G3: HTNG Installation/ Reinstallation Process

Pre-Requisties:

- SFDC Case entered by CPM/CRM:
 - Completed HTNG Implementation form attached.
 - PMS details mentioned at the case level.
 - PMS provider account manager account name and email address.
 - **Exception:** The new protel i/O MPE/AIR integration will use the protel PMS' [Hotel Code], instead of the last 4-digits of IDeaS account number. This information is currently available with Integrations(Kristen)/Rekhaunsh.
- Property is added on the schedule:
https://ideas.na.sas.com/integrations/Lists/HTNG_Installs/Status.aspx

CONFIGURATION:

The configurations on our side involves setting up the property on both G2/G3 and NGI. The G2/G3 side configurations are quite similar to the existing workflows with additional few steps.

1.G3 Configuration:

1. Use the **HTNG Implementation form** to perform the following activities:
 1. Add the client in G3 PROD-2 system as per regular process.
 - External System: **NGI**
 - Sub System: **HTNG**

- [Service Recovery Procedure – IDeaSOperaAgent Service in “Stopping” State](#)
- [Processing Failures Due to Data Type Mismatch for MGM Resorts](#)
- [Dynamic Optimization](#)
- [HLTN/Handling Error for SAS Dataset Encoding Job](#)

2. Add the property in G3 PROD-2 under the correct client as per regular process.
 - External System: **NGI**
 - Sub System: **HTNG**
 - Select **Limited Data Build** if applicable
3. Update the correct **Core Settings** and **Inbound** information under Support->Installation->Property->Property Code
4. In case there are additional parameters, update the same through Support->Configuration->Property
5. For protellO clients we have to update the parameter ***pacman.integration.protel.authenticationToken***. This information is available at the case level or can be checked with Integrations (Kristen)/Rekhaunsh for ProtellO clients only.
6. Change the property stage to Data Population Mode

2. G3-NGI Vendor Configuration:

For the detailed process on Add property and NGI configuration , you can refer to the document by clicking on the link below:

[G3 Installation: Process to add a new property using HTNG | CARE Knowledge Base \(sas.com\)](#)

Initiating Conversations with Vendor/Client

When initiating conversations with the vendor/client – please use the predefined HTNG templates.

1. ICS/CPM will reach out to partner to coordinate an installation date.
 - Similar to the OXI process, ICS/CPM will send out requirements of the installation in advance to the PMS provider. The PMS provider and/or Hotel IT Department may require additional preparation time.
 - Based on the identified installation day, ICS will start monitoring the incoming messages.
 - HTNG Installations – data capture may last 2-5 business days. This will all depend on any communication and/or other challenges uncovered during the first scheduled date of data capture.

Email Templates Available:

Salesforce folder location: EMAIL – HTNG Installation

Note that these email templates are the same – however the email subject line identifies either G2 or G3. There is no difference in process to install, however, this will help identify where system configurations will be completed. Apart from the generic templates, there are some vendor specific templates that can be utilized as well.

For e.g., let's take the case 03146335 for a reference.

G3 HTNG Integration

Maestro PMS

Maestro contact: dwagner@maestropms.com

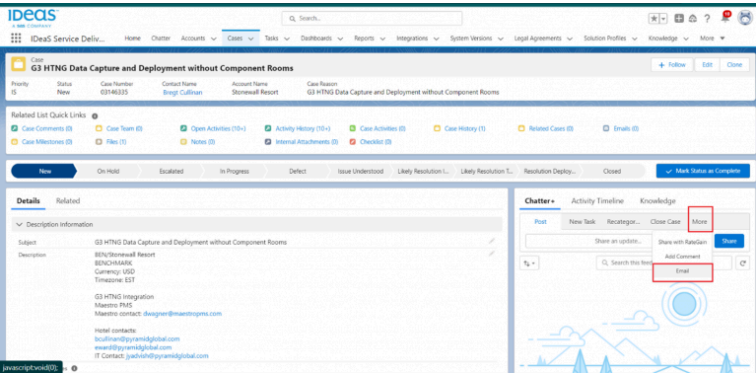

Hotel contacts:

bcullinan@pyramidglobal.com

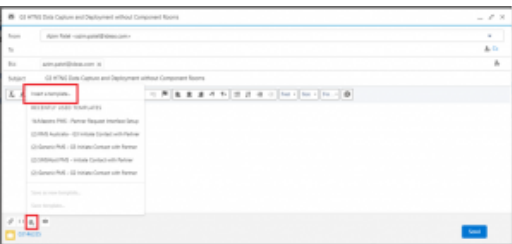

eward@pyramidglobal.com

IT Contact: jjadvish@pyramidglobal.com

Here you can see the PMS is Maestro and for this PMS we have specific template in SFDC.

Go to more > email > after this email window will pop up you have to maximize it.

Click on add template icon and then insert template

Select as shown in above image and search with the PMS name for template.

Then select the template fill up the necessary details and send to the vendor while keeping CPM/CRM in the cc.

Once the email is sent, Vendor will schedule the install and will start the data sync on scheduled date and will let us know.

Monitor incoming data and Data Validation

Once the PMS is setup and configured to send data to IDEaS RMS, IDEaS RMS will expect to receive a sync of data which is available within the PMS

Please refer the document “INTEGR – IDEaS RMS HTNG Implementation Overview_V1.5.pdf” which outlines the requirements of the full and/or daily data

sync.

Below are the rest calls that can be used to verify the data being sent to us.

1. Qualified Rates

[http://us2pngiap01.ideasprod.int:9090/nucleusQualifiedRatePlans/search/findByClientCodeAndPropertyCode?
clientCode=CHAINCODE&propertyCode=HOTELCODE](http://us2pngiap01.ideasprod.int:9090/nucleusQualifiedRatePlans/search/findByClientCodeAndPropertyCode?clientCode=CHAINCODE&propertyCode=HOTELCODE)

2. Unqualified Rates

[http://us2pngiap01.ideasprod.int:9090/nucleusUnqualifiedRatePlans/search/findByClientCodeAndPropertyCodeOrderByNameAsc?
clientCode=CHAINCODE&propertyCode=HOTELCODE](http://us2pngiap01.ideasprod.int:9090/nucleusUnqualifiedRatePlans/search/findByClientCodeAndPropertyCodeOrderByNameAsc?clientCode=CHAINCODE&propertyCode=HOTELCODE)

3. Groups

[http://us2pngiap01.ideasprod.int:9090/nucleusGroupBlockMasters/search/findByClientCodeAndPropertyCode?

search=clientCode==CHAINCODE;propertyCode==HOTELCODE&sort=lastModifiedDate,DESC](http://us2pngiap01.ideasprod.int:9090/nucleusInventories/criteria?search=clientCode==CHAINCODE;propertyCode==HOTELCODE&sort=lastModifiedDate,DESC)

7. Callback: (To check for specific message with correlationID)

[http://us2pngiap01.ideasprod.int:9090/htngCallbackStatuses/search/findFirstByClientCodeAndPropertyCodeAndCorrelationId?
clientCode=CHAINCODE&propertyCode=HOTELCODE&correlationId=](http://us2pngiap01.ideasprod.int:9090/htngCallbackStatuses/search/findFirstByClientCodeAndPropertyCodeAndCorrelationId?clientCode=CHAINCODE&propertyCode=HOTELCODE&correlationId=)

8. Callback to check all the failures

[http://mn5pngiappw101.ideasprod.int:9090/htngCallbackStatus/criteria?
search=clientCode==CHAINCODE;propertyCode==HOTELCODE;successful==false&sort=createDate,DESC](http://mn5pngiappw101.ideasprod.int:9090/htngCallbackStatus/criteria?search=clientCode==CHAINCODE;propertyCode==HOTELCODE;successful==false&sort=createDate,DESC)

9. NACK:

[http://us2pngiap01.ideasprod.int:9090/htngPrimaryValidations/criteria?
search=clientCode==CHAINCODE;propertyCode==HOTELCODE&sort=createDate,DESC](http://us2pngiap01.ideasprod.int:9090/htngPrimaryValidations/criteria?search=clientCode==CHAINCODE;propertyCode==HOTELCODE&sort=createDate,DESC)

te,DESC

10. Ignored:

<http://mn5pangiappw101.ideasprod.int:9090/htngMessageHealths/criteria?search=clientCode==CHAINCODE;propertyCode==HOTELCODE;validationStatus==IGNORED>

11. Rejected:

<http://mn5pangiappw101.ideasprod.int:9090/htngMessageHealths/criteria?search=clientCode==CHAINCODE;propertyCode==HOTELCODE;validationStatus==REJECTED>

12. Accepted:

<http://mn5pangiappw101.ideasprod.int:9090/htngMessageHealths/criteria?search=clientCode==CHAINCODE;propertyCode==HOTELCODE;validationStatus==ACCEPTED>

13. Valid:

<http://mn5pangiappw101.ideasprod.int:9090/htngMessageHealths/criteria?search=clientCode==CHAINCODE;propertyCode==HOTELCODE;validationStatus==VALID>

- Check the incoming messages using the above rest calls for any issues.
- In case of call back issues, we need to work with the vendor/Hotel IT to resolve the same.
- Once the historical summary statistics is received, the extraction in G3 will be triggered automatically.
- Once the data load is created and populated in G3, run the CMA query **HTNG:DataValidationAllQueries** on the property.
- Download the output in an excel file and verify the data for any issues.
- If all is in order, close the appropriate tasks so that ROA team can further perform their DV process.

Reinstallation:

Once the property is de-installed and shot it have to be installed again on the IDEaS side, basically the process of installation needs to be re-done.

The reinstallation will need to be done on the basis of a case from the CPM/ CRM.

1. Add client
2. Add property
3. NGI – Vendor config
4. Peer review
5. Reach out to the vendor for for data sync
6. Complete the install with vendor.
7. Once we have received the expected data populate it into the G3
8. Once the data is populated we can mark the install as complete.
