HLTN/Troubleshooting Outbound Event Errors (500/502/503/504)

Description:

This document outlines the procedure for handling outbound event transmission failures with error codes 500, 502, 503 & 504. These errors indicate a problem with sending data to the client’s URL.

Error Messages:

Error Messages:

- 500 Internal Server Error: “Failed to send the decisions : javax.ws.rs.ProcessingException: Error sending Outbound Event 500” followed by an HTML response indicating a generic server error.
- 502 Bad Gateway: “Failed to send the decisions : javax.ws.rs.ProcessingException: Error sending Outbound Event 502” followed by an HTML response indicating the server returned an invalid or incomplete response.
- 503 Service Unavailable: “Failed to send the decisions : javax.ws.rs.ProcessingException: Error sending Outbound Event 503” followed by an HTML response indicating no server is available to handle the request.
- 504 Gateway Timeout: “Failed to send the decisions : javax.ws.rs.ProcessingException: Error sending Outbound Event 504” followed by an HTML response indicating a generic error occurred while processing the request.

Affected Jobs:

You might encounter these errors with the following jobs:

- NGI Hilton Decision Delivery Job
- NGI Hilton FPLOS Decision Delivery Job
- Manual Bar Decision Upload Job
- Hilton Inbound Data Retrieval
- Hilton Error Events Retrieval

Cause:

These errors are typically client-side issues, likely caused by:

- **500:** An unexpected error or misconfiguration on the client’s server. This could be due to various reasons like application errors, database issues, or server resource limitations.
- **502/503:** Intermittent connectivity problems on the client’s end.
- **504:** A timeout occurred while the client-side server was attempting to communicate with another server (e.g., an application server, database) to fulfill the request. This could indicate slow response times, network issues, or overload on the client’s infrastructure.

Action Items:

1. **Wait:** Since the job will already be in a failed state, wait for 15-30 minutes to allow for potential network recovery on the client side.
2. **Resume in Batches:** After the waiting period, resume the failed jobs in smaller batches to avoid overwhelming the client’s server.
3. **Escalate to Client:** Regardless of whether the job succeeds or fails after resuming, escalate the incident to the client. Use the appropriate email template below:

Successful Job Completion:

Subject: HLTN/Hilton Properties – GRO – Processing Failure – Disruption in Decision Delivery – <Date> <Month> <Year>

Hello GRO Support,

This email is to inform you of a recent temporary outage that affected data transmission to multiple Hilton properties. We have attached a list here.

We encountered [Error 500/502/503/504] while processing [Job Name]. The issue has since been resolved and all data has been successfully delivered.

We suspect this was caused by a temporary connectivity issue on your end. Please let us know if there has been any outage or unplanned maintenance from the Hilton side.

In case you have any questions or concerns, please do not hesitate to email us at CARE@ideas.com.

Unsuccessful Job Completion:

Hello GRO Support,

This email is to inform you of an ongoing issue with data transmission to multiple Hilton properties. We have attached a list here.

We are encountering [Error 500/502/503/504] while processing [Job Name]. We have attempted to resend the decisions, but the issue persists.

This may indicate a persistent connectivity problem on your end. Please investigate this urgently and take the necessary corrective action. We will continue to monitor the situation and provide updates as needed.

Note – There might be a delay in the subsequent optimizations due to this issue.

In case you have any questions or concerns, please do not hesitate to email us at CARE@ideas.com.
