HLTN/Handling Error for SAS Dataset Encoding Job

5. Copy the message to a new sheet and convert it to XML. (If you have the XML plugin you can use the shortcut 'Ctrl+Alt+Shift+B' to parse the message).
6. For the concerned failed date check the count of Decision using count feature in find ('Ctrl+F') mode.
7. Alternatively, you can also use the CMA query "To find out RT details for given occupancy date" to check the count of decisions for the concerned occupancy date compared to other dates.
8. The count should ideally be same for all Occupancy Dates and if you see the count to be correct, **please revert to the client and request them the room type list which is configured in CurtisC**.
9. If the count does not match for a certain date or dates, please follow the below steps for investigation:
 - i. Identify the missing room type for the occupancy date shown in the error.
 - ii. You can use the CMA query "Room Type List" to see the Room Types for the property.
 - iii. If there are any RTs missing in decisions, use the CMA Query "Room Type Pace Data for a concerned occupancy Date and Room Type" to check if there was zero capacity received for the concerned RT.
 - iv. If Yes, please send a full upload if the capacity has been correctly reinstated.

10. If none of the above steps are applicable for the failure, please escalate the issue to IDEaSG3 QA.
