G3: Rate Shopping_G2 to G3 RSS Migration/ G2 &G3 RSS Parallel Processing

This is a two-pronged process:

a. G2 and G3 Parallel Processing

Owner: Hrishikesh Ingawale

Overview

This process is to be used for parallel configuration of Rate Shopping in G2 and G3 RMS.

Purpose

Follow the steps mentioned in this document in order to set up Rate Shopping in G2 and G3 RMS.

Intended Audience

ICS Team members

Input

The request is submitted by the CRM/CPM via a case stating the request to configure a particular property for receiving and processing Rate Shopping file from

GiftService Parameters

Parameter	Value
Upload Buffer Dir	D:\v5i\files\glb2205int\uploads\rss-16\1503-0065
Push Decisions	False
Property Name	Shangri-La Hotel Vancouver
Extract File Pattern	1503-0065*RSS.zip
Do Upload	True
Decision File Pattern	None
Extract Processor URL	https://172.19.204.107:33065/slim1503-13
Incoming Extract Dir	D:\v5i\files\glb2205ext\extracts\rss-16\1503-0065
Outgoing Decision Dir	D:\Temp
Upload Buffer Dir For G3	
PMS Type	DEFAULT

V5i Parameter

Property Code	49327
---------------	-------

As this is G2 and G3 parallel Migration we've to keep both the RSS Feed population alive at a time.

To do so we simply need to update the "Upload Buffer Dir For G3" parameter section with the buffer directory URL of the respective PROD where the G3 property resides.

Below are the Buffer Directory URLs for the PRODs:

For PROD 2: D:\v5i\files\glb2201int\G3\rss-1\ESA

For PROD 3: D:\v5i\files\glb2201int\G3\rss-1\G3ProdCluster03

In above example the G3 Property has been configured/installed on PROD 3 hence we'll use the PROD 3 Buffer directory URL as shown in below image:

Once this URL is updated click on the “Save” Button.

Restart the respective “RSS Instance” from Jenkin by running the job “G2Support-Service-Status” and then select the particular RSS Instance then click on “Restart” button.

Monitor the Job from “Console Output”.

Update the Task comments and close the task.

Then to populate/process the G2 RSS Feeds parallelly into G3 we’ve to update the Web Rate Source and Alias via next subsequent Task “RSS-MIG1: Configure Property Web Rate Alias in G3”

To do so Go to the respective PROD -> Opent the property in Installation -> Go to “Core Settings” and update the Rate Shopper Vendor and ID as shown in below image :

Then we need to process/populate the received G2 RSS Feeds into G3, to do so we need to log in to Jenkins once received the task “RSS-MIG4: Population of Shopping file”.

Go to Jenkins G3Support-RssExtracts-Catchup

Click on **Build** with Parameters: Inputs would be as follows:

Fill each and every details with carefully and without any unwanted space. The instances and the RSS Application are as below:

To Select the correct RSS Application like RSS 1,RSS2 and so on check the link:
http://aspcripts.ideasprod.int/rateshopping_info/

Please Note that while G2 and G3 Parallel processing we have to set the
“G2G3_Mgr” parameter as Yes.

Review all the above selections carefully once again and then hit the Build button to run this job.

Monitor the job by checking the “Console Output”. Typically this should be successful if all information is correctly keyed in.

You can also monitor these jobs in the G3 application under Support>monitoring dashboard>jobs. This will take some time to process – depending on the number of RSS extracts in the dropzone.

To verify whether this was completed correctly – Go to the G3 application and verify if rate shopping information is populated in different reports/screens.

Audit Points:

1. Check the buffer directory is updated or not in G2 and G3
2. Check all the jobs are completed with successfully
3. G3 application and verify if rate shopping information is populated in different reports/screens for specific property

b. G2 to G3 RSS Migration

Input:

Case from the CRM/ CPM. A case is opened by the Client Project Manager (CPM) or Client Relationship Manager (CRM) for CARE such as the one below for G2 to G3 RSS Migration.

Follow the steps under:

Audit Points:

- 1. Check the Rate shopping set for a specific property – <http://aspscripts.ideasprod.int/>
- 2. Check all the extract files are available in a folder by using <http://aspscripts.ideasprod.int/>
- 3. Check all the jobs are completed successfully.
