HLTN/Processing failure – cdpNgiLoadSasDatasetStep – XMLMap is not properly formed

This document guides you on how to address processing failure observed in NGI CDP Deferred Delivery Job/ Deferred Delivery Job

Problem Description:

Unable to determine problem, please see logs for details

STEPS FOR INVESTIGATION:

1. Navigate to the problem.
2. Download and open the SAS log. The log will look as below :

ERROR: XMLMap is not properly formed.
Construct occurrence of ORDINAL conflicts with version in TABLE SASRequest. Ordinal construct assumed. Processing continuing.
NOTE: This XMLMap requires update conversion. The XML Mapper utility (version 9.2 or later) can automatically convert most content to a correct, specific XMLMap version.
ERROR: XMLMap is not properly formed.
Construct occurrence of ORDINAL conflicts with version in TABLE RequestHeader. Ordinal construct assumed. Processing continuing.
NOTE: This XMLMap requires update conversion. The XML Mapper utility (version 9.2 or later) can automatically convert most content to a correct, specific XMLMap version.
ERROR: XMLMap is not properly formed.
Construct occurrence of ORDINAL conflicts with version in TABLE RequestHeader. Ordinal construct assumed. Processing continuing.
NOTE: This XMLMap requires update conversion. The XML Mapper utility (version 9.2 or later) can automatically convert most content to a correct, specific XMLMap version.
ERROR: XMLMap is not properly formed.
Construct occurrence of ORDINAL conflicts with version in TABLE OperaPopulationRequest. Ordinal construct assumed. Processing continuing.

The error in the log indicates that the XML was not formed properly. If the logs look exactly like the above, follow the below steps

STEPS FOR RESOLUTION :

1. Navigate to Support > Admin Tools
2. Under the Database Tools, Open the SAS DB Utility Tool.
3. Select the Client and Property Code.

4. Insert a dummy entry into tenant.mkt_accom_los_inventory table using the below query :

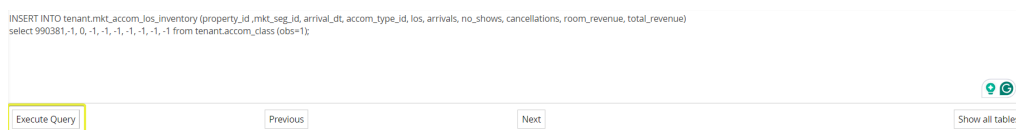

```
INSERT INTO tenant.mkt_accom_los_inventory (property_id ,mkt_seg_id, arrival_dt, accom_type_id, los, arrivals, no_shows, cancellations, room_revenue, total_revenue) select <property_ID>,-1, 0, -1, -1, -1, -1, -1, -1 from tenant.accom_class (obs=1);
```

Example :

For the property AAHHX the property Code is 990381. So the query will be as below :

```
INSERT INTO tenant.mkt_accom_los_inventory (property_id ,mkt_seg_id, arrival_dt, accom_type_id, los, arrivals, no_shows, cancellations, room_revenue, total_revenue) select 990381,-1, 0, -1, -1, -1, -1, -1, -1 from tenant.accom_class (obs=1);
```

5. Execute the query by clicking on the “Execute Query” Button.

6. Resume the failure.

7. Let the processing complete. Once the processing is completed, execute the below query to delete the dummy entry.

```
delete from tenant.mkt_accom_los_inventory where mkt_seg_id=-1;
```
