[HLTN/Handling Error for SAS Dataset Encoding Job](#)

Issue Description

During the execution of the `sasDatasetEncodingStep` Step, the following error may occur:

*ERROR: File INLIB._FCSTCTLG_LOW.CATALOG was created for a different operating system.
Please refer error logs for more details.*

This error typically occurs when a **SAS catalog** is created on one operating system and then accessed or processed on another, resulting in compatibility issues. Catalogs are not portable across different operating systems due to platform-specific encoding and architecture.

Resolution / Handling Approach

- Do not resume the job — allow the job to continue execution despite the error.
- Just continue the failure.
- The job should complete successfully as the impacted catalog file is not required for subsequent steps.

Additional Notes

- Always review the complete error log to ensure that no other critical errors are present.

👍 +1
