G3RMS – Reputation And Review Analysis

G3 RMS – Reputation and Review Analysis(RRA)

Introduction

Reputation & Review information is collected by vendors like

- ReviewPro
- Brand Karma
- Revinate

We call them as RRA Sources.

How do they collect the data?

These sources may have a contract with different channels where hotel customers/guests share their experience of staying in a hotel.

They can even rate the hotels based on predefined services like

- Staff Attitude and service
- Cleanliness
- Location
- Value
- Restaurants
- Guest Room

Different channels which gather such information are

Expedia, Booking.com, Zoover, HolidayCheck, Hotels.com, Google, Facebook, TripAdvisor, LateRooms, Venere, Ab-in-den-Urlaub, Tophotels.ru, Agoda, Ctrip, Dianping, HRS, Hotel.de, Wotif, TabletHotels, Orbitz, Atrapalo, 4TravelJapan, BestDay, Despegar, Priceline, Mafengwo, HotelClub, Yelp, Travelocity.

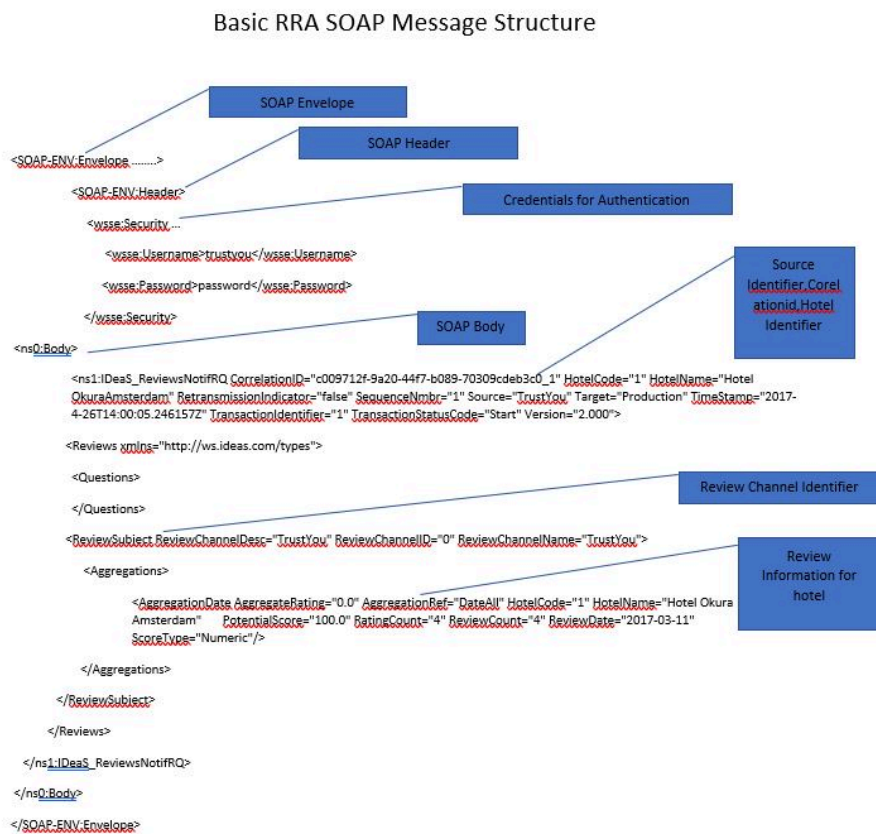

G3 system would like to accept such data and consume the same impacting the final BAR decisions.

IdeaS would also like to show this data in a meaningful format to end user.

There are certain pre-requisites for this data to be consumable.

- RRA shopping data should be there for @ least 3 hotels out of which 1 should be the self-hotel in G3.
- Competitors should be those competitors for which we are doing rate shopping as well. There is no point in RRA shopping for competitors X Y & Z where as rate shopping is done for hotels P, Q & R.

We have to have @ least 3 months of RRA data in order to use it

RRA Vendor Configuration:

Vendor configuration for RRA can be done using Installation>Vendor Screen

The Client Services team provides the details like Username/password. Credentials can be provided at Vendor/Client/Property levels..

User needs to provide, Username,Password,Inbound Hotel Code.

If no credentials are provided at Property level, then Client level credentials will be used .

If no credentials are provided at Client level then Vendor level credentials will be used.

It is also observed in some cases that IDeaS have provided the username and password which is configured already at the Vendor level.
