Handling RSS failures

Overview:

This document aims to assist CARE team to address the RSS failure that we encounter daily.

Intended Audience:

CARE member with knowledge of CMA and G3 Screens.

Process:

The below are the failures and the actions that need to be taken across the PRODs.

1) not a valid value for 'NMTOKEN'

Ex:

Tetris Errors: [46 - UNMARSHALL_FAILED - JAXBException caught unmarshalling message - User.id: null - Workcontext: null] Cause : javax.xml.bind.UnmarshalException: null Cause : org.xml.sax.SAXParseException: cvc-datatype-valid.1.2.1: 'Studio/Hotel Room' is not a valid value for 'NMTOKEN'.

Tetris Errors: [46 - UNMARSHALL_FAILED - JAXBException caught unmarshalling message - User.id: null - Workcontext: null] Cause : javax.xml.bind.UnmarshalException: null Cause : org.xml.sax.SAXParseException: cvc-datatype-valid.1.2.1: 'Premier King Room' is not a valid value for 'NMTOKEN'.

The above error is encountered when there's an invalid character in the Room type within the RSS extract. In the above examples, space and '/' are the invalid characters.

[HLTN/Handling Error for SAS Dataset Encoding Job](#)

You can verify it by downloading the RSS extract from Execution Parameters of the failure job and search the above room type in the RSS extract. If the extract can't be downloaded, you can search it in the corresponding Index page.

Note: Underscore ('_') is the only valid character that's allowed in the Room type.

Action: We need to raise a task for CRM and ask him/her to liaise with the RSS vendor regarding the Invalid characters that we are receiving daily in the RSS extract leading to processing failure. Once done, abandon the job.

Reference Case: 02943083 (the case for reference is not CIA case, however whenever we escalate, we should enter as a CIA case)

2) Extract contains XXX currency which is different from database currency

Ex:

Tetris Errors: [182 - EXTRACT_CONTAINS_CURRENCY_DIFFERENT_FROM_DATABASE - Validation failure: Extract contains GBP currency which is different from database currency. For Client Code - ROTANA, Property Code - 0040 - User.id: null - Workcontext: null]

Tetris Errors: [182 - EXTRACT_CONTAINS_CURRENCY_DIFFERENT_FROM_DATABASE - Validation failure: Extract contains CZK currency which is different from database currency. For Client Code - ACCORHG, Property Code - 7051 - User.id: null - Workcontext: null]

Tetris Errors: [181 - EXTRACT_WITH_MULTIPLE_CURRENCIES - Validation failure: Extract contains Multiple currencies. For Client Code - ROTANA, Property Code - 0040 - User.id: null - Workcontext: null]

The above error is encountered when we receive a different currency within the RSS extract than the one which is already updated in the database (when the 1st extract was uploaded).

In the above example: when we download the RSS extract from the Execution Context of the failure job, you will find the currency as per the below screenshot (search with "currency"):

The currency of last successfully processed RSS extract is as below(you can filter the property in the Jobs section with "Process Web Rate Extract" job):

Kindly note that the above currency would also be the same as the one in the 1st RSS extract that was uploaded successfully.

Action: We need to raise a task for CRM and ask him/her to liaise with the RSS vendor regarding the incorrect currency that we are receiving daily in the RSS extract leading to RSS failure. Once done, abandon the job.

Reference Case: 03025347

3)

Unexpected error : Process Rolled Back

org.hibernate.exception.GenericJDBCException: Unable to acquire JDBC Connection Cause

java.sql.SQLException: IJ031070: Transaction cannot proceed: STATUS_ROLLING_BACK

The Microsoft Distributed Transaction Coordinator (MS DTC) has cancelled the distributed transaction.

Transaction (Process ID 1622) was deadlocked on lock resources with another process and has been chosen as the deadlock victim. Rerun the transaction.

javax.transaction.RollbackException: ARJUNA016053: Could not commit transaction

For the above failures, a simple resume should resolve the issue. Kindly resume it after 5 to 10 mins. If issue persists, then you can abandon the failure and monitor next RSS extract.

The MSDTC error usually occurs when there's a load on a server. You can find the server name "SAS Server Name" tab of the failure. To check the load on a server, you can check all the running jobs by going to "JOBS" tab of the Monitoring Dashboard and check if there are too many jobs running on that server. If so, you can resume the failure once the load ceases.

4) Source 'C:\G3\Data\rateshopper\work\XXXX-XXXX_XXXXXXXXX_XXXX_RSS.zip' does not exist

Ex:

java.io.FileNotFoundException: Source 'C:\G3\Data\rateshopper\work\2424-0001_20200826_1607_RSS.zip' does not exist

java.io.FileNotFoundException: Source 'C:\G3\Data\rateshopper\work\1679-0099_20200902_0600_RSS.zip' does not exist

When we encounter the above RSS processing error, we need to check if the above-mentioned extract was processed earlier. You can find it by filtering out the "Process Web Rate Extract" job for that property and check if the RSS extract was processed earlier prior to that failure. If yes, abandon that failure. If it was not processed earlier, then you need to liaise with the QA team via a task or on the team's channel.

5) No Property found for web rate alias XXXXX

Ex:

Tetris Errors: [0 – UNEXPECTED_ERROR – No Property found for web rate alias 25081 – User.id: null – Workcontext: null]

The above error is encountered if the RSS configuration is not properly done or not completely removed by the ICS team.

Note: We need to pull a report on a monthly basis and share with the ICS team to correct it.

Thank you Basil for documenting some of the known RSS failure handling scenarios.

@Basil Could you also confirm if we need to Email the client regarding the error we face.

The escalation should always go through CRM, however if any CRM asks us to liaise with the client, then you can go ahead and send the email. We escalate to CRM only for the NMTOKEN and Currency issue.
