G3 Step to Change Product configuration (ESA Only)

Step to Change Product configuration ESA Only –

The ESA-Extended Stay decisions functionality need the extended Stay product configured in system so as to compute the rate value by each product level. We have already done this configuration for all ESA properties through backend. To view these configuration we have provided screens to client in read only mode. There might be situation where client might want to change the configuration for some properties. CARE team will have read write permissions on those screens.

CARE can perform following actions on that screen.

1. Change the Default Room type.
2. Change the rate code assigned to a product.

To Change the default Room type

1. Open Configuration à Extended Stay Configuration screen.
2. Select Product configuration tab.

3. Default Room type name would be present which was selected for that property.

4. Select the appropriate room type for the drop down list.
5. Select Edit button for each product and save it without changing any value in that row. Please note if default room type is changed then user must edit each product.

6. Room type information will not be reflect in system unless product row is edited and saved.

To change the Rate code assigned to product

1. Open Configuration à Extended Stay Configuration screen.
2. Select Product configuration tab.
3. Press edit button next to the product for which rate code needs to be updated.

4. Change the Rate code name and press save button.

5. If User do not want to save the changes then process cancel button next to that row.

To crosscheck if the room type information is updated in system. User can verify the same by following steps

1. Open Decision menus -> Extended Stay Rate Management screen.
2. Once the screen is open, user should be able to see the default room type used by system. It should reflect the newly selected room type.
