G3 VENDOR MAPPING OVERVIEW AND PROCESS.DOCX

G3 Vendor Mapping Overview and Process.docx

Overview

Decision Upload configuration is currently handled by ICS team. They’ve setup the Decision Upload URL, along with credentials (username and password) at the Global (integration level) for Selling Systems, like SynXis, SiteMinder, iHotelier.

Whilst we (CPM) initiate the discussion with the client on any HTNG decision upload, it’s important that we confirm whether the room types in IDeaS G3 RMS and Selling Systems (HTNG) match and if they don’t match then we need to ensure that client completes the Vendor Integration Mapping in G3 RMS.

Vendor Integration Mapping: –

G3 RMS can only send decisions to your **selling systems** if the room types and rate codes in the selling systems match the ones in G3 RMS. If a room type or rate code doesn’t match, use Vendor Integration Mapping to tell G3 RMS which code in the selling system is the matching one. This way, when G3 RMS sends decisions, it knows to which rate codes and room types in the selling systems the decisions should be applied.

For most of our clients, Vendor Integration Mapping is not necessary. That is because, even in the rare case of non-matching Room Types, the **selling systems**

allow you to map the codes in their system instead of in G3 RMS. Completing the mapping in the selling system allows the data to interface.

Intended Audience

CPMs

Purpose

The purpose of this document is to create awareness within the CPM Team about **Vendor Integration Mapping**.

Why?

We've had cases in the past wherein Vendor Mapping wasn't completed, and this delayed the decision upload, so it's important that we understand the functionality and advise client to map RT's wherever required.

When?

If a room type or rate code doesn't match, use Vendor Integration Mapping to tell G3 RMS which code in the selling system is the matching one.

Step-By-Step Instructions

Login to G3 RMS – Prod2 or Prod3 (based on where the property is configured)

Map Room Types

1. Point to .
2. In the Decisions section, click Vendor Integration Mapping.
3. Select the Vendor for which you want to complete Room Type Mapping.
4. Click Add Room Type Mapping.
5. Select a room type code from the Room Type menu.
6. Type the room type for the selected vendor in the Vendor Room Type field, exactly how it appears in the vendor system.
7. Repeat the steps above until all Room Types are mapped for that vendor.
8. Click Save.
9. If you have multiple selling systems, continue selecting vendors and mapping room types until you have accounted for all your selling systems

ESH	EAM	
SKM	SKM	
SKM	DKM	

Map Rate Codes

1. Point to
2. In the **Decisions** section, click Vendor Integration Mapping.
3. Select the Vendor for which you want to complete either **Rate Code** Mapping.
4. Click Add **Rate Code** Mapping.
5. Select a **rate code** from the **Rate Code** menu.
6. Type the **rate code** for the selected vendor in the Vendor **Rate Code** field, exactly how it appears in the vendor system.
7. Repeat these steps until all Room Types are mapped.
8. Click Save.
9. If you have multiple selling systems, continue selecting vendors and mapping rate codes until you have accounted for all your selling systems.

Add Rate Code Mapping

Rate Code	Vendor Rate Code	
DAILYBAR	AXICENT2	

Scenarios for Using Mapping

Room Type Mapping

Room Type Codes: Use **Room Type** Mapping if G3 RMS is sending **room type** level **decisions** for your property, and any of these scenarios apply:

- The number of room types in G3 RMS does not match the number in the selling systems. For example, you have seven room types in G3 RMS but less than or more than seven in a selling system.
- The **room type** codes used by G3 RMS do not match those in the selling systems. For example, your PMS has a “DBL” **room type**. G3 RMS uses the same name, because it’s getting data from your PMS. But in your selling system it’s called “1D”.

Mandatory Room Upgrade: The client has offered a rate that includes a complimentary upgrade that is already configured in the selling price.
(Amex/Centurium)

- A second **rate code** needs to receive **decisions** from a different **room type**. For example, for a **rate code** that requires a mandatory upgrade and a price for a

higher value room type must be sold at the price of the next lowest priced room type, like Amex Centurion.

Rate Code Mapping

Restrictions: Use Rate Code Mapping if G3 RMS is sending BAR by Day rate code level restrictions for your property, or if G3 RMS is sending BAR by LOS decisions, and any of these scenarios apply:

- The rate codes from the PMS do not match the codes for the same rate plan in one or more of your selling systems. For example, the rate code “BCOMBAR” in the PMS is coded “BDCBAR” in your CRS.
- All the rate codes do not exist in the selling system. For example, the PMS has ten rate codes, but only five of those codes exist in the CRS.
- Vendor Integration Mapping for Your PMS/CRS

Opera-based additional Daily BAR Decisions: if your property uses the Daily Continuous or BAR by Day pricing method and it’s Opera-based (OPMS, ORS or MyFidelio), there are a few scenarios when you need to complete the mapping:

- Your property has set up a second-rate code (other than the Opera daily BAR rate code) and both rate codes need to receive Daily BAR Decisions. This should be a rare scenario, since the rates can be derived (i.e. the Daily BAR Rate code -0).
- The Daily BAR rate codes between any of the following systems don’t match: ORS, OPMS, MyFidelio.

Mapping the Codes in the Selling Systems

Many selling systems allow you to map to the codes from the reservation system that provided G3 RMS with the room type and rate codes. In these cases, room type or rate code mapping is not required. If you are in doubt, check with the support contacts for your selling systems.

In this example, the PMS is the reservation system and the CRS is a selling system that allows the below mapping:

<u>PMS Room Type Code</u>	<u>Room Type Description</u>	<u>CRS Room Type Code</u>	“PMS Code” in Selling System for Mapping
STDBL	Standard Double	SD	STDBL
EXDBL	Executive Double	ED	EXDBL
EXTWN	Executive Twin	ET	EXTWN

Mapping Examples

Rate Code Mapping

In this example, the number of rate codes is the same in the PMS (the reservation system) and CRS. Mapping is required because the codes are different, and the selling system uses the CRS, not the PMS rate codes for integration. In Vendor Integration Mapping, select the PMS rate code, then enter the equivalent CRS Rate Code.

<u>PMS Rate Code</u>	<u>Rate Code Description</u>	<u>CRS Rate Code</u>
BCOMBAR	<u>Booking.com BAR Rate</u>	BDCBAR
EXPBAR	Expedia BAR Rate	EXPBAR
FLEXRO	BAR for Direct Channels	BAR

In the example above, if G3 RMS was required to send MinLOS restrictions to BDCBAR, the BCOMBAR rate from the PMS would be mapped to the BDCBAR rate code used in the CRS.

In the next example, some rate codes match exactly, but not all exist in the CRS. The PMS and CRS receive rate code MinLOS restrictions from G3 RMS. There are five rate codes to receive restrictions in the PMS, but only three of these exist in the CRS.

In this case, configure the mapping for only those that exist in the CRS, and restrictions will be generated against these.

In Vendor Integration Mapping, select the PMS rate code, then enter the equivalent CRS Rate Code. You can apply this mapping either with or without room type mapping.

<u>PMS Rate Code</u>	<u>CRS Rate Code</u>
BCOMBAR	BCOMBAR
EXPBAR	EXPBAR
FLEXRO	FLEXRO
CORP	(Not Mapped)
CORP10	(Not Mapped)

Room Type Mapping

You might need to map a one-to-one relationship between room types or rate codes between G3 RMS and selling systems. However, you can also set up a single G3 RMS room type or rate code to map to several rate codes or room types in your selling systems (for example, if multiple room types should receive the same decisions). For example, Room Type A in G3 RMS can be mapped to Room Type B and Room Type C in a selling system:

Room Type A = Room Type B

Room Type A = Room Type C

You cannot send decisions from multiple room types or rate codes in G3 RMS to a single selling system room type or rate code. For example, Room Type A and Room Type B in G3 RMS cannot both be mapped to Room Type C in selling systems:

Room Type A ≠ Room Type C

Room Type B ≠ Room Type C
