Handling “Agent Alive” Exceptions from Monitor by Exception Screen

Document Owner: Aryan Ahir

Purpose:

This document outlines the step-by-step process for identifying, verifying, and escalating “Agent Alive” exceptions observed in the Monitor by Exception screen. These exceptions typically indicate a communication issue with an agent and require systematic checks before involving the client.

Summary

This document provides a structured approach to handling “Agent Alive” exceptions. By performing the required checks on agent and manager heartbeats, property modes, and agent types, and by following proper communication protocols, teams can efficiently diagnose and address issues before involving the client. This is especially critical in multi-client environments where coordinated communication is essential

1. Issue Overview

Exception:

“Agent Alive” exception in the Monitor by Exception screen.

Implication:

This exception suggests a potential communication failure between the system and the agent, which may impact data extraction or decision upload processes.

2. Pre-Escalation Checklist

Before escalating the issue to the client, perform the following mandatory checks:

2.1 Agent Last Heartbeat

- **Action:** Verify the agent's last heartbeat timestamp. It CST Time zone.
- **Criteria:** If the time difference from the current CST time exceeds the defined threshold (e.g., 30 minutes) in comparison to IST, it indicates a potential issue.

2.2 Agent Manager Last Heartbeat

- **Action:** Check the last heartbeat of the Agent Manager. It is CST Time Zone
- **Criteria:** Same as above. A significant delay suggests a broader connectivity or system issue.

2.3 Property Mode Verification

- **Action:** Confirm that the affected property is operating in one of the following monitored modes:
 - Decision Creation Mode
 - Decision Delivery Mode
 - Decision Population Mode

2.4 Agent Type Identification

- **Action:** Determine the type of agent involved:
 - **OPMS / OPMS ORS:** Used for data extraction and decision upload (based on configuration).
 - **ORS:** Dedicated to ORS decision uploads.
- **Note:** If the issue involves an ORS agent, clearly state in the communication that it pertains to a decision upload issue. Also, confirm whether ORS decision upload is configured for the property.

3. Action Required

After completing the above checks:

- **Escalation:** If the issue persists, escalate to the client with all the details including server name.
- **Email Communication:** When sending an email from the Agent Alive screen:
 - For multiple properties on single agent, verify the mode of each property before escalation to client.

4. Handling Multi-Client Scenarios

If the agent is associated with multiple clients:

- **Notification Protocol:** Follow the standard chain-wise notification procedure if the affected properties are high.

Contact Reference: Use SFDC (Salesforce) contacts to notify clients in the appropriate chain-wise order.

In case of any doubts please reach out to Seniors & Shift Leads.

👍 +1
