G3 – How to resolve a rare agent scenario where agent is not triggering the Opera Data Feed Job.

Last week we encountered a vary rare scenario for a Radisson Property **CTVA / CPTRR – RR Capetown**.

– Radisson is an OXI client but we have CTVA which is an agent property.

What was the scenario?

=====

20th Oct 2020

- We observed data feed creation issue where the DB connection was unsuccessful and accordingly it was further escalated to client
- Client investigated the issue and resolved the DB connection issue. However, post that the scheduled Opera Data Feed Job was not triggered.
- When we tried to manually request the feed the system did not allow us with an warning “Cannot request feed for property CTVA: Ineligible because there is a pending or In-Progress Get Audit Date task for this property“
- But when we check the Remote Task for the property agent ID 1114 we did not find any GET AUDIT DATE TASK running.

22nd Oct 2020

- We took the connectivity of the agent machine and restarted the services, but this did not help in resolving the issue.

- We also checked logs and could not find anything other than entries of GET AUDIT DATE TASK.

- On the same day we observed multiple (200+) Opera Data Feed Jobs were triggered suddenly.

- We abandon all the jobs which were stuck in step “acquireRegulatorRequestStep”

- Only one job was kept which already went ahead of acquireRegulatorRequestStep eventually this job got the system processed.

=====

Now here we have 3 questions.

1. Why it did not triggered the scheduled opera data feed job also why it was also not allowing us to trigger an opera data feed job manually?

ANSWER –

1. Due to multiple request on tenant DB it went into deadlock mode.
2. On agent side a GetNextPropertyTask runs every 5 minutes the purpose of this job is to find if there is any task scheduled for agent.
3. As soon the audit time happens this GetNextPropertyTask will trigger a GET_AUDIT_DATE task for agent.
4. Now due to deadlock the GET_AUDIT_DATE went into pending state.
5. Again after 5 minutes when the GetNextPropertyTask ran he find no GET_AUDIT_DATE task is live (as the previous one was in pending state due to deadlock) so he again triggered GET_AUDIT_DATE task which also went in pending state, like wise this was happening in a never ending loop.

2. What made the agent to trigger 200+ Opera Data Feed Jobs?

ANSWER –

1. When we restarted the service by taking the connectivity.
2. All this GET_AUDIT_DATE got a push and trigged Opera Data Feed Jobs one each. This was the reason 200+ Opera Data Feed Jobs were triggered.

We abandoned all this Opera Data Feed Jobs but in the Remote Task table the status of this task were still pending.

This was the reason it was not allowing us to trigger an Opera Data Feed Jobs manually and it was giving warning “**Cannot request feed for property CTVA: Ineligible because there is a pending or In-Progress Get Audit Date task for this property**”

3. Why the remote task were not showing in Remote Task tab.

ANSWER –

As mention earlier in this document Radisson is set as OXI client at client level this is the reason the remote task are not been showed in Remote Task tab on UI for this agent property.

What Action was taken to resolve this.

At our end in Remote Task table for this property we marked all the pending task as completed as soon as we did that the agent allowed us to trigger Opera Data Feed Job.

In future if you encounter this kind of issue please get in touch with your TL, M escalation team member or open a G3 SPM M escalation so that we can get the pending remote task marked as complete from QA.

Note – Now we have a CMA query **Check Opera Remote Task Stats** this will allow us to check the remote task of agent property for which the client is set as OXI at client level.

Query gives 2 outputs – 1 will show the count by Task Type and 2 will show top 100 records of what is pending.

How do we take the action mentioned in the Resolution part? Do we escalate to the QA team to mark the pending tasks as completed, or do we have a query in CMA for that as well?
