G3 Restrict Past Days in Vendor Configuration

During PMS MIGRATION /Manual intervention instances , for example Centara chain Vendor Past days information should NOT be updated. Hence a new toggle was introduced to prevent users from accidentally changing these values.

Introduced toggle name : pacman.vendor.isVendorPastDaysRestricted
Default Global value is : False

Override at client or Property possible
When Value set at True – Signified to G3 that Past Day is restricted and should not be changed
Vendor Config past days would be disabled from edit for anybody from UI
For user : When they encounter a True value they should be careful .Experientially this field should not be available to the user to edit consequently.

When value is false : Signifies user can change vendor past days if required.

Currently Once this toggle is made available – it'd be likely consumed by PMS migration flow for Rahul S andteam to consume in development
For all Manual intervention PSS team will be responsible for implementing restriction.

Background Details –

We have several properties that have completed PMS migration and as per the process, once the property is migrated to new PMS, past days should not exceed the PMS cutover date.

If the past days go beyond the PMS cutover date, this can have a significant impact on the data and the only option to correct is to restore the property on prod.

We understand that SvD teams may get Data Discrepancy cases for such properties and in order to get the discrepancy resolved the team may extend the past days from Vendor config.

We do not have any such information that will warn the team that this property has gone through PMS migration or any other activity which will have an impact on extending the past days.
Currently, for PMS migrated property we have a fail-safe to avoid any team doing a rollback and catchup for such properties. However, we do not have any such restrictions on extending the past days parameter in Vendor Config which might have a similar impact on the property data.
