G3 – DO NOT Monitor

G3 Do not monitor features is now available on the G3 UI under the property’s core setting section.

Earlier a user would have to set G3 property system parameters as follows – but now instead it is a far more intuitive process by simply selecting do not monitor start and end dates.

You can set the Do not monitor for any property by going to

G3>Support >Installation > Select your property > Core settings > set the dates .

The screenshot shows the 'Core Settings' tab for a property. The 'Do Not Monitor Configuration' section is highlighted with a red box. It contains two date pickers: 'Do Not Monitor Start Date' and 'Do Not Monitor End Date'. Below these are 'Save' and 'Cancel' buttons. To the left of this section, the 'Daily Processing Monitoring Enabled' toggle is turned on (green). The top of the page shows various tabs like 'Property Summary', 'Client', 'Vendor', etc., and a 'Back To All Properties' button.

Caution : Daily Processing Monitoring Enabled – should typically **never be “turned off”** in principle. When a user does that the property is completely removed from the monitoring cycle and not limited the period that a user may typically want to put the property in Do not monitor state which is principally shown in the diagram above.

Also please be aware that Problem screen will always generate an exception for a failure – but the discretion to choose whether to issue notifications for that or not – resides with an end user. The email issuance framework prompts the end user to consider this before issuing emails.

The screenshot shows the 'Problem' screen with a table of issues. A modal dialog titled 'Send Mail Warning' is open, asking: 'Property 0003 of Client ACCOR has System Mode set as Do Not Monitor. Email should not be sent for a Property with System Mode - Do Not Monitor. Do you still want to send an email?'. The dialog has 'Yes' and 'No' buttons.
