G3 – Find out how many extracts a property has processed historically

How to check how many extracts a property has historically processed?

- This would be applicable for both Prod1 as well as Prod 2
 - Go to Support > Installation > select the tab property .
 - Select the client and then search for property by either selecting the name or ‘searching’ for it.
 - The result should give you a row that details the property specifically .
 - Click on the property code and that should generate a pop up that displays various details. Should look like this

- Look for a field by the name Processed BDE Activity Count .
- This number denotes the number of BDE extracts have been processed – and directly corresponds to how old a property has been with IDEaS. so properties that have Processed BDE Activity Count number which is greater than 1000 means that the property is nearly 3 years old if you’re looking for an extract file for such property – you will have to raise a data restore request with Techops as outlined [here](#)

CROSS VERIFICATION :

Find out the oldest extract that must be populated VIA CMA

- PROD 1
 - Go to Prod 1 CMA
 - Go to SQL
 - Search for a query by the name “Find the Start Date for a property”
 - This should give you the date on the oldest extract that was processed
- PROD 2
 - Go to Prod 2 CMA
 - Go to SQL
 - Search for a query by the name “Get 1st snapshot date “
 - This should give you the date on the oldest extract that was processed
- If this date nearly matches with the date found in the application – then you can raise the request for retrieval with Techops.
