G3: Reporting in IDeaS G3 RMS with the Component Rooms License Active V1

Author: Stephen Hambleton

Introduction

With Component Room Types being introduced into IDeaS G3 Revenue Management System (RMS) builds, this introduces some complexity associated with reporting across different data levels throughout the RMS.

This document summarizes some of the key considerations when reviewing data across different levels in IDeaS G3 RMS when the component Rooms License is active and Component Rooms are populated and configured.

What is a Component Room Type?

Component Room Types are Room Types which are formed from combining multiple physical Room Types to form new virtual Room Types referred to as Component Room Types or Virtual Suites.

Figure 1 – Example Component Room Structure

In this scenario:

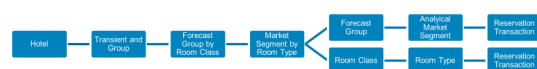

- The two physical Room Types: King and Double, can be combined to form a new Component Room Type (KNGSUITE). Selling one KNGSUITE therefore consumes two physical units of inventory.
- The two physical Room Types: DLX and Double, can be combined to form a new Component Room Type (DLXSUITE). Selling one DLXSUITE therefore consumes two physical units of inventory.
- The two Component Room Types (KNGSUITE and DLXSUITE) can be combined to form a new Component Room Type (PRESIDENTIAL). Selling "PRESIDENTIAL" would consume four units of physical inventory.

Reporting Considerations

This section provides an overview of the key challenge, business requirements and decisions made regarding reporting for IDEaS G3 RMS builds which include Component Room Types and have the Component Room license active.

Current Levels of Reporting in IDEaS G3 RMS

Figure 2 – Summary of Data Levels Available in IDEaS G3 RMS User Interface

For additional details please see Appendix 1.

Reporting Including Component Room Types

The example in Figure 1 presents several challenges with respect to reporting, which can be summarized as follows:

- If a Component Room Type is sold: how should Rooms Sold and Revenue at each level be represented. This is challenging since a single reservation transaction is received when a Component Room Type is sold but at levels such as total hotel – occupancy and revenues must be recorded against the physical hotel capacity.
- Where a component Room Type is sold – this impacts the available capacity and occupancy of all physical parts of the Component Room Type, however only one single Reservation Transaction exists. Conversely if the Physical Parts of a Component Room are sold, this reduces the available capacity of the Component Room Types.
- IDEaS products currently make no distinction between occupied and sold rooms
 - g. Using the example from Figure 1 – if we have 1 KNGSTE Sold, we will show 1 KNGSTE; 1 KING and 1 DOUBLE as occupied but there is no field in IDEaS to show that only one of these rooms is occupied because it was sold to a guest.
 - Similarly we do not distinguish between a Room which was sold to a guest and one occupied by a Complimentary or House Use reservation.

- Room Classes can contain Physical Room Types only, Component Room Types only or a mixture of both

Business and Analytics Requirements for Reporting

Definitions

- Single Counted:** Recorded only at the level sold e.g. if a Component Room Type is sold – On-books Rooms and Revenue are only recorded at this level
- Double Counted:** Recorded at both the sold and occupied level e.g. if a Component Room Type is sold – On-books Rooms and Revenue are recorded at both levels, meaning that IDEaS distributes the occupancy and on the books from the Component Room Types to their physical parts.

Business Requirements

As a user of IDEaS G3 RMS I need to see the following data:

- At Hotel Level I want to see statistics based on what is expected to be sold or occupied and the associated revenues based on the Physical Capacity of the Hotel
- At Business Type Level (Transient, Group) I want to see statistics based on what is expected to be sold or occupied and the associated revenues based on the Physical Capacity of the Hotel
- At Forecast Group Level I want to see the statistics based on what is expected to be sold or occupied and the associated revenues based on the Physical Capacity of the Hotel
- At Market Segment Level: I want to see the statistics based on what is expected to be sold or occupied and the associated revenues based on the Physical Capacity of the Hotel
- At Business View Level: I want to see the statistics based on what is expected to be sold or occupied and the associated revenues based on the Physical Capacity of the Hotel
- At Forecast Group by Room Class Level I want to see what is expected to be sold and occupied but also where demand actually exists vs. remaining capacity
- At Room Class Level I want to see what is actually occupied regardless of if the inventory is a Physical Room Type or a Component Room Type
- At Room Type Level I want to see what is actually occupied regardless of if the inventory is a Physical Room Type or a Component Room Type
- At Transaction Level I want to roll-up reservations exactly as they exist based on what was actually sold without double counting.

Considerations for Reviewing Demand

Due to the importance and inter-relationships of Room Types and Room Classes in the RMS when working with Component Rooms: One key consideration will be that Demand and Wash should be reviewed at Room Class Level (in Reports and Dashboards) or Forecast Group by Room Class (in Demand and Wash Management) levels only.

Reviewing Demand and Wash at Hotel, Business Type, Forecast Group, Business View and Market Segment levels will not be equivalent to the demand and wash relative to the physical capacity, as the rest of the data is at these levels. The Demand and Wash represents a direct presentation of the true demand at the Forecast Group by Room Class Level.

Table 1 – User Reporting Availability Across Various Levels

Level	<u>Capacity</u>	<u>Remaining Capacity</u>	Occupancy	Arrivals/ Departures	Cancellations	Revenue On- Books	<u>Demand</u>	<u>Wash</u>	<u>Occupancy Forecast</u>	<u>Revenue Forecast</u>
Hotel	P	P	P	S	S	P	S	S	P	P
<u>Business Type</u>	N/A	N/A	P	S	S	P	S	S	P	P
<u>Forecast Group</u>	N/A	N/A	P	S	S	P	S	S	P	P
MS/ AMS	N/A	N/A	P	S	S	P	S	S	P	P
Business View	N/A	N/A	P	S	S	P	S	S	P	P

Level	Capacity	Remaining Capacity	Occupancy	Arrivals/ Departures	Cancellations	Revenue On-Books	Demand	Wash	Occupancy Forecast	Revenue Forecast
Forecast Group by Room Class	N/A	N/A	D	~S[1]	~S	~S	S	S	D	D
Room Class	D	D	D	S	S	D	S	S	D	D
Room Type	D	D	D	S	S	D	S	S	D	D
Transaction/ Transaction Roll-up	N/A	N/A	S	S	S	S	N/A	N/A	N/A	N/A

Key:

- P – based on physical capacity only, if rooms were sold at Component Room Type level, statistics will be disaggregated
- S – based on sold or demanded, regardless of the level e.g. if 1 Component Room Type was sold, 1 Room would be shown even if this CR is made up of two Physical Rooms
- D – double counted – recorded against both the physical rooms and the Component Rooms subject to the Room Type to Room Class mapping for the property.

Analytics Requirements

Generally speaking – Analytics wants to see the available capacity for each room type but the sold data only based on what was sold.

E.g. if the Component Room Type was sold, they want to see the sold recorded against the Component Room Type and appropriate MS but they do not want to see double counting at Physical Level, they only want to see the capacity decremented appropriately.

Reporting Defined for IDeaS G3 RMS

Due to the topology of IDeaS G3 RMS – a separate SAS Analytics and IDeaS G3 RMS Application database exists for each property, meaning that IDeaS can support both the Analytics requirements and users’ business reporting requirements.

To support these business and analytics requirements the data represented in the tables below outlines what was agreed between SAS, IDeaS and our client partners[2].

Table 2 represents a high-level overview of the analytics reporting requirements and table 3 represents an overview of the business reporting requirements at various levels.

Table 2 – Analytics Reporting Requirements Summary

Level	Occupancy On-Books & Revenue	Occupancy and Revenue Forecast	Remaining Capacity	Demand and Wash Forecast
Analytical Market Segment by Room Type	Single Counted: Based on the actual Room Types sold by AMS	Single Counted: Based on the actual Room Types expected to be sold by AMS	N/A	Single Counted: Based on the <u>Demand</u> and expected <u>Wash</u> at the <u>Forecast Group by Room Class</u> Level.

Room Type	Single Counted: Based on the actual Room Types sold	Single Counted: Based on the actual Room Types expected to be sold by AMS	Double counted – deducting to account for decremented capacity in Physical RTs when Component Rooms are sold	Single Counted: Based on the Demand and expected Wash at the Room Class Level.
Reservation Transaction	Single counted based on what was actually sold	N/A	N/A	N/A
Group Block	Single counted based on what was actually sold	N/A	N/A	N/A

Table 3 – Business Reporting Requirements Summary

Level	Occupancy On-Books & Revenue	Occupancy and Revenue Forecast	Remaining Capacity	Demand and Wash Forecast
Hotel	Single Counted: Based on physical capacity at hotel level and Physical Room Types occupied	Single Counted: Based on physical capacity at hotel level and Physical Room Types occupied	Single Counted: Based on physical capacity at hotel level and Physical Room Types occupied	Single Counted based on physical occupancy[3]
Forecast Group by Room Class [4]	Double Counted: Based on the actual Room Types occupied	Double Counted: Based on what we expect to be occupied	N/A	Single Counted based on what is expected to be demanded and what will wash .
Market Segment by Room Type [5]	Single Counted: Based on the actual Room Types sold by AMS	N/A	N/A	N/A
Forecast Group [6]	*Single Counted: Based on physical capacity at hotel level and Physical Room Types occupied – Component Room Type Rooms sold/ revenues will be disaggregated to Physical parts	*Single Counted: Based on physical capacity at hotel level and Physical Room Types occupied – Component Room Type Rooms occupancy and revenue forecast will be disaggregated to Physical parts	N/A	Single Counted based on physical occupancy[7]
Room Class	Double Counted: Based on the actual Room Types sold in that Room	Double Counted: Based on the actual Room Types sold in that Room Class (physical, component or	Double Counted: Decrementing both Physical and Component Room Types.	Single Counted based on what is expected to be demanded and what will wash .

Level	Occupancy On-Books & Revenue	Occupancy and Revenue <u>Forecast</u>	<u>Remaining Capacity</u>		<u>Demand and Wash Forecast</u>
	<u>Class</u> (physical, component or both) and the Physical room types occupied as a result of <u>Component Room Sales</u>	both) and the Physical room types forecasted to be occupied as a result of <u>Component Room Sales</u>			
Analytical Market Segment	*Single Counted: Based on <u>physical capacity</u> at hotel level and Physical Room Types occupied	*Single Counted: Based on <u>physical capacity</u> at hotel level and Physical Room Types occupied	N/A		Single Counted based on physical occupancy[8]
<u>Room Type</u>	Single Counted: Based on the actual Room Types sold in that <u>Room Type</u> . Double Counted: Based on the actual Room Types sold in that <u>Room Class</u> (physical, component or both) and the Physical room types occupied as a result of <u>Component Room Sales</u>	Single Counted: Based on the actual Room Types sold in that <u>Room Type</u> . Double Counted: Based on the actual Room Types sold in that <u>Room Class</u> (physical, component or both) and the Physical room types forecasted to be occupied as a result of <u>Component Room Sales</u>	Double Counted: Decrementing both Physical and <u>Component Room Types</u> .	Single Counted based on what is expected to be demanded and what will <u>wash</u> .	
Reservation Transaction	Single counted based on what was actually sold	N/A	N/A		N/A

Key:

Analytics data has different requirements to the analytics data set.

Disaggregation Methodology to Support Reporting Requirements

Since most integrations (Opera PMS included) do not duplicate Rooms Sold and Revenue data to Physical Room Types where Component Room Types are sold – IDeaS will duplicate the Rooms Sold and revenues from Component Room Type sales and split the revenue equally amongst the Physical Room Types sold.

This will support reporting to meet Hotels’ business requirements at the following levels, inclusive of all Room Revenues:

- Market Segment
- Room Type
- Room Cass

Simple Example

One DLXSUITE has been sold at \$1000 USD

IDeaS will record this as outlined in Table 4 to support the required reporting at various levels.

Table 4 – Simple Example Outlining Methodology for Disaggregation

<u>Room Type</u>	Rooms Occupied	<u>Room Revenue</u>
DLX [Occupied]	1	500
DOUBLE [Occupied]	1	500
DLXSUITE [Sold]	1	1000

Detailed Example

Note – all Rooms Sold are in Market Segment A to reduce complexity in the example.

Table 5 – Key Hotel Statistics

Hotel <u>Yieldable Capacity</u>	75
Hotel <u>Physical Capacity</u>	60

Table 6 – Room Type Structure

<u>Room Type</u>	<u>Capacity</u>	Component Parts
PR1	10	N/A
PR2	10	N/A
CR1	5	One PR1 and One PR2 form One CR1
PR3	20	N/A
PR4	20	N/A
CR2	10	Two PR3 and Two PR4 form One CR2

Table 7 – Room Type to Room Class Structure

RT	RC	Contents
PR1	1	Physical only
PR2	1	Physical only
CR2	2	Component only
PR3	3	Mixed
PR4	3	Mixed
CR1	3	Mixed

Table 8 – Room Type Statistics

Level	Occupied	Sold	Occ %	Revenue	ADR	Physical	<u>Virtual Capacity</u>	<u>Total Capacity</u>	RevPAR
PR1	5	2	50%	500.00	100.00	10	-	10	50.00
PR2	10	7	100%	1,000.00	100.00	10	-	10	100.00
CR1	3	3	60%	600.00	200.00	-	5	5	120.00
PR3	17	1	85%	1,700.00	100.00	20	-	20	85.00
PR4	17	1	85%	1,700.00	100.00	20	-	20	85.00
CR2	8	8	80%	1,600.00	200.00	-	10	10	160.00
Total SUMMED	60	22		7,100.00	118.33	60	15	75	94.67

Table 9 – Room Class Statistics

Based on the Room Class structure identified above – this produces the following statistics

Level	Occupied	Sold	Occ %	Revenue	ADR	Physical	<u>Virtual Capacity</u>	<u>Total Capacity</u>	RevPAR
RC1	15	9	75%	1,500	100.00	20	-	20	75.00
RC2	8	8	80%	1,600	200.00	-	10	10	160.00
RC3	37	5	82%	4,000	108.11	40	5	45	88.89
Total SUMMED	60	22	80%	7,100	118.33	60	15	75	94.67

Table 10 – Hotel, Market Segment and Business Type Levels

Level	Occupied	Sold	Occ %	Revenue	ADR	Physical	<u>Virtual Capacity</u>	<u>Total Capacity</u>	RevPAR
Hotel	49	22	82%	4,900.00	100.00	60	0	60	81.67
<u>Business Type</u>	49	22	N/A	4,900.00	100.00	N/A	N/A	N/A	N/A
MS A	49	22	N/A	4,900.00	100.00	N/A	N/A	N/A	N/A

Notes:

- There are three CR1s and 8 CR2s sold – meaning that the remainder of the rooms of the rooms sold (One PR3 and One PR4; Two PR1 and Seven PR2 are rooms sold at the physical level) and the remainder of the occupancy in PR1, PR2, PR2 and PR4 comes from the Component Rooms
- The Rooms Occupied and Room Revenue is disaggregated to the Physical Room Types to support Room Type and Room Class level reporting as well as effective aggregation to higher levels e.g. Hotel and Market Segment based on Physical Room Type occupancy.

Appendix 1 – Levels of Reporting Granularity in IDeaS G3 RMS

This appendix contains an overview of the reporting that is offered at different levels within reports and within specific reports and dashboards in IDeaS G3 RMS when the Component Room Types license is active and Component Room Types are configured and therefore included in IDeaS G3 RMS.

Note: The consideration related to Demand and Wash Forecasting outlined earlier in this document applies throughout Table 11 below.

Table 11 – Reports and Reporting Levels in Reports and Dashboards in IDeaS G3 RMS Overview

Screen/ Report	Basis
If a report is selected at <u>Room Class</u> level	Show Physical and Non – Double Counted except for <u>demand</u> and <u>wash</u>
If a report is selected at <u>Room Type</u> level	Show Physical and Non – Double Counted except for <u>demand</u> and <u>wash</u>
If a report is selected at <u>Forecast Group</u> Level	Based on <u>Physical Capacity</u>
If a report is selected at Market Segment Level	Based on <u>Physical Capacity</u>
If a report is selected at Business View Level	Based on <u>Physical Capacity</u>
If a report is selected at Total Hotel level	Based on <u>Physical Capacity</u>
If a report is selected at <u>Business Type</u> level	Based on <u>Physical Capacity</u>
At A Glance	Based on <u>Physical Capacity</u>
Business Analysis – Summary	Based on <u>Physical Capacity</u>
Business Analysis – Data Details – <u>Forecast</u> Groups	Based on <u>Physical Capacity</u>
Business Analysis – Data Details – Market Segment/ <u>Rate Code</u>	Since this data is summed from Transactions – this data will be based on the room types sold e.g. if a <u>Component Room</u> Type is sold, this is what will be reported on
Business Analysis – Data Details – <u>Room Class</u>	Filters Added to Include Physical Only, Include Component Rooms Only or All <u>Inventory</u>
Business Analysis – Pace Data	Based on <u>Physical Capacity</u>
Business Analysis – Performance	Based on <u>Physical Capacity</u>
Business Insights	This Dashboard rolls-up reservation transactions – this will be based on actual sales and may be a mixture of Component Rooms and Physical Rooms based on what was sold.
Arrivals by LOS	Rolled-up from transactions based on what was actually sold
<u>Booking Pace</u> Report	Depends on level selected – see rows 1-8
<u>Booking</u> Situation Report	Depends on level selected – see rows 1-8
Comparative <u>Booking Pace</u> Report	Based on <u>Physical Capacity</u>
Data Extraction Report	Depends on level selected – see rows 1-8. No filters will be added – users can filter in Excel
<u>Inventory</u> History	All Room Types – Physical and Non
Performance Comparison Report	Based on <u>Physical Capacity</u>

Screen/ Report	Basis
Pick-up/ Change and Differential Controls Report	Depends on level selected – see rows 1-8
Pricing Pace Report	All Room Classes based on their contents – Physical and/ or <u>Component Room</u> Types
Pricing Report	All Room Classes based on their contents – Physical and/ or <u>Component Room</u> Types
Production Report – All Rate Plans	This report rolls-up reservation transactions – this will be based on actual sales and may be a mixture of Component Rooms and Physical Rooms based on what was sold.
Rate Plan Production Report	This report rolls-up reservation transactions – this will be based on actual sales and may be a mixture of Component Rooms and Physical Rooms based on what was sold.
Restriction Report	All Room Classes based on their contents – Physical and/ or <u>Component Room</u> Types

Configuration of Component rooms:

- Refer to the case with case reason “Data Capture and Deployment”
- The case should contain information on whether Component rooms should be enabled.
- ICS will include this as part of the installation process by enabling the parameter “iscomponentroomsenabled”
-

[1] ~ Not shown in IDEaS G3 RMS today

[2] Two Roads Hospitality and validated with Vail Resorts.

[3] Request cannot be accommodated as G3 RMS forecasts demand by Forecast Group by Room Class. Only Occupancy Forecasting is disaggregated

[4] Only visible in Demand and Wash Management > Override Details. Remaining capacity will be added to this screen so that users can determine the system’s intended strategy e.g. if demand is low but we expect to fill the physical parts of a Component Room.

[5] Currently only available in Business Insights – since this is rolled-up from the transactions this would only be single counted.

[6] Where a * is shown – IDEaS will disaggregate Component Room Type sales and revenues to the physical parts of the Component Room Type e.g. if KNGSUITE is sold – IDEaS will disaggregate the Rooms Sold and Revenue to KNG and DOUBLE.

[7] Request cannot be accommodated as G3 RMS forecasts demand by Forecast Group by Room Class. Only Occupancy Forecasting is disaggregated

[8] Request cannot be accommodated as G3 RMS forecasts demand by Forecast Group by Room Class. Only Occupancy Forecasting is disaggregated
