HLTN/Handling Zero Capacity Accommodation/Room Type Issues – CPOptimalPriceToBARStep

Problem Statement:

When processing accommodation data, the system may encounter an error similar to the following in the step CPOptimalPriceToBARStep:

Decisions missing for accom type(s) used for consortia free upgrade: [Product=PBCFN6].
Accom Type(s): Q2E (Accom type has zero capacity)

This typically indicates that a room type in the inventory message has a capacity of zero and is not properly configured in the decision configuration settings.

Example:

Job Instance Id : 316338985	Problem Id : 1528712	Client Code : Hilton Client Name : Hilton
Job Name : NGI Deferred Delivery Job	Owner : Rishikesh Kunte	Property Code : DOHNZ Property Name : Waldorf Astoria West Bay Doha
Step Name : CPOptimalPriceToBARStep	Creation Date : 20-Mar-2025 17:57:08	Problem Description
System Mode : Decision Delivery Mode	Closed Date : 21-Mar-2025 01:36:32 AM	Tetris Errors: [0 - UNEXPECTED_ERROR - Decisions missing for accom type(s) used for consortia free upgrade: [Product=PBCFN6] Accom Type(s): Q2E Accom type has zero capacity] - User.id: null - Workcontext: null]
Creation Date : 20-Mar-2025 16:42:30 PM	Duration : 07:39:24	
	Error Code : UNEXPECTED_ERROR	
	Node : mn5pg3xapp1102.ideasprod.int

After:

Add Room Type Mapping

Room Type	Vendor Room Type	
Q2D	Q2T	
K1T	K1E	
K1E	K1ERP1	
K1D	K1T	

Root Cause:

- The system receives an inventory message where the affected room type has zero capacity.
- The room type exists in the **Vendor Integration mapping screen** but is not configured in the **Decision Configuration screen**.
- This mismatch causes the decision processing to fail.

Troubleshooting Steps:

1. **Identify the Affected Accommodation Type(s) / Room Type(s)**
 - Carefully examine the error message to pinpoint the specific accommodation/room type(s) causing the issue.
2. **Check Vendor Integration Mapping**
 - Navigate to the Vendor Integration mapping screen and confirm if the room type is listed there.
3. **Check Decision Configuration**

- Open the Decision Configuration screen and check if the room type is missing under Zero Capacity Room Types requiring Pricing only.

Resolution Steps:

1. There are two ways to resolve this issue:

- **Preferred Solution:** Remove the room type from Vendor Integration mapping if it is not required for processing.
- **Alternative Solution:** If the room type must be processed, add it under Zero Capacity Room Types requiring Pricing only in the Decision Configuration screen.

2. Communicate with the Client

Once the investigation is complete, inform the client about the issue and the available resolution options.

Use the following email template:

Email Template

Subject: <Chain Code>/<Property Code> – GRO – Processing Failure – Zero Capacity Room Type – <Date> <Month> <Year>

Hello GRO Support,

Greetings from IDEaS!

We would like to bring to your attention a processing issue for the following property:

- **Property Code:** [Insert Property Code]
- **Property Name:** [Insert Property Name]

Upon investigation, we have observed that we are receiving 0 capacity for the room type [Insert Room Type] in the inventory message.

Additionally, this room type is not configured in the Decision Configuration screen but is present in the Vendor Integration mapping screen.

To resolve the processing issue, there are two options:

1. Remove the room type from Vendor Integration mapping (Preferred option)
2. Configure the room type in the Decision Configuration screen under Zero Capacity Room Types requiring Pricing only

Could you please review this and update it accordingly?

If you have any questions or concerns, please do not hesitate to email us at CARE@ideas.com.

Thanks and Regards,
[Your Name]

Note: You need to abandon the failure so that they can take action on this.
