G3-HTNG (Sabre/IHotelier) Decision Upload Related

This document will help while working on the decision related issues like vendors – Sabre (synxis/ihotelier) We have noted down few scenarios and the information needs to be sent out to the vendor for further investigation.

Scenarios -1

Getting slow response/ acknowledgements from the vendor compare to daily uploads (HTNG job)

- During the monitoring activity if you observe slow decision uploads or slow responses/ acknowledgements are receiving from the vendor for a specific property or multiple properties then one should check the response getting from the vendor i.e. time takes to receive acknowledgement file from the vendor.
- Please don't send an email stating that "we are getting slow response for the <property name> or properties". Please specify the exact nature of the issue. Just mentioning, Decision upload issues is a little vague for the vendor to investigate the issue properly.
- For Sabre (Synxis/Ihotelier), we do upload decisions in chunks. Find out the count of chunks generated for a specific property also check the decisions (LRV, overbooking or BAR by LOS/dailybar etc) for which we are getting slow responses/acknowledgement from the vendor.

Job Details

Job Summary - 20853628

Job Name : HTNG Decision Delivery Job

System Mode : Decision Delivery Mode

Node : US2P3AP22

Step Name : completeRegulatorRequestStep

Status : Completed

Loop : 4 of NA complete

Client Code : PENTA Client Name : Penta Hotels

Creation Date : 30-Aug-2018 20:46:48 PM

Property Code : 0014 Property Name : PHBAI

Duration : 00:02:07

Actions

Loop Number: All

Execution Steps	Execution Parameters	Execution Context	Step Name	Value	Loop	Log	Status	Start Date	End Date	Duration
▶ decisionUploadStartedStep							COMPLETED	30-Aug-2018 20:46:54 PM	30-Aug-2018 20:46:54 PM	00:00:00
▶ roomTypeLrvChunkedDeliveryStep							SKIPPED	30-Aug-2018 20:46:55 PM	30-Aug-2018 20:46:55 PM	00:00:00

How to find out the chunk information and its response: –

- Open the HTNG Decision Delivery Job
- Go to the tab – Execution Steps (first tab)
- Every chunk starts from the step called – **loopstep and ends at the step called – deferredDecisionDeliveryStep (Currently, is not active in the production so G3 is skipping this step)

E.g LRV decision uploads starts from the step roomTypeLrvChunkedDeliveryLoopStep and ends at deferredDecisionDeliveryStep

- We can see the loop number in the **LoopStep
- The actual response, SOAP Chunk Size, SOAP Current Chunk, SOAP Total Chunks and decisionChunkSizeMap can be seen in the step called – **ChunkedDeliveryStep
- Email should be sent out to the vendor with relevant information like number of chunks generated for the property, time required to complete these chunks etc., just do not send email stating Decision upload or getting slow response. If the issue observes for multiple properties then please do provide couple of examples in the email.

Scenarios -2

The HTNG (Sabre/ihotelier) configured URL is inaccessible

- In above scenario, we should send an email stating URL is inaccessible resulting decision uploads are failing.
