G3: Limited Data Build/ LIMITED DATA BUILD FOR G3 PROPERTY WITH COMPONENT ROOMS FEATURE

Introduction to LDB

(click the link above to access the document)

Many IDEaS clients continue to enjoy growth in the size of their hotel portfolios, through the construction of new hotels and the acquisition of existing properties. Due to the significant value that is gained through the implementation of an automated RMS prior to the first reservation being taken many clients and prospects are keen to begin working with IDEaS G3 Revenue Management System (RMS) as soon as possible. To meet this need, IDEaS has provided the first version of IDEaS G3 RMS “Limited Data Build option” (LDB). This option will provide a technical solution to support clients who are not able to meet the historical data requirements.

Intended Audience

This document is designed for IDEaS clients and prospects who are considering using the LDB process. It would be useful to review the ‘IDEaS Limited Data Build Data Sheet’ prior to reading this document.

Benefits of LDB

- **Systematic Revenue Management Processes from Day 1**
- The hotel management team will be able to work with the systematic revenue management processes available in IDeaS G3 RMS prior to the hotel opening.
- Where applicable this also ensures alignment to the existing hotels in the estate, which are already benefiting from IDeaS Revenue Management Solutions.
- This helps to ensure that the new hotel not only adheres to the company standards from the start, but also that the revenue team fully leverages the power of the IDeaS software solutions. In addition, it is more effective to be able to open a hotel with long term business practices established, rather than implementing short-term processes which will later have to be changed. The reporting and business insights will also support strategic and tactical decision making as the new hotel matures.
- **Scientifically Based Forecasts and Decisions**
The hotel will benefit from IDeaS G3 RMS advanced forecasts from the start of its operation. Although it is important to note that the quality of the forecasts are highly dependent on the quality of the hotel's projected rooms sold and revenue and the expected business patterns provided at the start of the process, they will invariably be more reliable and with greater detail than manually produced forecasts.
- **Automated Deployment of Decisions**

As the hotel team shares their business insight and builds a partnership with IDeaS G3 RMS, an understanding of and confidence in the forecasts and decisions will develop. Where integration allows, the hotel will choose when they are ready to deploy the restrictions and pricing decisions automatically to their integrated selling systems. A full set of sophisticated controls will then be deployed following each system optimization.

Overview

Click on the link below to get interesting detailed information of how Component rooms are dealt with in the IDeaS systems.

Working with Component Room Types or Virtual Suites in IDeaS Products

this documented process

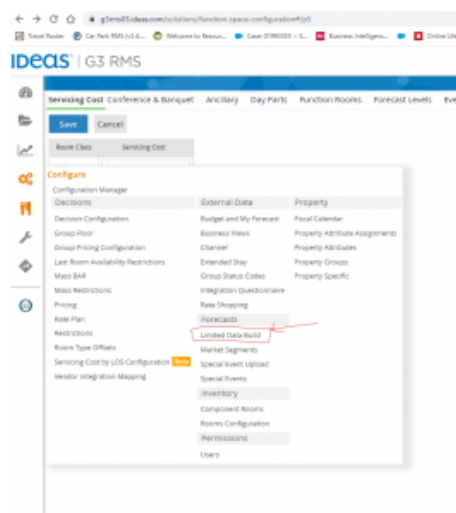

Limited Data build checkbox during add property

- User need to select Limited data **build** checkbox during add property workflow. Once user selected this checkbox, then no need to
- configure values of **LimitedDatabuild** and **LimitedDatabuildInputLocation**

Client facing Limited Data Build Screen

If property is LDB, then user can see Limited Data **build** section under Configure section

Projected Rooms Sold and Revenue – Projection template Export (Client facing only)

1. External user is able to export a projections .xlsx or .xls file having all a value of 0 for every market segment for every date
2. User can specify the start date and end date for the template
3. The end date must be no more than 730 days after the start date
4. The resulting file will be formatted as an Excel Workbook (*.xlsx)
5. The resulting file will contain a single worksheet named "Projected Data Template"
6. The worksheet will contain a row for each market segment for each day in the date range
7. The following columns are populated in the worksheet:

Column A: Date (Date format)

Column B: MS (General format)

Column C: Projected Rooms Sold (0)

Column D: Projected Room Revenue (0)

8. If property belongs to Hilton Projection MS list is pre-populated to include the standard 15 MCAT codes)
(BAR,CONS,CMP,HOU,GT,CMTG,CONV,SMRF,GOV,PERM,DISC,MKT,IT,LNR,CNR)
9. If property belongs to Hilton and have extended stay setting ON then in addition to 15 MCAT code – Tier1/Tier2/Tier3 MS codes should also get added depending on how they are configured. For some properties it can be just Tier1/Tier2 for some Tier1/Tier2/Tier3. Exported MS list should have as per property.

Projected Rooms Sold and Revenue – Projection template Import

During importing Projected Rooms Sold and Revenue

1. Support -> limited data build
2. Import projection template and notice the below validations present.

Validations present while importing projections

Client facing – Data build information

Selecting Clone Pattern, IDEaS Generic Pattern OR
Patterns learn from my property data

1. End User can select any one of the option depending on property

Historical Data Used for Forecasting start date:

Client needs to be update the date. This date is also known as Real Data start date

LDB Property Rollback – Only Hilton/ES

1. User needs to be rollback **LDB property via Support-> Installation.**

2.

For rollback there is one check present. If a user attempts to rollback an LDB property that uses a file-based integration (i.e. Hilstar, PCRS, and Rezview) and for which there is not at least one extract in the archive folder structure for yesterday and each of the 365 days immediately preceding yesterday, an error message is displayed informing the user that they must contact TechOps to have extract files restored from tape.

Auto LDB Periodically (For Hilton only)

- **Scheduled LDB Build** will check for each **Hilton LDB** property and if conditions are satisfied, then will pick those properties for Limited data **build** job.

▪

Schedule LDB Job: (Currently it will trigger every day). Below screenshot will look once schedule job runs.

Once any property is satisfied, then it will trigger Limited Data **build** job. Please see below:

LDB Lockout screen (For Hilton and Non Hilton)

- LDB subscription entitles me to be able to run the LDB job 2 times to account for changes to my LDB configuration and requires me to pay for each additional time. LDB screen (Configure -> Limited Data **Build** -> Configuration) will show **LOCK OUT** message once the Limited Data **Build** Job is run successfully.
- Also, client **cannot** save,
 - any patterns(CLONE, SELF CLONE, GENERIC options)
 - Import any projections
 - Cannot change CLONE/Generic patters
- All SAVE, Import buttons will be disable.
- Also, we can see whether the property is lock or unlock on property rollout page (Support -> Limited Data **Build**).
- **Internal Users are able to lock and unlock the LDB configuration from the Support=>Limited Data **Build UI** ("Action" option to the Property Rollout table).**

Members can change from Lock / Unlock of any properties after discussion with respective Manager's approval.

- Since the auto-Build process will capture LDB configuration changes every month with respect to the condition as the property should be in locked state. If property is unlocked, then Auto Build will not process.

Property Rollout Page (LDB Properties details screen)

- Internal users can view all the LDB properties and it's configurations in Support -> Limited Data Build section.
- Internal users can see LDB build history dates which can show details about the build run (e.g. Manual / Automation – Clone/Self / Generic)
- Internal users can lock/unlock the properties on manager's approval
- Internal users can see when RT attributes not mapped, MS not attributed, stage details, user info etc.

RoomType/Market Segment Changes (Client Facing)

Non Hilton Properties

- Currently, internal users was able to View or Add Market Segment and Room Types from Support -> Limited Data Build -> Room Type/Market Segment tabs. Now internal users is able to view only MS/RT from Configure -> Limited Data Build section. From support-> Limited Data Build, MS/RT tabs has been removed. MS/RT now is client facing and client can ADD MS and RT.
- To view for external users, there are also 2 conditions:
 - If there are zero extract processed and LDB job is not run, then client can see MS and RT tabs in Configure -> Limited Data Build
 - If 1st extract is processed and LDB job is not yet run, then client can see only MS tab. RT tab will not display
 - If 1st extract is processed and LDB job is completed, then client will not see MS and RT tab.

Hilton Properties

- Hilton external users will not see MS and RT tabs in any of the cases.

In case of any job failure, please contact QA resource.

G3 Limited Data Build Process for Component Rooms

[Reference Document_G3 Limited Data Build Process for Component Rooms.docx](#)

This document serves as a resource for Client Project Managers and Client Services to assist with implementing Limited Data Build for properties utilizing Component Room functionality in G3 RMS.

It outlines the different approach a Project Manager undertakes to procure the projected rooms sold and revenue data from the client and provide it to the Revenue Optimization Analyst team, which manually handles certain aspects of the usually automated LDB process. It must be used in conjunction with document: [‘IDeaS for Success START – Component Rooms’](#), which is the primary guide to discovery, validation and implementation process for configuration and working with Component Rooms in G3 RMS.
