HLTN/Handling Error for SAS Dataset Encoding Job

KH9J.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9K.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9M.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9N.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9P.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9Q.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9R.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9S.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9T.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9V.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9W.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9X.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9Y.gz;Hilton/ISTHI/rateplan/2024/05/08/230041446/0FZR28VCZKH9Z.gz;Hilton/ISTHI/rateplan/2024/0

The reason behind the failure :

When the LVO value for room type is not present then the fallback mechanism tries to find out the LVO value for room type configured as base room types for the master class in pricing configuration. If that room type has also zero capacity then the process does not find the LVO value and hence generates this error.

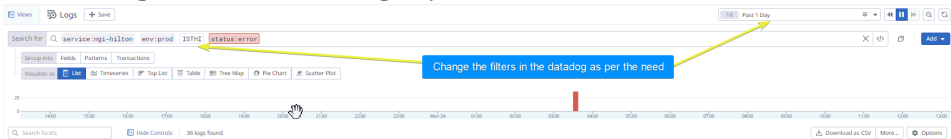

Different Scenarios with same error:

Scenario 1 – The Base room type configured for the Master class has zero capacity and hence there is no LVO values.

Scenario 2 – The Base room type configured for the Master class has non-zero capacity and still generates this error.

STEPS FOR INVESTIGATION:

1. Below is the link for Datadog to find out the room type code for which the LVO values are absenthttps://ideas.datadoghq.com/logs?query=service%3Angi-hilton%20env%3Aprod%20ISTHI%20status%3Aerror&agg_m=count&agg_m_source=base&agg_t=count&cols=core_host%2Ccore_service&fromUser=true&messageDisplay=inline&refresh_mode=sliding&storage=hot&stream_sort=desc&viz=stream&from_ts=1719128505398&to_ts=1719214905398&live=true
2. Change the filters like property Code, date-the time range, and status (error, warn, debug, info) in the datadog as per the need.

3. In the error, you will find out the room type code for which the LVO values are absent. Note down this room type code.

Event Attributes Trace 1 Metrics Processes

LOGGER NAME	THREAD NAME	ERROR KIND
com.ideas.ngi.hilton.inbound.service.nucleus.rateplan...	NucleusThreadExecutor-25	c.l.n.h.e.InboundProcessingException

Error

This issue is 6 months old (v. latest) - Last seen 10 minutes ago (v. latest) View in Error Tracking

Pretty Raw

```
c.l.n.h.e.InboundProcessingException LV0 is missing for room type code K1KCF1 and date 2024-05-10
```

The error indicates that the system is trying to find the LV0 values for Room type code K1KCF1 but are missing.

- Now run the query “Query to identify the issue for Hilton Inbound Data Retrieval” saved in CMA at the property level

Run SQL

Selected Query: **Query to identify the issue for Hilton Inbound Data Retrieval**

SFDC Case: **Get**

☒ Select One or More Chains ☐ Import Property Codes

Prod Instances:

Select Chains:

☒ Select Specific Hotel ☐ Import Property Codes

Select Property:

Selected Delimiter: ;

Query Description:

Query Set:

```
select AC.Accom_Class_Code, Ac.Master_Class, AT.Accom_Type_Code,
AT.Accom_Type_Capacity, CP.Accom_Class_ID, cp.Accom_Type_ID, CP.Is_Price_Excluded
from CP_Cfg_AC cp, accom_type AT, Accom_Class AC where
cp.Accom_Type_ID=AT.Accom_Type_ID and cp.Accom_Class_ID=AC.Accom_Class_ID
and AT.Accom_Type_Capacity=0 and AC.Master_Class=1
```

Query Parameters: **Run SQL** **Schedule SQL**

- If the query does not return any values/data. Escalate the issue to SPM L2>CSS>QA team.
- If the query returns the result. It will give you the name of the Room Type in the output. When this queries gives you the result, there is configuration problem that is not allow the system to get the LV0 value for the room type code received.
- Open the 2 tabs in GRO:
 - Rooms Configuration
 - Pricing configuration.

8. Look for the master class in the Rooms configuration.

9. Now, check the Base Room Type for the master class in the Pricing configuration and note down the Base Room Type for it.

10. Search this base room type in Rooms configuration. If the Base Room type also has zero capacity then the process does not find the LV0 value and hence generates this error.

11. Escalate this issue to the client.

12. Abandon the failures.

Subject Line: HLTN/<Property Code> – GRO – Processing Failure – RT is zero
capacity – <Date> <Month> <Year>

Hello GRO Support,
Greetings from IDEaS!

We are currently experiencing issues with retrieving Inbound Data for the following property:

Property Code: [Property Code]
Property Name: [Property Name]

The LV0 values are absent for room type code [Room Type Code for Datadog Error].

Upon investigation, we have found that the master class for [Property Code] under Rooms

Configuration is [Master Room Class Name]. The base room type [Room Type Name] for [Master Room Class Name] has a capacity of 0.

As a result, the room type [Room Type Code for Datadog Error] is unable to locate the LV0 value.

Could you please review this and update the configuration accordingly?

In case, you have any questions or concerns, please feel free to reach out
