G3-Opera Deployment Parameter Audit Process

Overview

As a part of the deployment activity, CARE team completes the Add Client and Add Property activities. This completes the configuration of a property excluding the decision upload piece. This document outlines the process to complete an audit of the parameters outlined in the scope below.

Scope

Scope of the audit process is limited to the G3-Opera properties. The Add Client and Add Property template (this is internal document for CARE consumption only) is used as a reference to identify the parameters to be audited. The template is available on the [SharePoint, link-](#)

Audit of the decision upload related parameters is currently out of scope as there are potential changes in store to the process of turning a property in two-way mode.

Parameters to be audited

- monitor.DailyProcessingMonitoringEnabled
- core.propertyTimeZone
- integration.opera.pastDays
- integration.futureDays

- bar.webRateShoppingEnabled
- feature.RateShoppingAdjustmentEnabled
- feature.GroupPricingEnabled
- feature.GroupWashByGroupEnabled
- feature.WhatIfEnabled
- feature.AnalyticalMarketSegmentEnabled
- bar.barDecision
- bar.EnableSingleBarDecision
- bar.AllowMinMaxLOSOVERRIDE

Parameters excluded from Audit

- integration.opera.pingTimeout
- core.property.externalSystem
- PreProduction.RemoteTaskCreationEnabled
- integration.opera.pseudoRoomTypeCodes
- integration.opera.operaResort
- core.property.YieldCurrencyCode
- integration.opera.opmsAgentInstallationType
- integration.opera.orsAgentInstallationType
- core.property.ApplyYieldCurrency
- core.property.BaseCurrencyCode
- integration.ratchet.yieldCurrencyCode
- bar.webRateAlias
- bar.webRateSource

The above parameters are excluded from the audit as the initial deployment activity would not complete successfully unless these parameters are setup correctly.

Data Sources

G3 Application, CARE Internal Add Client/Add Property Template, SFDC

Process

Data Collection

- Execute the report (<https://ideas-sas.my.salesforce.com/00O30000009Gerb>) in SFDC on Solution Profiles across G3-Opera properties to extract information about various modules the property is subscribed to. These are reflected as corresponding parameters in G3 application.
- From the G3 application, run the report for all the identified parameters
- The report needs to be run separately for each parameter for each client
- Export the output into Excel (for example : if we have to run a report on 14 parameters across 50 clients, we will get 700 distinct excel sheets)
- Collate the data present in all of the distinct excel sheets into a single master sheet

Audit based on Solution Profile

- The below table shows the modules present on solution profile and its corresponding parameters in the G3 Application:

Solution Profile Module	G3 Configuration Parameter
Time Zone	pacman.core.propertyTimeZone
<u>Group Pricing</u>	pacman.feature.GroupPricingEnabled
<u>Group Wash by Group</u>	pacman.feature.GroupWashByGroupEnabled
What If Scenarios	pacman.feature.WhatIfEnabled
Bar Type Display	pacman.bar.barDecision
	pacman.bar.EnableSingleBarDecision
	pacman.bar.AllowMinMaxLOSOVERRIDE
BDE <u>Forecast</u> and Decision Window (days)	pacman.integration.futureDays
	pacman.forecasting.forecastWindowBDE
	pacman. <u>optimization</u> .optimizationWindowBDE

- Compare the report fetched from solution profile with the master sheet

Auditing remaining parameters from the identified list

- Review the master sheet for the remaining parameters
- Identify variances

Action Plan

- Based on any variance identified either of the below actions can be initiated –
 - CARE to review and make necessary amends to the values
 - CARE to initiate discussion with the Client Services team as required and take appropriate actions

Escalation Process

Please follow the standard escalation process within the CARE team in the event of any queries or issues encountered.
