HLTN/How to trigger processing for a file-based property

This document illustrates the process of triggering the processing for the file-based properties.

1. Open WINSCP and enter the hostname as gro-prod.hilton.com. The username is ideas and the password is provided to you in SSH (check with the Shift Leads). Now search for the extract by property name in the extract folder on gro-prod.hilton.com. If you are unable to find it, check in 'ack' (acknowledgement) folder.
2. Now download the extract on your local PC.
3. Then copy the extract to the extract folder on gro-prod.hilton.com
4. Once this is done, go to the property's installation screen and check for Agent ID.
5. Then go to the IDG Agent screen. Click on Actions of the required Agent ID and select edit. Now go to Schedule Job. Then use the JEMSPullExtract task (whichever is active, and not disabled). Click on Actions again and click on Run Now.
