Hilton Honors

Introduction

This is specifically for Hilton. With Hilton we do not get rates for Honor SRP reservation. However, even if they do not send us the rates in the yield file, we give it a value based on the occupancy for that day. The whole intention of this activity is to understand how we generate the rate of Hilton Honors.

Process of Calculation

The pricing is determined from the below criteria where it falls into.

A	B	C	D
Honors_Srps_Adjustent_ID	Hhnsrr_Occupancy_Percent	Low_Hotel_Occupancy_Percent	High_Hotel_Occupancy_Percent
1	0-5	55.00	90.00
2	6-10	65.00	95.00
3	11-15	80.00	110.00
4	16-20	75.00	110.00
5	21-100		130.00

■ Transient data

1. To begin with we need below data:

- No of total reservations for an occupancy data
- No of Hilton Honors
- Capacity of the property

- Calculate ADR for that occupancy date. Note, while calculating ADR our system takes into consideration all reservations excluding Hilton Honors reservations. Also, the rate (Formula : $ADR = \text{Revenue} / \text{Rooms sold}$)
- Find the percentage of total reservation divided by total hotel capacity. If the percentage is less than equal to 90% consider "Low_Hotel_Occupancy_Percent" (C column) or greater than 90% "Low_Hotel_Occupancy_Percent" (D column).
- Next, find the percentage of Honors reservations divided by total hotel capacity. Then, find in which criteria the percentage fits under "Hhnsrr_Occupancy_Percent" (B Column).
- So, take the percentage value from "C" or "D" column that corresponds to percentage value from point no.4 (B Column)
- Now, the percent value from point no. 5 of ADR is the rate of Honor SRP.

Note: The only condition when Honor SRP's value would be the same value as sent in the yield file, if the Honor SRP reservation percentage is between 21-100 % & hotel occupancy percentage is less than 90 %.

■ Group Block data

- Firstly, for group reservations manually calculate revenue by multiplying rooms available to
- Calculate total of reservations and total of revenue from point no.1
- Similarly, for transient reservations calculate the total revenue and sold of reservations excluding Honors SRP.
- Then, add the revenue & rooms sold of group to transient reservations and rooms sold and exclude the Hilton Honors SRP.
- Calculate ADR by dividing the room revenue to rooms sold from point no.4.
- Now, follow the point no. 3, point no.4 & point no.5 from Transient process.

The percent value from criteria table of the ADR from point no.5 is the rate of Hilton Honors SRP

Example

Transient Data

Let us take below example to understand the above explanation,

(Below Data is taken from the Ratchet dataset)

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z	AA	AB
hotelid	resid	doas	nites	dod	rooms	roomtype	srp	mkts	srpgrp	block	revenue	rate	staycost	nightcost	setcost	curr	rescode	transactonDate	bookingtype	ncld	naduit	walked	isdifferential	netta	oldroomtype	ratelevel	u

SEZIT	136254758000	7/1/2021	5	7/6/2021	1	K1DVB	HHNSRR	DISC		N	3245.67	649.13	0	0	0	EUR	A	1/21/2021	CD	0	2	N	0	0	K1DVB	LV0	
SEZIT	138428754000	7/1/2021	10	7/11/2021	1	D2DV	HHNSRR	DISC		N	6491.33	649.13	0	0	0	EUR	A	2/5/2021	CD	0	2	N	0	0	D2DV	LV0	
SEZIT	139564335000	7/1/2021	4	7/5/2021	1	K1TV	F0F	DISC		N	1620	405.00	0	-55	0	EUR	A	2/12/2021	CD	0	2	N	0	0	K1TV	LV0	
SEZIT	140422392000	7/1/2021	10	7/11/2021	1	K1TVP1	PR09B	MKT		N	15200	1520.00	0	-318	0	EUR	A	2/17/2021	CD	0	2	N	0	0	K1TVP1	LV0	
SEZIT	142446798000	7/1/2021	2	7/3/2021	1	D2DV	HHNSRR	DISC		N	1298.27	649.13	0	0	0	EUR	A	2/28/2021	CD	0	2	N	0	0	D2DV	LV0	
SEZIT	144422225000	7/1/2021	1	7/2/2021	1	K1QV	OCBGKQ	DISC		N	1071	1071.00	0	-318	0	EUR	A	3/9/2021	CC	0	2	N	0	0	K1QV	LV1	

In this case we have 7 total reservations for the occupancy date 1st July 2021 out of which 4 are Hilton Honors (marked in yellow). 41 is the total hotel capacity.

- To calculate ADR we take the values of rate before there is any deduction in night cost so the value we will sum up would be : $405 + 1520 + 1071 = 2996$.

ADR = 2996/3 = 998.67

- Find % of total reservations / hotel capacity i.e. 7/41 % = 17.07%. So this will be below 90% and would certainly fall into column "Low_Hotel_Occupancy_Percent" from above criteria.
- Find % Hilton Honors/ Hotel capacity i.e. 4/41 % = 9.75% (rounded value). so the score falls between 6-10 %
- This means, the corresponding value 6-10 % from column "Low_Hotel_Occupancy_Percent" is 65 %.
- Calculate 65% of ADR (from point no. 1) i.e. 65% of 998.67 = 649.13
- This would be the correct value (649.13) which will be seen for Honor SRP's.

Group Block data

To retrieve below data from ratchet data set please use queries:

SELECT * FROM ratchet.grpcvt where idate = '02MAY2021'd;

SELECT * FROM ratchet.srpm WHERE idate ='02MAY2021'd;

TUSHT	SLW	Q2RS	.	3/15/2021	5/2/2021	48	0	GRP	4	0	4	YYYYYYY	1	0	O	N	149	596	.
																		8857.98	

(Snippet 1: Group reservations)

(Snippet 2: Transient reservations)

In this case we have 87 total reservations for the occupancy date 03rd May 2021 out of which 6 are Hilton Honors (marked in yellow). 428 is the total hotel capacity.

1. Manually calculate Revenue (Column s in snippet 1) by multiplying rooms available (column L in snippet 1) to Rate (column R in snippet 1).
2. Calculate sum of Rooms available (column L in snippet 1) & Revenue (column S in snippet 1). Rooms available = 48 & Revenue = 8857.98
3. In transient reservation (snippet 2), calculate the count of transient reservations i.e. 39 and sum of rate before deducting the night cost i.e. 6160.52.
4. Then, add group and transient revenue and rooms sold excluding Hilton Honor's i.e. 48(group rooms sold) + 33 (transient rooms sold) = 81 &

8857.98(group revenue) + 6160.52 (transient revenue) = 15,018.5.

5. Calculate ADR, by dividing rooms sold to revenue from point no. 4 i.e. 15018.5 / 81 = 185.41
6. Find % of total reservations / hotel capacity i.e 87/428 % = 20.32%. So this will be below 90% and would certainly fall into column "Low_Hotel_Occupancy_Percent" from criteria.
7. Find % Hilton Honors/ Hotel capacity i.e. 6/428 % = 1.40%. so the score falls between 0-5 %
8. This means, the corresponding value 0-5 % from column "Low_Hotel_Occupancy_Percent" is 55 %.
9. Calculate 55% of ADR (from point no. 5) i.e. 55% of 185.41 = 101.97
10. This would be the correct value (101.97) which will be seen for Honor SRP's

Points to note

1. To fetch the data from ratchet data set point to **Support -> Data Extraction Utility**. Check **Ratchet Data Sets** and click Save

2. In a condition wherein the reservations in the business insights does not match the reservations in the ratchet dataset, this is observed if we have missed some extracts to process. Parameter “**ratchet.differentialTransPopulation**” is set to **true**. While this is true reservations are populated differentially. Set this parameter to false and wait for the upcoming optimization. The anomaly between business insight and ratchet dataset would be resolved.
