G3 RMS – Invalid Yield Category Decision Upload Failure

Opera Failures : Component Rooms | Yield Categories Configuration in Opera

The Yield Category in Opera PMS should correspond to the Room Class names in G3 RMS for the respective Room Types in general.

However, if we are activating Component Rooms Module for a property, we need to make sure that a Yield Category is created per Room Type and each Room Type is assigned to the Yield Category of the same name by the client.

It is required to configure for each room type (all existing room types) instead of Room Class. If they are already configured per Room Class, configure new Room Types in the Yield Category column and then delete the existing ones from Opera.

For Accor: The Yield Categories codes created in the PMS must match with the codes available in MyHOD (TARS). The code in IDeaS must then match with PMS and MyHOD.

Impact: If we do not have yield categories per room type for a Component Room-enabled property, we'll face decision upload failures.

This is already updated in existing SFDC case work-flow.

Below format for NEW EMAIL TEMPLATE as part of 8.0.1 release

Dropdown Template Name – Invalid Yield Category Decision Upload Failure

Email Subject Line – CHAIN CODE/PROPERTY NAME- IDeaS G3 RMS – Invalid
Yield Category Decision Upload Failure – DD Month, YYYY

Mail Body:

*****Mail Body Start*****

Hello <Client Name>,

This is to inform you that we are facing issues while uploading decisions to
<Outbound Channel Name> for the property <Property Name>.

While uploading decisions we have encountered below failure.

*****ERROR*****

-----<ERROR>-----

If your property is NOT Component Rooms Enabled, then please use the below steps
to investigate and correct the issue:

1. The room class are setup as Yield Categories in your <Outbound Channel
Name> (along with the same room type mappings).
1. The Yield Category names are exactly matching with the Room Class present in
IDeaS G3 RMS. (case sensitive).

In case, if your property is Component Rooms Enabled, then please use the below
steps to investigate and correct the issue:

1. Instead of creating a Yield Category per Room Class, it is created per Room
Type and each Room Type is assigned to the Yield Category of the same name.
1. Each room type (not Room Class) is setup as Yield Categories in your
<Outbound Channel Name> (along with the same room type mappings).
1. The Yield Category names are exactly matching with the Room Types present in
IDeaS G3 RMS. (case sensitive).

Could you please review the above and make the necessary changes and update us
accordingly?

We could then re-instate the decision upload and update you on the same.

Thank you for your co-operation. Please do not hesitate to contact us for any queries.

Following are our contact details:

- IDeaS Client portal
- Email us at CARE@ideas.com (addressing the CARE team)

Thanks and Regards,
