G3 – RSS Catchup

Overview

INFORMATION

This tool is to be used for:

1. Processing old RSS extracts of a G3 property configured in any of the RSS application with doUpload set to false.
2. Processing old RSS extracts of a G2 property which is getting migrated to G3.

Before using this tool, the following important points should always be referred to and considered.

Check if

1. Jenkins is unavailable due to any scheduled maintenance activity.
2. G3 system is unavailable due to any scheduled maintenance activity.

- **PRE-REQUISITES:**

Must have access to:

- Jenkins

- Aspscripts page. http://aspscripts.ideasprod.int/rateshopping_info/ to get the instance & RSS application name.

Procedure:

- Login to the Jenkins URL (<http://jenkins.ideasdev.int/view/G3/job/G3Support-RssExtracts-Catchup>)
- Click on Login link.

- Enter your Jenkins credentials for login.

- You will be redirected to the Jenkins Job dashboard screen, click on “Build with Parameters” tab.

The screenshot shows the Jenkins IDEas interface. The top navigation bar includes the 'Ideas' logo, a search bar, and the user 'ASHISH NAIR' with a 'LOGOUT' link. The breadcrumb trail indicates the path: JENKINS > G3 > G3SUPPORT-RSEXTRACTS-CATCHUP. The left sidebar contains a list of navigation options: 'Back to Dashboard', 'Status', 'Changes', 'Workspace', 'Build with Parameters' (highlighted with a red box), 'Configure', 'Wordie', 'Rebuild Last', 'Pending Changes', 'Set Next Build Number', 'Job Config History', 'Groups', and 'Roles'. The main content area is titled 'Project G3Support-RssExtracts-Catchup' and contains a form for configuring the build. The form includes the following fields: 'Instance_Name' (dropdown menu with 'glb2201' selected), 'application' (dropdown menu with 'rss-1' selected), 'PropertyCode' (text input field), 'ExtractPattern' (text input field), 'DropZone' (dropdown menu with 'Hilton' selected), 'Start_Year' (dropdown menu with '2014' selected), 'Start_Month' (dropdown menu with '1' selected), and 'G2G3_Migr' (dropdown menu with 'NO' selected). A 'Build' button is located at the bottom right of the form. Below the form, there is a 'Build History' section showing a list of recent builds with their IDs, timestamps, and status icons.

- Select the “Instance_Name” & “Application” where RSS application is available. Default values are “glb2201” & “rss-1”. But you can choose the other values from the drop down list
- Enter “PropertyCode or AccountID” for which you want to copy the RSS extracts to G3 RSS file DropZone
- Enter the extract pattern short format. i.e. 1111-1111 or 11111111. Refer to rss index page to get this information.
- Then select the RSS file DropZone: Hilton for G3 Prod1 property & ESA for G3 Prod2 property. Default value is “Hilton”.
- Then select the Year & Month from which you want the script search & copy the extracts. It will consider this input as starting point & copy the RSS extract received till date. Default values are “2014” & “1”.
- If it's a G2 to G3 migration property i.e. Live on G2 but also running on G3. Then first we need to set the parameter “Do Upload” to False in G2 CMA. This will prevent the files in G2 to get reprocessed(Reprocessing old files in G2 will result in multiple failures/exceptions on SWB). Restart the RSS instance. Select G2G3_Migr value as YES. The default value is NO. Once the **build** is run, make sure you change the parameter “Do Upload” back to True in G2 CMA and then restart the RSS instance.

- Click on build.
- A page displaying the console output will be opened as shown below.**Console Output of successful property installed: (notice the green flag near heading 'Console Output')**

Console Output of unsuccessful property install: (notice the red flag near heading 'Console Output')

- In case of failure observe/analyze the console output log and try to figure out the cause, failure cause may be as below.Scenarios:-
 - Incorrect inputs or typo error for build.
 - Property doesn't exist in given instance & RSS application.
 - Currently from G3 side we have single thread mechanism to pick the RSS extract for processing. Because of which we cannot just dump large

number of RSS extracts. Considering the daily process & we have set a check in the script which goes & finds of number of pending RSS extract in the given file dropzone. If its above 4000 then it doesn't start the copy operation & comes out gracefully with message

The no. of files in dropzone are greater than 4000 !!!.. Please try again after few hours.

Limitation:

- It can work on only one property at a time.
