## G3 – Repeat Decision failures (Pro-Mo)

The objective behind creating the repeat **decision failures governance** is that we want to empower our clients by making sure that they have the right **decisions** within their systems, however at times there are challenges with the selling systems – there a configuration issues or there’s not enough traction with such type of issues and we wanted to improve the way in which we get that traction across the company as a single unit

the system performance and monitoring team which is the SPM team monitors all the inbound as well as the outbound traffic and then they go ahead and make notes about issues with in G3 monitoring system however it is very difficult to identify those properties which have failed for decision upload consecutively for more than 3 days.

We wanted to **build** governance around these. So what we have done is created a new page on the Insights which gives you a list of all the properties that are failing for decision of load for 3 consecutive days.

users can go ahead and make notations about the errors that they see or any comments that they would like to add about it.

Incidentally SPM team would not have to go ahead and manually key details on Insights all the time . It's a fluid flow of comments that are added within G3 for such failure, that goes or is made available within the Insights screens with this all the information that is available in G 3 notes for that failure and give the enterprise relationship managers or the client relationship managers an insight about the latest update made by the SPM team for that particular property, for that failure and the days preceding.

This will allow both the client services and the system performance monitoring teams to be on the same page in terms of the issue that the client is experiencing. This hopefully will allow the teams to be more stream line in their effort to be able to assist /aid clients to be able to resolve such issues really quickly. Do note that the absence of any notes with G3 will result in an orange color indicating that SPM team has not made any notes it may not necessarily mean that they have not done something for it, just needs more investigation

Also, If you do not see any comments within the Insight Dashboard here under the comment section and it does not appear green, does not mean that the client services team has not updated it. It only means that some of it resides outside with the CRM /ERM but it is not updated with on the dashboard however this page will serve as a single source of truth and help us track all of such issues in a quick efficient and daily fashion and hopefully bring greater value our client and also bring greater focus from ideas as a company for those clients who are experiencing such issues .

## Update : 17-April-2019

1. The scheduled refresh is now set to 00:30 CST
2. Users now have a filter option : Easily identify properties that have failed for date range. Range is from 1 upto 10 days from the current day (day of dashboard refresh – as highlighted at the very top)

We will show Accor properties as well on the list that appear to fail for decision delivery but really is generally failure for acknowledgement receipt (which we weren't showing earlier).
