HLTN/Processing Issue – linkedSRPRateCalculationForStreamingStep – SRP Configuration Issue

This document illustrates the investigation and resolution steps for the processing issue observed in step “linkedSRPRateCalculationForStreamingStep”.

Job Name: NGI CDP Deferred Delivery Job

Step Name: linkedSRPRateCalculationForStreamingStep

Problem Description :

Tetris Errors: [0 – UNEXPECTED_ERROR – Negative value found for:- RateQualifiedDetailsEntityDto(rateQualifiedId=228, startDate=2024-07-13, endDate=2024-07-18, accomTypeld=2, sunday=5.00000, monday=5.00000, tuesday=-10.00000, wednesday=-10.00000, thursday=-10.00000, friday=-1.00000, saturday=-9.00000) – User.id: null – Workcontext: null]

Investigation Steps:

1. Find the Rate Code Name SRP name RateQualifiedId=228. To do so use the below query :

```
select * from rate_qualified where rate_qualified_id=<id_error>;
```

Exmaple:

```
select * from rate_qualified where rate_qualified_id=228;
```

Select Chain

Select Delimiter

KWDEH - Hilton Kuwait Resort

Query Set:

select * from rate_qualifed where rate_qualifed_id=226;

Upload File:

Choose File

No file chosen

Run and Display

Run and Export

Result

Rate_Qualified_ID	File_Metadata_ID	Property_ID	Rate_Code_Name	Rate_Code_Description	Remarks	Rate_Code_Currency	Start_Date_DT	End_Date_DT	Yieldable	Price_Relative	Reference_Rate_Code	Includes_Package	Last_Updated_DT19M	Status_ID	Created_By_User_ID	Created_DT19M
226	24047	953251	PR485R	ACCENTURATE LT RATE BASED ON RDS AND BREAKFAST SUBJECT TO 15 PER ROOM	CORRESPONDENCE GUARANTEED BY COMPANY EXCLUSIVE FOR ACCENTURATE EMPLOYEES EXCLUSIVE TO		2023-12-15	2027-07-13	1	0	None	0	2024-07-13 01:02:06.49	1	3	2024-03-18 17:31:08.317

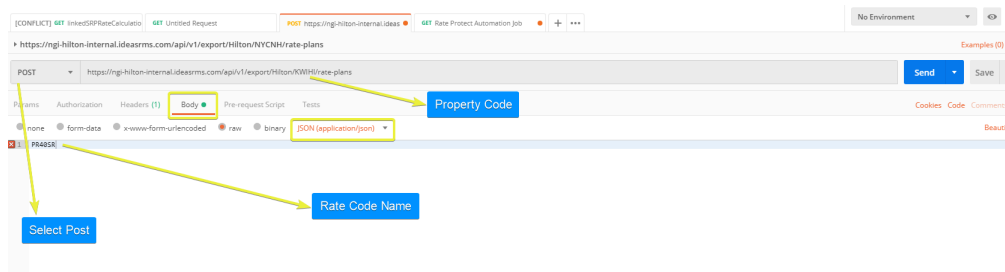

2. Note down the Rate Coe name.

3. Post the below URL in the Postman app and pass the Rate Code name in the Body.

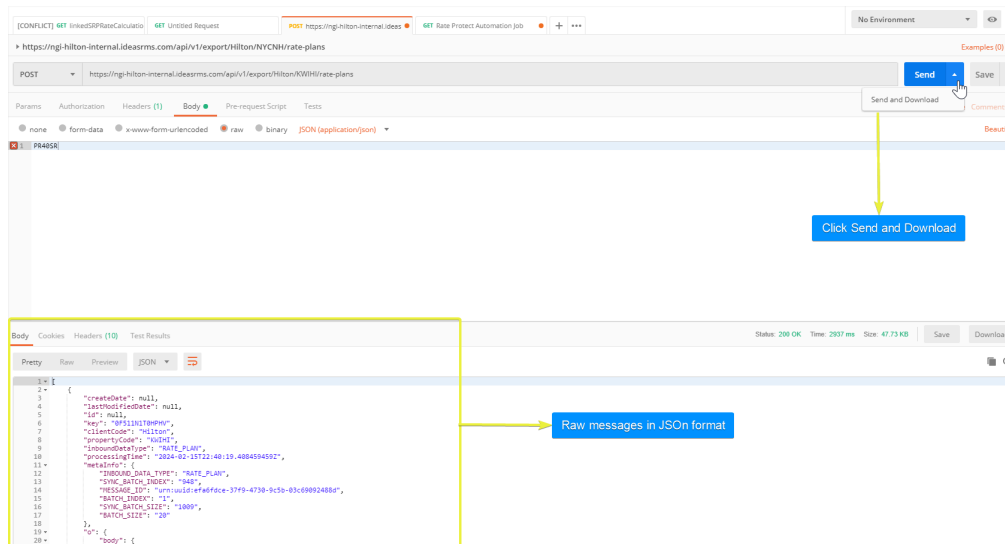

https://ngi-hilton-internal-ideasrms.com/api/v1/export/Hilton/<Property_code>/rate-plans

For example :

Refer below snippet :

4. Click the Send and Download button.

5. Save the file in .json format.

6. Open the File in Notepad++

Ranjit on [Processing Failures Due to Data Type Mismatch for MGM Resorts](#)

Ranjit on [Accor Client Handling Process Guide](#)

7. From Notepad ++ format the file in JSON.

8. From the error note down the Start Date and End Date.

For example in the above case “startDate=2024-07-13, endDate=2024-07-18”

9. Now go back to the RAW messages in Notepad ++ and look for the active Period for these messages. The date range in error messages should be within the Start and End Date of active period.

For example – “startDate=2024-07-13, endDate=2024-07-18” is within the range of active period as shown above.

10. In the RAW messages for the failure range, we will check the Rate Type within the active period.

The Rate Type in messages can be rack, amountofrack, percentofrack, etc.

The calculation of the final bar depends on the rate type we are referring to. For example, if the ratetype is Rack the system will consider this as a final bar. When rate type in amountofrack the system will subtract the amountofrack value from the current final BAR and consider the result as the final BAR.

When we receive amountoffrack value greater than the final BAR value the calculations result in a negative value causing the processing failure.

11. Now for the active period and the range in error look for amountoffrack rate type.

12. Note down the minimum amountofrack value. In this case the minimum amountoffrack value is “145”.

13. Now find the final BAR value. To find the Final BAR value, use any of the below queries :

```
select top 5 arrival_dt, product_id, final_bar from cp_decision_bar_output where  
arrival_dt >= getdate() and product_id=1 and accom_type_id=<accom_type_id from  
error> order by final_bar
```

```
select top 5 arrival_dt, product_id, final_bar from cp_decision_bar_output where  
arrival_dt between '2024-03-02' and '2024-11-04' and product_id=1 and  
accom_type_id=<accom_type_id from error> order by final_bar
```

In the above quires, the Product_id will always be 1. However, the accom_type_id and the date range will change as per the ID and startDate & endDate received in the error.

In our case the quires will be:

```
select top 5 arrival_dt, product_id, final_bar from cp_decision_bar_output where  
arrival_dt >= getdate() and product_id=1 and accom_type_id=2 order by final_bar
```

```
select top 5 arrival_dt, product_id, final_bar from cp_decision_bar_output where  
arrival_dt between '2024-07-13' and '2024-07-18' and product_id=1 and  
accom_type_id=2 order by final_bar
```

14. Now note down the minimum final bar value from the above output. In this case, it is 134 or 135.

15. Now subtract minimum final BAR value – minimum amount off rack value.

In our case, it will be $134 - 145 = -11$

or $135 - 145 = -10$.

You will see this -10 in the error that we have received.

The system will consider the final BAR as -10. We cannot have the final BAR in negative.

This negative final BAR has caused the processing failure.

To resolve this the client has to correct the SRP configuration at their side.

RESOLUTION STEPS:

1. To resolve this issue client has to correct the SRP configuration at their side.
2. Draft an email as below in our case. Do not send the email now.

Hello GRO Support,

We encountered an issue with the amount of rack for the property KWIHI.

The final BAR for room type D1WFF2 is 135 and we have received the amount off rack as 145. While processing this, the calculations has resulted in negative value causing the processing issue.

Please be aware that as of now the SRP PR40SR will be managed as yield LV0.

Kindly review the SRP configurations promptly and make the necessary corrections.

After correcting the configurations, ensure that the “Ignore PMS/CRS updates” and “Do not Generate Restriction” options are unchecked in the Restriction Configuration for GRO for PR40SR.

3. To push the processing, we will need to manage the SRP/Rate Code as LV0.

4. Use the below query to do so.

```
declare @rate_qualified_id int =<rateQualifiedId from the error>
declare @system_date date = (select max(SnapShot_DT) from File_Metadata where
Record_Type_ID=3 and Process_Status_ID=13 and File_Name not like '%pace%')
```

```
update rate_qualified set Rate_Qualified_Type_Id=2, Managed_In_G3=1, Yieldable=0
where Rate_Qualified_id=@rate_qualified_id
update Rate_Qualified_Details set Sunday=0, Monday=0, Tuesday=0, Wednesday=0,
Thursday=0, Friday=0, Saturday=0 where Rate_Qualified_ID=@rate_qualified_id and
End_Date_DT>@system_date
```

Example :

```
declare @rate_qualified_id int = 228
declare @system_date date = (select max(SnapShot_DT) from File_Metadata where
Record_Type_ID=3 and Process_Status_ID=13 and File_Name not like '%pace%')

update rate_qualified set Rate_Qualified_Type_Id=2, Managed_In_G3=1, Yieldable=0
where Rate_Qualified_id=@rate_qualified_id
update Rate_Qualified_Details set Sunday=0, Monday=0, Tuesday=0, Wednesday=0,
Thursday=0, Friday=0, Saturday=0 where Rate_Qualified_ID=@rate_qualified_id and
End_Date_DT>@system_date
```

5. Resume the failure.

6. Once it passes the failed step. Notify the client as drafted above.

EMAIL TEMPLATE:

Subject line HLTN/<Property Code> – GRO – Processing Failure – SRP incorrect
setup – <Date> <Month> <Year>

Hello GRO Support,

Greeting from IDeaS!

This is to inform you of a <BDE/IDP1/IDP2,...> processing issue affecting for the
below property:

Property Code: <Property Code>

Property Name: <Property Name>

The final BAR for room type <Room_Type_Name> is <min_final_BAR_value>, and we
have received the amount off rack as <min_amount_off_rack_value>. While
processing this, the calculations have resulted in a negative value, causing the
processing issue.

Please be aware that as of now the SRP <Rate_Code_Name> will be managed as yield LVO.

Kindly review the SRP configurations promptly and make the necessary corrections.

After correcting the configurations, ensure that the “Ignore PMS/CRS updates” and “Do not Generate Restriction” options are unchecked in the Restriction Configuration for GRO for <Rate_Code_Name>.

Thank you for your swift attention to this matter.
