Hilton Virtual Property failing to update property name under property Specific Configuration

It seems there are constraints with the way the property account numbers are assigned for virtual properties causing an issue with Hotel not being able to update names under property Specific Configuration with errors that may appears as follows .

Corrective measure – GO to installation screen – check account number that is configured. It may be of the nature 1111-1111 which is incorrect.

You should lookup the relevant value in salesforce and update the same for the property. Save the configuration and ask the client to retry saving the name.
