”, the tab for supplement entry appears. Supplement amounts are added on that tab, and the “Rooms Only” BAR values will now display by default in the Continuous Pricing Management screen.
