G3 : How to resolve – “Not enough leg demand memory allocated” type errors

Typically for Hilton GRO (G3) proeprties the following steps fails :

Step Name : BDEOptimizationServiceStep

Problem Description :

Error:Not enough leg demand memory allocated : Error:Error running optimization

Steps to resolve this issue are as follows :

1. abandon the job.
2. enable Webrate Sync .
3. Run the Sync and complete it successfully.
4. re-run the same file from installation status screen.
5. It may still happen that the extract may fail in optimization, but in that case as the sync is run the optimization has already updated the decisions. Hence, you may go ahead and continue this step so that the decision upload goes through.
