G3/ SynXis Full Overlay or Initial Upload of Daily BAR from IDeaS G3 RMS

Issue

We appear to have discovered a challenge with SynXis uploads from IDeaS G3 RMS for properties uploading Daily BAR where a Full Upload of Daily Bar Rate Plan Values is sent and where Chunking is active.

Sabre are currently investigating an issue with the way they are handling the these messages where the full upload (overlay) is chunked.

Symptoms

If this issue is encountered – when we run the full upload, all rates are removed from the Daily BAR Rate Code IDeaS is uploading to with the exception (in most cases) of the final chunk sent.

This was the issue observed in Case [02478052](#) whereby the decisions were being zeroed after the full overlay of Daily BAR.

Workaround

Until further notice – please implement the following process change for SynXis properties if you are requested to perform a Full Upload of Daily BAR (pacman.integration.synxis.DailyBAR.uploadtype = Full):

[HLTN/Handling Error for SAS Dataset Encoding Job](#)

- Please ensure that `pacman.integration.synxis.useSoapChunks = False` for the property until the full upload for Daily BAR is complete
- `integration.synxis.useSoapChunks` should be set back to True once the full decision delivery job is complete

This applies in all instances of a Full overlay of Daily BAR messages (BAR by Day and Daily Continuous Pricing properties) to SynXis from IDEaS G3 RMS, including:

- The first/ initial upload of decisions
- Any client request for a full upload of Daily BAR to SynXis
- Internal (CRM/ CPM request) for a Full overlay.

Please note, this only applies to properties already uploading Daily BAR to SynXis (`pacman.integration.synxis.DailyBAR.uploadtype < > none`). Other decision types i.e. BAR by LOS/ BAR by LOS by Room Type/ Overbooking or Hurdles are not impacted.

A case to track this internally has been opened [here](#). Please ask if you have any questions
