G3 – Mass mail notification

Mass mailing functionality

- This is a **new Insight feature** that will help issue emails in instances where we experience large scale issues. Our hope is that we never use this – and that this is a good to have feature. This should carefully be evaluated per standard SPM operations whether its accurate to issue client communication and advise of potential delays or outages due to certain technical issues. We trust the SPM team to take the call based on their operational procedures.
- This video aims to walk the viewer with the procedure to use the Mass notification feature that is available in Insights for G3 properties.
- It is important to note that for G2 properties the features resides with its monitoring tool , which is called Support Work Bench and is ‘differently housed’ than this tool.
- There are 3 major substeps to issue an email.
 - Filter the right set of properties to whom you wish to issue an email
 - SPM user will have to make a choice of properties to whom this communication is to be issued.
 - they can use filters like
 - System Mode
 - Regions
 - Inbound
 - Features function
 - The fast forward buttons indicate select all from the selection criterion
 - The forward > arrow buttons when hit will ‘chosed’ the selection made in the previous panel – which is highlighted by grey

- The back < arrow when hit will remove the selection made and send the item selected back to the filter criteria
 - The fast backward will deselect all entries and helps you restart on the selection criteria .
- Once you've made selection on all the areas – you should hit submit.
- The submit button will take you to the next screen where you can select Impacted
 - Chain
 - properties
- NB : You can specifically select which properties should receive a notification.
- Once finalized hit 'Get contacts' or Reset the filter to further correct the selection here. This will make sure you get an opportunity to review your work here rather than having to redo the selection made in the previous screens
- This should return you to a page that allows you to review 'all the selection' you've made so far. From here you can either move to
 - Compose mail
 - Copy Contacts
 - You should be extremely cautious with this . This is for ease of usage and noting down information. If you issue emails – make sure you BCC contacts copied from here and DO NOT Copy contacts if there are users from multiple chains present on the communication.
 - Reset the filters
 - This will take you to square 1 and you'll have to make your selection again from scratch.
- Compose email
 - Once you've finalized your contacts – its time you compose the emails. There are 4 major aspects. You should remember that the one composing the email – cannot issue the email and that this email should typically be peer reviewed and hence the user is required to get an approval from a senior member. Even if you're a senior member in the organisation – you would still need to run this with another member of your team who in turn can issue this for you . This ways we would de-risk ourselves and protect against erroneous issuance. Next steps are as follows
 - Filter name : You can give a name of your choice – it will be suffixed with your user id – today date and time.
 - Subject : Email subject that you'd like to issue to the users. Be careful – Do not use chain codes in the description which is a very standard practice. Typically mail failure emails begin with IDeaS/ followed by the general description of the issue and the date.
 - Message : Type out your formal communication here. Be extremely cautious with the verbiage here. No casual linguistic devices should be used or informal references. Notice that such email would be typically for multitude of clients .
 - Action buttons
 - Preview
 - You can hit this button to preview the email
 - Reset filters :
 - This will take you to square 1 and you'll have to make your selection again from scratch.
 - Sent for review

- There's a box next to this button where you should enter the email address of your peer reviewer. Typically you should notify them that you're going to send such a request in advance so that they can quickly review it. Note : Incorrect email will ensure the reviewer does not get anything to review . Its pivotal you enter right email address to have the right person gets it. Do NOT enter a client email address here. Because that will issue such an email to someone else. Also you cannot self review. Importantly – you should be able to search all of IDeaS members really quickly if you just simply typed their name. You can then hit 'send for review'. Your job is over at this moment. The peer reviewer will now get an email to consider your request. The mail once issued will look something like below :

didnhefina6.apac.sas.com:8443 says
Mail is successfully sent only for review. Please ask reviewer to review and send it to all the clients.

OK

- Mail review and issuance
