G3 – Monitor by Exception Charter

Process to monitoring

- Description
 - Monitoring for G3 product is done on 2 UI's which are as follows: Note that the processes conceptually are similar – however given different technologies are used and the setup is based on client infrastructure – the resolution steps on each item would be different and representative for that ‘type’ of integration .
 - Prod1
 - This instance or URL is where all of Hilton properties are installed. This was a business decision that was taken as there are nearly 3K +(3000+) properties that subscribe to this product. This is even today a very large number of properties . Also separating the UI's improved the overall performance on each UI
 - Prod 2
 - This instance or URL is where ‘all’ Non-Hilton properties are installed. Many people will refer to this instance as GA (G3 GA – GA is General Availability). This is the environment where new properties are being installed. Major clients installed on this instance are as follows :
 - ESA (Extended Stay America)
 - Opera properties
 - Scandic
 - Four Seasons
 - CRHGROUP – Carlton Rezidor Hotel Group (This is the largest non Opera / OXI installation)
 - Accor (2nd Largest non Opera installation – FOLS)

- Monitoring is split in two screens – Monitor by Exception & Problems.
 - Important Note Exception is an alert that are actionable , however for example – failure to create extract due to IO exception would generate a ‘problem’ however, BDE night audit failure to extraction will ‘not’ generate a problem and would appear as an exception – however it does not mean that it does not require care to action this. NOTE : CARE is able to ‘count’ problems only but ‘not’ exceptions
 - Introduction to Monitor by Exception :

Exception Conditions for Clients: All		PROPERTY PHASE/STAGE						
Exception Condition	N/A	Decision Delivery Mode		Decision Creation Mode		Data Population Mode		System Passed Mode
AGENT_ALIVE_OVERDUE	0	0	0	0	0	0	0	0
BDE_RECEIVED_OVERDUE	0	0	123	1	0	0	114	0
BDE_COMPLETED_OVERDUE	0	15	92	22	3	3	0	0
CEP_RECEIVED_OVERDUE	0	2	0	0	0	0	0	0
CEP_COMPLETED_OVERDUE	0	138	28	18	0	8	0	0
FAILED_AGENT_TASK	0	0	0	0	0	0	0	0
FUNCTION_SPACE_COMPLETED_OVERDUE	0	0	0	0	0	0	0	0
PROBLEM	1	0	1	0	2	1	0	0
ISSUE TYPE								

- Screen is logically divided into 2 sections
 - Columns
 - These vertical columns represent the state that a property experiencing the issue is in. Meaning say a property X is in Decision delivery mode and experiencing an issue then it would appear in the column that reads Decision delivery mode. These are generally referred to as the phase/mode/stage of the property.
 - More information about what each mode means is available [here](#)
 - Different modes and their brief meanings
 - A full video of a detailed explanation is made available [here](#)
 - System Preparation Mode
 - –System is built, no data is populated in the G3 RMS
 - Data Mapping Mode
 - Includes properties for which we are populating data, prior to AMS attribution
 - Data Population Mode
 - Includes properties that are populating extracts AND have completed the AMS attribution
 - Decision Creation Mode
 - Includes properties that are processing on a daily basis and display ‘recommendations’ generated by IDeaS in the G3 application – for the client to verify this information – but ‘NOT’ upload to client systems.
 - Decision Delivery Mode
 - This implies that the property processes daily extracts and issues recommendations to various channels that a property subscribes to.

- Rows
 - This describes the general 'nature' of the failure and is broadly categorized into the following sub categories
 - AGENT_ALIVE_OVERDUE
 - This is a section that captures all properties that are currently 'not' communicating with IDeaS servers whence they're installed on an Agent. Typical action to resolution would be to send an email to client indicating that the Agent is 'not' communicating with IDeaS servers. A sample of that copy is placed [here](#). The possible reasons are as follows :
 - PC is down
 - IDeaS Agent service is down/stopped
 - Network issues on the Hotel network preventing outbound connections
 - Proxy server change/ Firewall changes to Hotel Network resulting in termination of all outbound traffic.
 - Once you have issued the communication add this to your handover is G3 Wunderlist entry for G3 Opera.
 - This occurs in broadly 2 types of client environment. The way you can determine this information is by looking at the field PMS Location in the 'active' solution profile of the property in SFDC .
 - Data Center Environment
 - These properties are installed in the Micros Data Center and IDeaS CARE Shift Co-ordinators have access to these servers .
 - If you find out if a property has a heartbeat issue/still alive issue/Agent alive issue – then reach out to a CARE Shift Co-ordinator for assistance. A good check would be to see if there's an ongoing maintenance in the given Data Center and a communication is issued by them

already indicating of the downtime. In such cases you would 'not' contact them or issue notifications. However if there's no maintenance ongoing and there's a Agent alive issue for the property – notify a Shift Coordinator immediately and they will resolve it.

- Hotel Environment
 - Typically hotels install Agents within the Hotel network and they've access to the Agent machines. They can access those machines /make changes/reboot/rest art services and change credentials etc.
 - Once client fixes connectivity issue – typically they would inform IDeaS via responding back on the email (issues initially by IDeaS) and advising of steps they undertook .
 - In most cases this would be resolved by an Agent service restart.
 - Verification step:
 - You should upload logs by going clicking on the number under the NA column of the AGENT_ALIVE_OVERDUE section like [here](#) and it will redirect you to the list of properties that are experiencing this issue. You can also go to this screen by going to Support

>Installation>

Opera
Agent.This
would like this
below

. Note . You
should
typically sort
the last
heartbeat
column to
show you the
latest issues.
An unsorted
Last heartbeat
column will
not give you a
representativ
e issue that
are current.
Additionally
You also have
the ability to
'request' logs .
Click on
actions and
request logs .

- Upload of a log indicates that the communication is restored. Also as an outcome this exception should parse/removed from the exception screen.
- Check if any scheduled extraction is missed for the property – otherwise you can add request feeds from the same screen.
- Cross verification (The G2 equivalent is

Monitor
Search) can be
done via the
Jobs menu.
The last job
completed
should give a
fair idea about
the status of
the system OR
if you want to
know in
certain – you
should go to
Installation

- BDE_RECEIVED_OVERDUE
 - This section highlights properties where an extract is pending to be received. The G2 equivalent is 'Extract not received' in SWB.
 - Note : you will see exception here for 'all' types of integrations
 - First step > include columns processing date on the top right hand side. & current property time.Sorting automatically completes with Processing date.
 - Note – if you click on the property code and go to data loads if you see the following counts in the completion status – you can determine the integration
 - For opera – 14 out of 14 feeds
 - For HTNG- 8 out of 8 feeds
 - For OXI 10 out of 10 feeds.
 - Typically some feeds would be in progress in some of the properties that are highlighted here and you should wait for all the jobs to complete however if the jobs are not moving – request logs for Opera.
 - For non Opera integration if feeds are not created simply issue communication for non receipt of extract.
 - Opera

- For opera these would be instances when extraction job has run only partially or has not completed or is stuck on a single step and not moving to the next step (due to possible network connectivity issues). Note 14 sub files are created to make 'one' feed . Common observations are listed as follows :

- Issue types
 - Extracti on/Feed job is stuck in the initial phases of feed creatio n and this could indicate a likely credential change . You can request an upload logs from this screen via actions or via Support >Install ations> Opera Agent> Request logs

- OXI (work in progress)
 - 10 files make one feed.
 - Extraction is triggerred on the client side by a scheduled job called RTAV , which is scheduled by the OXI installer
 - Not receivevd RTAV
 - Not receive d RTAV messag e
 - Incomplete feed
 - 3/10 or 5/10 if feeds receivv ed under data loads ask client to resent entire RTAV/fe ed
 - Night Audit
 - Check busines s date in data loads feed – if busines s date >= current date/to day – then no issues – but if its lesser means night audit not complet ed and ask client to

complete
night
audit

- HTNG (work in progress)
 - 10 Files make one feed.
 - Not received Summary Statistics
 - Not received Summary Statistics message
 - Incomplete feed
 - 3/8 or 5/8 if feeds received under data loads ask client to resend entire Summary Statistics
- BDE_COMPLETED_OVERDUE
 - 6 components out of 8 are present – 2 NGI should trigger – but cannot – so an issue – need to go to QA
- CDP_RECEIVED_OVERDUE
 - Issues appearing here follow the same troubleshooting steps as in BDE received overdue – but only for a CDP type process
- CDP_COMPLETED_OVERDUE
 - Issues appearing here follow the same troubleshooting steps as in BDE completed overdue – but only for a CDP type process
