Highest/Lowest Decision Alert

Highest/Lowest Decision Alert

These alerts will be triggered for BAR as well independent product when all the decisions generated during the BDE/CDP flow are set to Ceiling value or Floor value. The period of consideration would be based on the process flow . i.e. if this is observed for BDE – then entire BDE decision window is generating say highest or lowest decisions then this alert is generated.

- This alert will pause the BDE/CDP processing until user actions the alert.
- User can action the alert with below options.
- If the user continues the processing, then depending upon selection it will again check for decisions or skip it.
- When user action with Ignore ONCE and continue processing then the processing will continue and after next BDE/CDP it will again get triggered if it has same condition
- When user action with Ignore ALWAYS and continue processing then this will not be triggered until the configuration parameter is update again
pacman.feature.HighestOptimizationDecisionCheck
pacman.feature.lowestOptimizationDecisionCheck
- If we need to provide information to client that which prices are set to floor or ceiling. This information can be retrieved using below queries saved on CMA
 1. Fetch Lowest Decisions Generated Days between date range
 2. Fetch Highest Decisions Generated Days between date range

For support teams : The OptimizationDecisionCheckStep will fail. As of today – there's no guidance whether communication to Hilton is expected for such failures by SPM teams . Mayuresh is going to work with Kamilah Bell from Enterprise team to further define action .

This is part of release 8.4.3 by team Bell. Support from Mayuresh Oka.
