G3 – How to identify the Build of the property

Hi Team,

This article will help you identify the Build of the property.

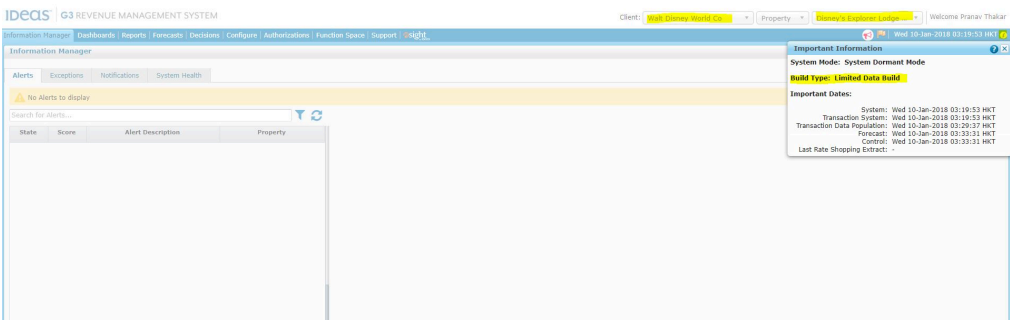

Currently, we have the following Build Types;

1. Standard.
2. Limited Data Build.

The simple way is to access the property UI.

- Access System date status information.
 - Click on the ‘i’ symbol.
 - The build type will be identified there.

In the below screenshot, the Limited Data Build is the build type.

Similarly, we can check for Standard **Build**;

One more way to identify an LDB property is as follows;

1. Click on Support Tab.
2. Open Configuration.
3. Enter the Client and Property Name.
4. In the Search tab, enter *pacman.core.LimitedDataBuildEnabled*.
5. If the Parameter is set to 'True' then the property is LDB.
