G3 Step to enable JAVA Rate population functionality

Step to enable JAVA Rate population functionality –

This feature takes care of resolving the rate overlap issue happened due to IDEaS SAS rate population code.

This functionality do not resolve the overlapping rates coming from CRS extracts (Tar.Z). Please refer separate document for turning on “Last One wins” functionality.

To turn on the JAVA rate population below are the steps.

1. Open Configuration screen
2. Under Feature toggle à Pre-production folder
3. Set the value at the client level (Unless decided to turned on for specific properties)
4. Check for property level overrides, user may want to delete if it is decided to turn on this feature at client level.
5. Set parameter feature.RatePopulationJavaEnabled= TRUE

pacman.PreProduction.ReCreateTransDataEnabled	false	false	29-Jun-2015 11:20 AM	⌵	⌵	⌵

- Along with this parameter there is one more parameter which needs to be set for HILTON chain because they take BARFPLOSBYRANK decisions.
- Under Feature toggle à base
- Set parameter pacman.feature.RateUnqualifiedRankingEnabled = TRUE (For HILTON)
- This parameter should be FALSE for ESA as we do not populate unqualified rates there.
- This feature is applicable **only** to Hilton and ESA.
