Overview

This process is part of the Installation and maintenance activity for a property using G3 RMS. Rate Shopping being a critical component of the pricing calculations and recommendations by G3 RMS, this document handles one of the activities related to Rate Shopping management which is when a property or set of properties move to another Rate Shopping Vendor.

Purpose

In order to manage the switch in Rate Shopping vendor for a property or properties using G3 RMS.

Intended Audience

The Installation team or any member who is managing the rate shopping or issues arising from or relating to rate shopping in G3 RMS.

Reasons for Switch in Rate Shopping:

1. A property has decided to change the Rate Shopping Vendor.
2. The ownership of the hotel has changed due to which there is a change in vendor.
3. The hotel has been re-branded due to which there is a change in vendor based on the chain standard.

Scope:

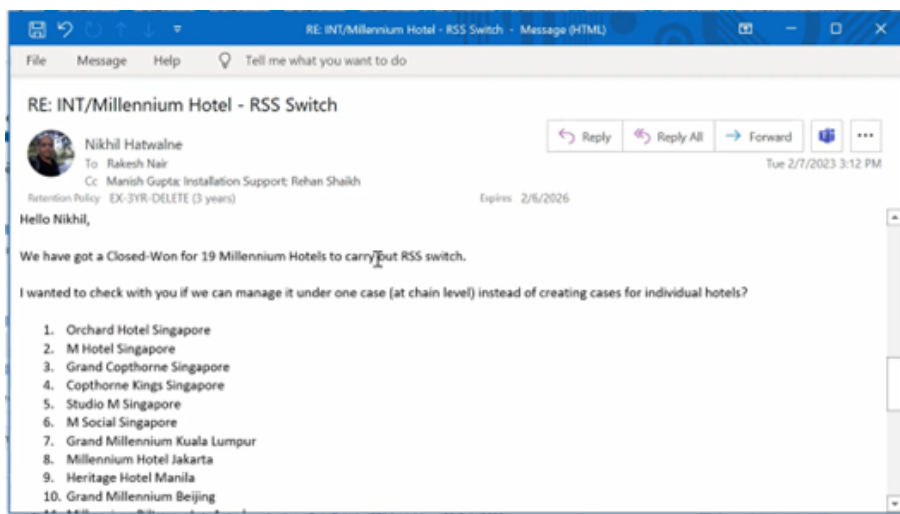

This document will cover the switch in Rate Shopping vendor:

1. The hotel has discontinued the contract with the existing Rate Shopping vendor.
2. The hotel is migrating from G2 to G3 RMS.
3. The chain has some hotels on G2 and some on G3. They are changing the Rate shopping vendor for properties using either G2 or G3 RMS.
4. There could be chains like ACCOR which uses multiple vendors, but per property only one vendor.

Procedure

Entry criteria and Input Validation

Email from Client Services:

The CRM/ CPM will discuss with the client various criteria:

1. Whether the old data need to be wiped out
2. Whether the data need to be overridden

Casework:

A case will be created with the subject as Rate Shopping Configuration as shown below.

In this example, the property – Mercure Hotel Hamburg Mitte (H5394) belonging to the ACCOR chain needs to switch the rate shopping vendor .

Current : Rategain

New: OTA Insight

The case has a workflow associated with it.

The case is opened by the CPM wherein the CPM also mentions the vendor.

In this case the client mentioned that they do not want the decisions from IDeaS during the migration process.

Process:

Task 1: The first task is RS#1- GFT Properties configuration to be performed for Rate Shopping migration cases.

1. Configuration is done via Jenkins à G3Support-RSSConfigurePropertyàrebuild

Here, enter the Application, G3 Dropzone, Propertycode/Property Account ID, Property Name, Rate shopping extracts pattern.

Note: Prod 1 and 2 are for Hilton and ESA respectively.

Once the “Rebuild” button is clicked, the property will get entered on the index page under the respective Rate shopping vendor with zero “0” feeds.

Task 2: **RS#2 Email and Request form dispatched** This should be assigned to the case owner (CRM/CPM). They will communicate to the new Rate shopping vendor.

Task 3: **RS#2a Consideration for Older Vendor** This should be assigned to the case owner (CRM/CPM). They need to communicate with the client and set the expectation regarding the data clean up.

Task 4:

RS#2c Client clears old RSS feeds from application and database This should be assigned to the case owner (CRM/CPM).

If any competitors or previous data received from former RSS application needs to be cleared from the RMS (prior to populating the RSS feeds from new RSS application) the client can be instructed by Case Owner to do this in GUI.

Task 5: **RS#3 Population of Shopping file**

****If the property is in Data Capture mode, do not trigger the Rate Shopping Catchup.**

Verify if the extracts are received from the new vendor. Follow the steps below:

1. Copy the property name from the case :

2. In the ASP Scripts Index <http://aspscripts.ideasprod.int/> click on Rate Shopping Info.

If the extracts are received, proceed with the catchup. If not, follow up with CRM/CPM.

Use Jenkins: Enter the following in search: **G3Support-RssExtracts-Catchup**

After triggering the Build, click on build number and go to Console Output as below:

In the console output verify the number of files for the property when catch up is initiated.

Task 6: **RS#3a Restart Instance**

Use Jenkins

Place the following in Search: **G2Support-Service-Status**

Click on G2-Production Tools Report

Following will be the output:

Click on RESTART for the particular RSS instance. Example : RSS02

Task 7: **RS#3d Remove older vendor configuration(if applicable)**

Now, we need to remove the old configuration.

1. Check for the property in the ASP Scripts Index <http://aspscripts.ideasprod.int/>
click on Rate Shopping Info.

Click on [Rate Shopping](#) Info link to see the list of vendors for G2 and G3 as seen below. This list will be updated based on any addition or deletion of vendor. Every row in the list is an instance.

Consider the case for Rategain. Click on RSS-9 as shown below:

3. Now, refer to the “Rate Shopper” column. You see PriceGain à for G3. Under the “Site” column, click on “G3_rss-9”. The following will be displayed.

Search for the property mentioned on the case. You could use the account id or the property name. You will see the property and the number of extracts in the 2nd column.

The following index page will display for this hotel displaying the extracts which are in the form of zip files.

The extract name contains the account id, date (yyyymmdd) and time stamp.

Now, run the build as shown below in Jenkins to remove the property from RSS-9 under Rategain.

Task 8: **RS#3c Monitor Auto Processing for RSS Data Feed** For the SPM team to monitor Auto Processing for RSS Data Feed for 2 iterations

Task 9: **RS#4 Confirm client Web Rate impacted BAR setup.** This should be assigned to the case owner (CRM/CPM). The CRM/CPM will ask the client to complete the configuration of the reference channels and competitive market positioning configuration.

Task 10: **RS#5 Update SFDC** This should be assigned to the case owner (CRM/CPM).

CPM to update “select integrations” on the order.

For additional information:

Whenever the client deletes the data, the RSS data the following screens will not display any data. The Client will need to delete the information in each tab : Room Class Mapping, Channel Settings, Competitor Settings. After deletion the Save button must be clicked.

Verify the re-populated data in the tabs as shown below:

This ensures that the data gets cleaned up from G3.

The system will re-populate the fresh data.

Exit

- Close/ action the tasks in the workflow as mentioned in the task description.

Closure

- Complete 'Peer Review' task

Escalation Path

- Client Relationship Manager
- QA

ICS_IM – Rate Shopping Steps – Set of ACCOR-20230208_121906-Meeting Recording.mp4

Audit Points:

1. Verify the re-populated data in the tables – for new Rate Gain Vendor
2. Verify the new data from the extract Index <http://aspscripts.ideasprod.int/>
3. Check the old vendor is removed or not for specific property
